djmd@one.net writes:
>I love Yaesu radios, but something that they lack to elaborate on in
>their manuals is charging batteries. I have a question:

Well, they also include a complete radio circuit diagram with the
manual. Many things can be answered from looking at it that aren't
mentioned in the manual.

>Does the E-DC-5B cigarette lighter adapter charge the battery when the
>radio is on? And what about when it's off?

If I remember correctly (I don't have the manual or circuit schematic
here), the battery charger will charge the battery whenever power is
applied to the radio's power jack.

>I used to have an FT-530, and I always slipped the battery off and put
>the little cover on when using the adapter, which was pretty much
>always... so I didn't have to worry about erratic charging cycles and
>messing up my battery. But with the 50, you pretty much have to keep
>the battery on at all times (as far as I know) but I am a little
>worried that I am also putting charge back in to my battery.

You are charging the battery. For further proof, just set the sub-display
to monitor DC voltage. Check the battery voltage, plug in the power
cable for a while, unplug it, and see that the battery voltage has
increased. (Of course, while the cable is plugged in the voltage reads
about 12 V, so you can't actually watch the battery voltage change).

>I like to leave my radio on at night and APO after 30 minutes... but
>don't want to fry the nicad.

From the charging time quoted, the radio's internal charger puts out
a constant current of about 60 mA. This is a safe charging current
for any of the battery packs (all are 600 mAh or more). Of course,
charging them for days at this rate isn't the best thing.

If you do want to use your radio on external power for long periods,
here are a few possible solutions:

- stick a piece of electrical tape over the battery's charging contact.

- buy the FBA-15 dry battery pack. If used without batteries, it is
very light - it becomes a dummy back to pad the radio out to the
correct shap. Install alkaline batteries into it, and you've got
a spare or emergency battery. When external power is connected to
the radio, no power will be drawn from the alkaline batteries, but
no attempt is made to charge the pack either. If the power fails

the alkalines will take over supplying power.

- buy the FBA-15, mount it to a stand of some sort. Drill a hole in the pack, run in a wire, and connect the wire to the two power contacts on the pack. Connect to regulated 13.8 V power supply. Then when you want to use the FT-50 at home, you remove the battery and mount the radio onto the modified FBA-15 which provides both power and mechanical support. Advantages: no need to use the DC jack on the side of the radio, and you build a stand with a substantial base that won't fall over on your desk.

Dave

2. WARC Mod for IC-740

4. GP300 for Marine use (Help needed)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-01 00:00:00 UTC
From: majestic@nildram.co.uk
Message-ID: <33ba1f86.0@scooby.nildram.co.uk>
Source record: 171538

Greetings, If your a UK based Amateur or maybe a radio
supplier/programmer in the UK you might be able to help me.
I have 2 Motorola GP300 VHF handsets (8 but possibly 16 channels ?)
that I recently purchased at an auction, I am looking to get them
programmed with several marine band frequencies, channels 16, 67 & a
few other working & marina channels are all that will be required.
If you would be able to provide this service please get in contact
with me, just for your information, these radios are only going to be
used as backup handsets & in NO circumstances would be used as a
primary means of communication if the main VHF radio was functioning,

however they will be invaluable for use as a dedicated channel 16
monitor & marina operations radio.
PLEASE E-MAIL, SMS or PHONE me if you can help, many thanks in
advance.
Mike. (based near Bideford, Devon)

From: "Dave Burr" <dtburr@mcs.com>
Subject: 1000D or 1000MP?

I agree with lots of these points....

The '1000D is built like a tank and will run at 200W+ all day long and
barely break a sweat. It has a better receiver than the 'MP. , IMO, the
'1000D has the best receiver I have ever heard, bar none. Yaesu built
the
1000D as its entry into the "ultimate rig" category. They built the
'1000MP
as a radio that would appeal to the largest buying group of hams...those
who love bells and whistles. The DSP on the '1000MP is no better than an
outboard audio DSP. The DSP on transmit is a nightmare...you'll screw
around with it forever just to find ONE setting that sounds good. Any
idea
that you'll use the transmit DSP to "change the audio to suit the
conditions" is not borne out by fact. Just get on 75m at night and ask
around.

To the point about contesting and the rigs, I doubt that you'll find
many
of the big-time contesters using the '1000MP. Most of this group can
afford
the best and will not screw around with the MP. As time passes with the
MP
on the market, check out the survey in National Contest Journal to get a
feel for that. I agree that the MP would be good for DXpeditions due to
its
toy-like weight.

No doubt that the MP is a nice rig with some good features, looks good,
and
is a good value. But, like the IC-756 and *its* big splash (because of

the
"neat" features), it may be disappointing if you are somewhat discerning
and can afford better.

Dear Mr. Stedman;
The Garmin GPS II+ does have a NMEA 183 interface. I have used it
and
it works without a hitch.
The Garmin printed data sheet indicates that coordinates may be
displayed in Maidenhead in liu of Lat/Long. The manual indicates the
same. I have not used this capability.
The GPS II+ is a fine unit. Lowest price appears to be from
Shoreway
Marine 800-443-5408 @ 229.95.
Enjoy, Mac

Hi Bob,

The IC245SSB was the mobile version of the 211- same nightmare PLL.
There never was a service manual for the 245 so I wonder if there is one
for the 211.

The manual (I just bought one) claims there is an alternate battery type
holder that uses a *SINGLE* AA cell (Alkaline), with an integral voltage
doubler in the battery carrier. It's got very limited capacity (reduced
power & life) and can't be recharged in-place.

>to access the fixed repeater?
>
>Thanks, John

Hi, John

A basic crossaband-repeat dual-band mobile is all you need. In fact, I haven't see much in the way of accessories.

The biggest problem crossbanding into another repeater is the repeater's hang-time. A crossbander simply takes a signal from one band and repeats
it to the other band on a first-come first-repeated basis. And it won't stop until the signal it's hearing drops. And it's paying attention to the
repeaters output carrier -- it doesn't know the difference between a repeated mobile and the repeater's hang-time, so before you can talk back
via the crossband repeater, the main repeater has to drop. And some of them hold on a looooong time!

Two solutions:

The first -- just do a one-way crossband repeat, and monitor the repeater
directly with your HT. This requires an HT that will mute the audio on band "B" while you transmit on band "A". Many won't do that. If yours won't, you'll get feedback, unless you use an earphone.

The Kenwood 733 has a one-way crossband repeat function available. Most mobiles don't, but you can simply park the VHF receiver on an out-of-the-way channel, guard it with PL, and adjust your transmit "offset"
to put the transmitter on the repeater input.

The second -- get your repeater crew to put PL into the repeater transmitter that is only there when the repeater is receiving a signal, and
is off during hang-time. That's what we did here in Raleigh on 146.64, and

it's great for crossband repeat (and for the folks who complain that the repeater "talks" to much with it's voice ID announcements -- they don't have PL either, and so if you listen with PL decode, it's nice and quiet).

If this is confusing, write me back and I'll try to explain better.

You need to take a long look at the standard C510A ! Nice RADIO!It has a
keypad,more power without outside power source! I hope this helps!

I took my wife along when I purchased my VX-1R. I took it out to show it to her and her mouth dropped and said "You just paid $280 for THAT?!?" Well, I had to basically show her everything that it did and her response was "My pager is bigger than that". Oh, well...I doubt she'll ever get her ticket but I love her anyway :)

>What about receivers?

NASA Select is on GE2 and is C band. Any TVRO setup should
do to receive it. Down here in the middle of the footprint, a 6 foot
dish will do. Up where you are, a somewhat larger dish may be
needed. If you hunt around, you can get what you need for about
$200. Maybe less. I got a dish for free if I'd haul it away, and I
found a 60 degree LNB at Dayton for $5, and an old Sattek
receiver for another $5. So I did it for $10 (plus concrete and
sweat).

Source record: 171592

A friend of mine has bought a brandnew Icom IC 207 at the Dayton hamvention. It covers 440-450 MHz. As he wants to use it in Europe it has to be switched to 430-440 MHz. In Europe the 70cm band is only 10 MHz.

Does anybody know how to modify that radio ?

Please answer also via E-Mail

Bert DL9BBH

Put the VHF side of your radio in VFO mode, press function button followed by the VFO/MR button. Small AM should appear just below frequency display and just above and between the REV and RPT buttons. You are now in AM mode.

What's so funny is that there is really no such thing as a "Very simple"
circuit which could be classed as anything even approaching reliable.
Besides it is far cheaper to buy a kit from Veronica
http://www.legend.co.uk/~veronica/ and the reliability and performance of
these kits is second to none.
I would like to take this opportunity to remind you that operation of such
a device would infringe UK law and you could be liable to an unlimited fine
and/or up to two years imprisonment. Use caution..

Regards,
Andy.

>
> -- Jason
> baack@maine.eduJim; If you know what to look for it can be done very cheaply. Try to stay with the 900mhz block stuff (it works better) Try looking around the internet for some how to articles. Just your local shopper or pennysaver if you have one. In this area folks are just trying to get rid of the larger systems in lieu of the 18' dishes so complete systems can be had for not much if you take them down. I put mine together just for the same purpose you intend for a grand Total of $80.88 about 3 years ago. I do have a bit more in it now since I added an actuator and pole. The first system was a 60 degree LNA/LNB, a 6 foot dish and a uniden ust-5000 receiver. I traded a broken Ic-22a for the lnb and a mounting bracket. The dish came from the dayton hamfest and the rx was from a buddy who had aquired it in a junk trade at a hamfest. I was able to get nasa select with the dish on the ground propped up with some tomato stakes and an old snowblower. Its a fun project and remember todays High-tech is tomorrows land fill. 73 Denny AD3O

36. TS-940 Features question

Newsgroup: rec.radio.amateur.equipment

From: vbajaj@portal.stwing.upenn.edu
Message-ID: <5pbvrm$ok2@netnews.upenn.edu>
Source record: 171610

Hello,

I have no manual for my TS-940S and thus have several questions.

(1) How can I calibrate the display? There is a "cal" switch on the top panel, and the display is slightly off frequency.

(2) Is there a way to use the built-in tuner manually (i.e. with manual control over the inductor, capacitor, etc.)?

(3) Are there any interesting documented or undocumented power-on procedures or software modifications?

Yes, I will be getting a manual soon :)

Got one and so far I like it. It replaced the small Standard
dual-bander. I purchased it for a very small, portable scanner and
the fact that it transmits is a plus. I REALLY can't wait for the
computer software.

I've got a like new Yaesu FT-911 1.2Gig handheld... it comes with the soft case, battery pack, charger, rubber duck, instruction manual, and box. I'll also throw in a trick little beam antenna that snaps directly on to the BNC of the handy, and supplies 10db of gain. I believe I paid $40 for the antenna. The rig is 1W nominal out, and has approximately 50 memories.

HRO sells these new still... for $470. I've used it once, to try the band. Unfortunately, there are no local 1.2 G repeaters to my house, so... I'm getting rid of it. I'm asking $400.

Thanks, and 73,
Bill Childers

I've had nothing but GREAT service from AES, year after year. Seems like
you came across an isolated incident. Call someone high up there, I'm sure
they'll straighten it out. Why would AES need to bring your order to the
Post Office? Doesn't everything efficiently leave there via UPS?

Yep, they do draw power when off. Probably a cost tradeoff.
But don't worry about it. At that rate, it will run down a 1200 mAH
battery in 5454 hours. The battery will self-discharge itself
a LOT faster than that. If you're gonna store it for a half a year,
take the battery off.

59. Extended Transmit Ic-W32a mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-01 00:00:00 UTC
From: ldkirby@freenet.columbus.oh.us
Message-ID: <5pcjmo$hep@login.freenet.columbus.oh.us>
Source record: 171633

The 9a manual is wrong and correct. If you look at the next page (The 1Za I think) you will see the same identical note about adding D23 this is a typo on the W32a page. Follow the note about removing D523 and you should get the results you need. I did this mod after hours of trying to find a keyboard mod to no avail. When I did the mod I got additional "BANDS" as well. However when my friend did his he got the extended X-mit but not the additional "Bands". Are serial #s are only 4 digits diffrent. So perhaps there is both a hardware and a keyboard mod.

>to access the fixed repeater?

Most of today's dual band mobile rigs let you do this. Some do it
more convienently than others. My Alinco rigs, a 570 and a 590,
both let you do it, and my FT8500 does too. The 570 is easiest,
with a slide switch to put it in and out of crossbanding. The others
require arcane key presses or menu selections. But once they
are in the mode, they obey the normal channel memory programming,
IE if you have a memory channel configured to operate with a given
repeater with a given CTCSS, they'll use that. A few rigs my restrict
you to using the same CTCSS on both bands, others don't. Some
rigs leave the local mike hot when crossbanding. Generally, you'll
want to avoid these rigs. And some rigs let you control them remotely
by touchtone, IE you can change frequencies remotely. That can
be useful in some cases, but you really want some feedback to let
you know that they got your command correctly. Otherwise, you
may wind up crossbanding somewhere you didn't intend.

Shop around, read the manuals, try before you buy if you can.

In rec.radio.amateur.equipment you write:

>Can anyone explain the sequence the Ten Tec Omni *, Corsair, Paragon, etc.
>were produced and the CW performance ranking of each ?

Hi Alan:

The Corsair I and II had the same receiver strip, dual
conversion, first IF at 9 MHz, second IF at 6.3 MHz. They had
one 2.4 kHz crystal filter in the first IF, no choices to add
there. The choices came at the second IF, 6.3 MHz. There is another
2.4 kHz SSB filter stock in that IF. You may also add optional
filters in that IF, the 288 SSB filter or the 285, 282 CW filters

The OMNI V and VI have the same dual conversion design, but they
add the ability to place one optional filter in the first IF,
cascaded with the stock filter there, the NAR filter position.
That enables you to put the 217, 218 or 219 in there for added
selectivity before the 6.3 MHz IF, with its 3 optional filters.

The Corsair I was the first of the dual conversion designs, it came
after the OMNI-D series radios, which were single conversion. After
the Corsair, the OMNI V and the Paragon were introduced (I think the
Paragon came more closely to the OMNI VI timeperiod, but I am not
sure). The Paragon II was short lived, and was recently conceived
and dropped as I recall.

I don't know how to "rank" these rigs for CW. They all exhibit
tradeoffs that some would like and some might not. I have the
Corsair II and the OMNI VI and love them both. For basic
performance I believe the Corsair competes favorably, and the QSK
is just fine on both for the speeds I go....25 or 30 wpm max.
Some call me a wimp :-) .

I also use the rigs on SSB and they work fine there too. Hope this
helps. Correct me if I am wrong on anything!

There was Never a service manual printed for the IC-211 or IC-245
Can't provide what is not in print.

You likely have solder feed through troubles, you will need to renew
the solder feed throughs where a circuit drops through the board to
the other side.

ICOM uses the owners manual and schematic for repairs on the IC-211

Contact Scott Malcom at 509-732-8883, he is good and reasonable
priced for these older ICOM radios.

What it is telling you is that there is (approximately) no clock
coming in on the clock probe, and that after waiting a good while,
the analyzer hardware had not yet received a clock pulse from the
'equipment under test', which you probably had not connected.
You need to use some external source of clock pulses in this mode.

Hi Greg,

They do make a Battery Holder.. It is called the FBA-22.. and it holds (1) AA sized battery. It's kind of cool design since this holder takes the battery voltage of 1.5V and doubles it to 3V. Just think that little radio works off (1) AA battery !!

Date: 1997-07-01 00:00:00 UTC
From: donlise <donlise@goodnet.com>
Message-ID: <01bc85ec$1d840a60$c3fdcccf@default>
Source record: 171662

I measured my FT-50 current draw with the power off by connecting to the battery posts of the radio with a power supply, through an ammeter. It draws 220uA. Does anyone know why it would draw current with the power off? I thought it used EEPROMs for data storage. Has anyone else measure your radio like this? Is this normal?

I suppose it could use some power to operate the power switch.

Please e-mail me if your radio draws power while off, too.

thanks,
73

I have a 706 MK II and have the narrow SSB filter and the 250 Hz CW
filter. I would highly recommend the narrow SSB filter- which works very
well. I have not totally decided about the 250 Hz filter. It rings a
little, but in general works pretty well. It would be nice to try both
the 250, 350 , and 500 filters and then decide. They are very easy to
install.

88. FS/T: Yaesu filters & accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-01 00:00:00 UTC
From: Rich <k1cc@mindspring.com>
Message-ID: <33B901D7.713FE76F@mindspring.com>
Source record: 171672
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have the following Yaesu filters and accessories for sale,
all are new (except as marked) in original boxes and have
never been installed.

Yaesu DVS-2 $195
FT-1000, 1000MP
Yaesu TCXO-2 $135 FT-990

Yaesu YF-114CN (XF-B unit)
(8.2M - 250 Hz) (new) $120
FT-1000MP
Yaesu XF-110C (same as YF-100) $120 FT-890,900
Yaesu XF-110C (same as YF-100) (used) $105 FT-890,900
Yaesu XF-455MC $120 FT-1000,
726R
Yaesu XF-109C $100
FT-990/DC
Yaesu YF-110C (XF-E unit) (500 Hz) $120 FT-1000,FRG-100B
Yaesu XF-D unit (455K SSB-N) $120 FT-1000
Yaesu MD-1C8 desk microphone $100 FT-1000, FT-990,

FT-840, FT-736R

I am looking for the following accessories for an FT-1000
which I would like to trade for any of the above:

BPF-1 bandpass filter
TCXO-1
XF-C 2.4 kHz SSB filter for 455
YF-110CN (XF-F unit) (250 Hz)

Message-ID: <33B90D3D.299C@popd.ix.netcom.com>
Source record: 171676

Can you install and use a narrow SSB filter and a CW filter? Brochure suggests you can have one narrow filter (CW or SSB) and a wide filter for SSB. But that seems too dumb to be true!

From your msg it sounds like you CAN have and use both a narrow SSB and a narrow CW filter. BTW ... I'm partial to 500 Hz filters. What's witht the 350 Hz CW/Digital filter? Cheaper at AES than the others...pooorer skirts?

Phil

A beat-up 6 feet dish should work well with any
C band receiver. NASA Select is on a new bird with a
good signal.

You should be able to find an old receiver someone
has replaced, and get it cheap.

Good Luck,
Jim

I ordered one small accessory through AES (Amateur Electronic Supply).

It took them three days to respond to my order. I didn't receive
the product. I called the office a week later. They told me that
they placed the order and they needed someone to go to the post
office.
Now, they tell me that they don't have any records of my order.
I have received nothing. It's two weeks now.
Beware of AES.

By the way, I purchased a radio through Radio City and I am happy with
their service.

Source record: 171436

Hello

Anyone out there installed a mobile rig in 1995-1997 vintage Ford Windstar? I am trying to find an easy way to fish the 8 gauge wire pair from the engine compartment. My usual trick of feeding it from the battery, between the inner and outer fenders, and into the passenger compartment through the area just underneath the dash and in front of the door (the kick plate) is not easy. The fuse box, hood release assembly and other goodies are on the drivers side kick plate. The passenger kick plate is better but this will make the power cable run to long.

Once inside the van getting to the installation point is easy as Ford has provided excellent wiring channels within the passenger compartment.

For interest, I will be drawing approximately 20-25 Amps on tranx

Any suggestions would be appreciated

Jeff:

The IC-706 is a real great way to go. I like having the remote head
which I have mounted under my stereo, and the rig is stashed under the
passenger seat with room to spare. I was a bit concerned about all the
menu driven buttons for a mobile, but after playing with the rig one
vacation, I got the hang of it. I'm selling my FT-990 base rig and
keeping the IC-706!

Dear Internet user,

If you are paying for your Internet services then
you have not heard about 1stFamily. We have
a marketing method that guarantees you will not
have to pay one dollar to access the Internet.

* You will never again have a busy signal !

* You will always have the fastest access you have ever seen !

* Residual income for the rest of your life !

* and much much more.

This opportunity is for YOU to take advantage of !

Do you wish to continue the rest of your life paying
$19.95/month to access the Internet when you can
access it for free with speed and reliability that exceeds
the other competitors ??? We did not think so. That
is why our company is the best and fastest growing
of it's kind and will soon compete with AT&T and MCI
and all the big companies in providing Internet Service.

For complete information please mailto:sameer@1stfamily.com
and type "More Info" in the subject box.

You will receive our webpage address where you can get enrolled in
seconds !!

Jeff:

Given the type of car I would recommend remote mounting. Control head on the dash, rig body in the trunk or under seat. This has many advantages: theft resistance (in trunk!), leads to antennas are short (as recommended by many auto manufacturers), but has problems like getting suitable sized power cable to the radio.

For power, most of the HF rigs you listed draw on the order of 20-25 amps on transmit. Fore this reason I recommend using 8 or 10 gauge red/black zip cord wire. Connected directly at the battery terminals, and both lines fused for about 25-30 amps, directly after the battery connection and again before the radio. Make sure that you ground the radio from is ground connection via the shortest possible route.

As for a radio recommendation. I have an IC-706 presently undergoing warranty repair (a long story!). Before the failure it worked very well. Its low power on 2 meters (10 watts) and bad receiver split settings method detracted from it. Reducing power and using the SWR metter to tune an adjustable antenna was not easy However, I would still buy it again. Its remoting components were ok, not as good as say the Kenwood TM-733A dual band FM rig, but got the job done.

I have no experience with the other rigs.

Have you made any selection for an HF antenna? I would recommend either the Outbacker or High Sierra. The Outbacker provides multiband coverage , and is trunk lid mountable in some versions. The High Sierra is a "screwdriver" HF Vertical. Besides is size (12 - 14 feet fully extended) and its very sharp-Q (both good and bad) it is a fantastic vertical.

Enough said. Hope this helps.

Source record: 171442

I have for sale three old ICOM handhelds:

IC - 2AT (2 meters)
IC - 3AT (220, before we lost half the band)
IC - 4AT (450)

and one not so old ICOM handheld:
ICOM micro-AT (2 meters)

These are the original ICOM handhelds with the thumbwheel switches.
Want to sell all four as a package along with a couple of wall chargers,
drop-in charger, extra batteries, AA battery case, external speaker
mike, and some other odds and ends. All rigs work just fine except
that some of the old NiCad batteries have given up. You can fix those
by opening the case (four screws), pulling out the batteries, and
replacing them with cordless phone batteries from Radio Shack.

The whole box of stuff goes for $250, firm.

e-mail me at:

I sold my FT-50R after owning it for less than six months because my
bride of 31 years looked at my HT shelf and saw antennas from eight
(that's right, EIGHT) HTs sticking up. I had to decide which of them
would clear out quick and easy so I started by selling the newest ones.
I am now permitted to keep two FT-470s and an FT-11.

Of course, a simple solution is to stop screwing around with out-of-band mods.

I didn't believe Gary Fiber when he said the same thing as You. Sorry
for your problems. I think the Newsgroup will appreciate it. I guess I
will have to believe Gary about the Expanded mod from 200 HZ to 200 MHZ
could blow the TX Finals due to Occilation.

I have a C508 and use nicads on it quite successfully. While the voltage
drop does cause a slight drop in RF, relatively speaking, it is
insignificant. I took the radio with new alkaline batteries to a local
Motorola Communications shop and measured it on the Motorola Service
monitor there. I think the power out was something close to the 270 MW
as spec'ed. When I put fresh Nicads in, the power out, dropped about 30
MW to 250 MW. I use Radio Shack hi-capacity cells (850mah) and the drop
in charger. Only thing you need to do to make a generic nicad work with
this unit is peel off about 1/4-3/8" of the outer wrapper of the battery
exposing the metal casing on the battery closest to the bottom of the
radio.

> kc5yqs@qsl.net

I have used one for some time now. Recently, it was a great help in putting up a 75 foot tower with a 2 meter/70 cm./6meter omni, a 10 meter omni, a 10 element 2 meter horizontal, a 70 cm six element horizontal, and a 10-15-20 six element TH-6 tri-bander. All of the antennas except the 70 cm.'s were mounted to the mast and tuned using the MFJ 259 while still on the ground. It saved a lot of time, and helped in determining the optimum location for each antenna.

After the mast was installed in the tower, and it was run up to height, all of the antennas either held their match or improved slightly. The MFJ 259 made this a simple "one-shot" install.

Overall, the unit performed well, it has held up through several "loans", and one field day with no problems. The frequency counter counter is pretty good too. It compares within around 50 cycles with my HP bench counter.

Since I use it mostly in the field, I run it using batteries. Using quality alkalines, the battery life seems to be very good. I have had mine for about 6 months, and have used it a lot. So far, I'm still using the original set of batteries.

Regarding the dip meter functions, I have not used it in this mode, so I cannot comment.

My only complaint is that its' upper limit is 170 mhz. You need to buy another unit to work with uhf antennas. It would be nice if one device would cover all of the needed bands.

It's not perfect, but for the price, I think it should be standard equipment in most shacks.

By the way, I got mine from HRO in Anaheim for $199.95...

73's,

Dan K Nelson, KF6KNB

118. ICOM 765 tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-02 00:00:00 UTC
From: David Heinsohn <heinsohn@swbell.net>
Message-ID: <33BB458E.453F@swbell.net>
Source record: 171452

I curious problem seems to have developed in my IC-765. The auto ant
tuner tunes but never "locks" onto the minimum SWR. While observing
the SWR meter, one can see it dip to say 1:1, but the tuner won't stop
at that point. It finally errors out. Has anyone ever experienced this
? problem seems to be on all bands/ants.
Dave

This is one of the questions I put to the Yaesu folks at Dayton
before I bought one. They claimed the newer ones did not have
this problem. I took it back to my hotel the first night and
checked it out immediately on simplex. Sure enough there was
no noise problem. I don't know whether I happened to get
a good one or whether the Yaesu guy was correct.

Subject: 2M antenna ?

Hi there
The best way to improve wideband reception would be to use a
discone
antenna from Radio Shack. These are very wideband.If you find rg8 coax
too
big, try rg8 foam wich is smaller. I tried my ft-50 with an outdoor
antenna
and it sure makes a lot of difference. Watch out for intermod, ht's are
very susceptible to that.

From: "Chuck O'Neal" <CONEAL@microtouch.com>
Subject: FS: 160 - 10M Hi Power AM transmitter

Hi Folks,

I have available for sale an extremely well built high power AM
transmitter

that covers 160 thru 10 meters. Final is a 4CX1500A modulated by a pair
of
3CX1200A7's using 5KW broadcast iron. Fully metered, vacuum variables
with
turns counters, extra final tube, all machining professionally done.
Plate
power supply not included, needs 3500VDC at up to 1.5 amps, depending on
the desired output power. All other supplies built in. Requires about
a
total of 26" of 19" rack space, plus room for the modulation
transformer,
reactor and plate supply. It can run very conservativly at 375 watts
out...up to....well look up the final tube. Priced at around $1.00 a
watt
at full output. Due to weight it is pick up only in Bolton, MA. 30
miles
west of Boston.

Need room for the next rig under construction.

From: "Robert Chisholm" <chisholm@spec.com>
Subject: FT-2400 Display Freaks Out

Tom,
I believe that the 2400 uses a capacitor to maintain its memories when

the
power is off. I do not know how long the cap with keeps the memory
"sane"
but I do know that after some time the radio when powered up will
display
this condition because the cap was out of juice and was unable to keep
the
memory charged. If this occurs after your wife has not driven the car
for a
while this is probably the cause. If you wife drive the car daily it
could
be that the cap is bad and is not keeping the memory as long as the
factory
designed it to. I again do not know what the time is that the memory
should
be maintained. I keep my on hot power all the time and of course don't
have
this problem. I am not sure if by "freaking out" this is what you mean
but
I have seen this condition I described happen if I keep the radio
unplugged.
If it is a spike then maybe a filter like a cap across the DC power
would
help. Of course if you have a scope you could look at the power and
trigger
on a spike. That would help you select a cap of the correct size. Good
luck
I would try a 50V 68uf cap first if I guessing.

I never got mine to be stable on battery power, but I did't
try seriously. One approach that should work is to use
two batteries, one on each power input. That will insulate
the main electronics from the power transistors and the
hugh current and voltage swing that they impose on the

main electronics. No mods, give it a try.

You may find some help in an old 73 Mag, from June 1980. There was an article in there with how to tune it up and some mods.

ICOM will still service it I believe. I have one that is off on the lower VCO, so it has to go in. The power supply also went bad a few years ago. It appears that the caps are drying out after all the years and they take a few things with them when they fail.

Good luck,

Rick

Mark Stonier <mark.stonier@virgin.net> wrote:

>does anybody know of mods to IC-w32e, to make it full band coverage etc
>etc.

To turn on Crossband repeat, set the VHF and UHF frequencies you want,
and
"lock" the radio by holding the CALL (LOCK) button for 2 seconds. Then
turn it OFF.

Then, turn power OF while holding the SQUELCH button (on the side of the
radio, above the Push-to-talk button), and the MAIN button and the BAND
button all at the same time. Then see your doctor about your sprained
fingers.

To stop crossband repeat, hold down the CALL (LOCK) button for 2 seconds
again. But, if the crossband repeat is in use, it won't go off. The
escape hatch is to hold down the SQUELCH button again and then CALL
(LOCK).

That works for sure. I think you can open up the full receive coverage
by
turning on the radio while holding MAIN and BAND (but not SQUELCH), but
it's been a while since I've done that.

You have to add some parts to be able to transmit out-of-band, and I
can't
help you with that.

Subject: Ten Tec Chronology

In rec.radio.amateur.equipment you write:

>Can anyone explain the sequence the Ten Tec Omni *, Corsair, Paragon,
etc.
>were produced and the CW performance ranking of each ?

Hi Alan:

The Corsair I and II had the same receiver strip, dual
conversion, first IF at 9 MHz, second IF at 6.3 MHz. They had
one 2.4 kHz crystal filter in the first IF, no choices to add

there. The choices came at the second IF, 6.3 MHz. There is another 2.4 kHz SSB filter stock in that IF. You may also add optional filters in that IF, the 288 SSB filter or the 285, 282 CW filters

The OMNI V and VI have the same dual conversion design, but they add the ability to place one optional filter in the first IF, cascaded with the stock filter there, the NAR filter position. That enables you to put the 217, 218 or 219 in there for added selectivity before the 6.3 MHz IF, with its 3 optional filters.

The Corsair I was the first of the dual conversion designs, it came after the OMNI-D series radios, which were single conversion. After the Corsair, the OMNI V and the Paragon were introduced (I think the Paragon came more closely to the OMNI VI timeperiod, but I am not sure). The Paragon II was short lived, and was recently conceived and dropped as I recall.

I don't know how to "rank" these rigs for CW. They all exhibit tradeoffs that some would like and some might not. I have the Corsair II and the OMNI VI and love them both. For basic performance I believe the Corsair competes favorably, and the QSK is just fine on both for the speeds I go....25 or 30 wpm max. Some call me a wimp :-) .

I also use the rigs on SSB and they work fine there too. Hope this helps. Correct me if I am wrong on anything!

>VHF.

James,
I really like the C510 also, but I guess I do not see why the VX-1R and the C510 are compared as "similar" radios. I would see a better comparison as the C508A versus the VX-1R. The size is similar, although the Yaesu is smaller. The Yaesu has more receive range (and modes) and DTMF capability. The C508A has crossband duplex (not repeat) operation. Overall, I prefer the Yaesu for a "shirt pocket" radio. My brother-in-law recently bought one, and I plan to, too.

On the C510A, I bought one of those for travel and now use it mostly as my everyday radio. It has a wealth of features, as you know, and gives respectable power with the convenience of AA's. I do not see it as competition for the VX-1R, or vice-versa. By the way, the case for the Standard is VERY nice. You should check it out if you have not already.

Anyway, in my opinion, both are great radios for very different purposes.

If you get those mods, I'd appreciate seeing them. I have been trying for some time to et them, and will pass them along to you if I am ever successful.

regards, Don (KE4KYO)

130. Need opinions on Dual Band base station verticals

I'm in the market for a dualband base station antenna. It will be mounted in an attic space and needs to have an SO-239 connector. I perused the AES catalog and came up with the following models:

Diamond X-200 or X-300
Cushcraft AR-270B
Comet GP-6 or GP-3

I'd appreciate any and all comments on the performance of these models. Thanks in advance!

Control tower radio traffic is notoriously difficult to receive at any distance from the airport, while on the ground. Tower, as opposed to approach, departure, and enroute, radio traffic is typically limited to relatively short ranges, and all of the tower's contacts are either in the air, or on the airport proper. Their radio installation reflects this.

Yes, I good antenna on the roof will probably do wonders to improve things for you. I'd recommend a dual-band antenna, instead of a two-meter, so you can use all the capabilities of your FT-50.

Hi David.

I just bought one of these. "Tastes great, less filling."

Sorry about the one-liner. I've been very pleased with the radio.

On the plus side, it has just about every bell/whistle you could want in a hand-held. It's simplicity itself to program. It's small, fits well in the hand or the back pocket, and I like the illuminated keypad. It's got enough power to hit my favorite repeater from just about anywhere. You can set a DTMF tone delay for slow repeaters. I like the 1.5 hour desktop charger. The pre-programmed and labeled NOAA weather memories (there are ten) are a nice touch. A one-key (hit and hold the "squelch") shift to monitor the input freq is great. (There is no "reverse" button.) Extended receive works very well. The "guide" function, believe it or not, can be helpful if you forget something. Much more so than the similar feature on the FT-51H (I don't own any Kenwood gear, so I wouldn't know about that).

On the negative side: not much. Cost, I suppose (but when isn't that a negative feature? You want the toys, you gotta spend the dough). Battery packs are tres expensive. The BP-119 desktop charger (not an option, in my opinion -- the standard wall charger takes 15 hours to charge a battery) is tres expensive. And while we're at it, you can't run the radio from an external power source unless you either remove the battery or (buy and) use an empty AA-battery case.

This is a feature I really enjoyed about my HTX-202. I liked being able to plug the wall-charger into the top and leaving the radio on all day (but don't transmit this way unless you like poorly filtered hum in your transmit audio). I can't justify spending a couple grand for a full-sized but _significantly_ flawed radio like the IC-821h (also, I typically only operate FM on the VHF/UHF freqs and don't have an interest in EME or satellite stuff right now) and don't want _another_ power supply on my bench for a mobile rig. I do like to have the rig on during the day, though -- so I just burn batteries...

Sending DTMF memories could be a little smoother. You have to go through a couple of steps to activate the memory first. It's easier to enter the DTMF strings manually if you can remember them. This is where a function key might have been useful, I guess. But I suppose that's the trade-off

for not having one. (Heh, heh. Or is that "Hi Hi"?) At this point, I only use them for storing autopatch codes for repeaters I seldom use.

The manual could be a little better. QST's comment about the info for setting subaudible freqs in one place and the info for _activating_ them being in two different sections is right on.

On the whole, I like the radio bunches. I debated seriously about purchasing the FT-50R, but haven't been disappointed. (BTW -- check pricing through HRO. The W32A looks like it's more expensive than the FT-50R on paper, but isn't. Also, while the W32A doesn't receive all the way down into FM broadcast, the extended receive is almost as extended as the FT-50R -- Icom just isn't public about it. Cell is blocked, obviously, but who cares...) FWIW, I owned a FT-51H for about 2 months and hated it.

Enjoy your shopping, and good luck.

Bob,
I saw one of the mini HT's at Dayton. REALLY cool. I have
realitives that had a booth at Dayton, and they said that the yaesu guy
had like been running the HT for like 3 months on that bettery!!! Also,
if you care, it will get cellular. Not out of the box, but you can modify
it (I know this because 1, I asked the guy, and 2, the prototype at
Dayton WAS recieving cell.

The HTX-242 was NOT made by ADI. It was made by Maxon Communications in
Korea. The HTX-204 is the only radio that Radio Shack has carried that
ADI Communications manufactured. Al of the other RS amateur gear has
been made by Maxon.

My 2 cents.. Stay away from the CushCRAP! Both the Diamond and the Comet
are good. I use a Diamond X-500 and X-200 for packet, both work very well!
I have the X-500 at 60 feet for packet on 2m and 70cm. and the X-200 at 30
feet for packet on 70cm and voice on 2m.
The X-500 has been up for 4 years with Belden 9913 cable, SWR is the same
as the day it went up. X-200 3 years, same thing. Both are on the air 24/7
in BBS operation.
The Comet looks like a copy of the Diamond so I would expect the same from
one of them.

>selects the correct charging voltage for the FNB-40 (6V) and FNB-41
>(9.6V) Batteries. So no need to have 2 separate wall chargers !!

The charging circuit built into the radio is *not* a "smart charger";
it has no ability to sense the type of battery or the end of charging.
It *is* a constant-current source, so it supplies the same charging
current whether the battery voltage is currently 5 V (FNB-40 discharged)
or 10 V (FNB-41 near full charge). In that sense it's smarter than a
resistor.

But it can't tell that a higher-capacity pack is installed, so the
FNB-42 takes longer to charge.

The CA-15 charging stand also has a constant-current source in it,
but it puts out somewhat more current so the batteries charge faster.
Still the same current for all battery types, though.

The NC-50 is the only true smart charger that Yaesu sells for the
FT-50.

I read that resetting the radio will set the offset to 0KHz, reset the offset and try it again. set 600 KHz and 5 MHz and see if it works. There maybe another "flag" that has to be reset, can't find the printout! Maybe " auto-offset enable" (could it be that easy)...
Good luck!

From: Jeff Kilgore <kilgore@tivoli.com>
Message-ID: <33BA7B84.18CC@tivoli.com>
Source record: 171506

I am looking for an HF mobile for my new car, and am interested
in any recommendations/opinions/warnings on the current generation
of HF mobile rigs. I am particularly interested in comments on
the Kenwood TS-50, Icom IC-706, and the Alinco DX-70T/HT. I
don't have a lot of room for a rig (it will be in a Camaro Z28),
so space is a definite consideration. Any mounting/installation
tips are also welcome.

73,
Jeff Kilgore, KC1MK

152. Re: Standard C510A Power out???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-02 00:00:00 UTC
From: miker <mreiney@hevanet.com>
Message-ID: <33BA9853.425E@hevanet.com>
Source record: 171508

Has anyone measured the power output of the C510 at 3.6 volts?
That's what you get over most of the life of three NiCds.
My C508 puts out 270mW on 3.0V, but only 60mW on 2.4V (that's right
sixty). Bottom line
is that it's practically useless on NiCd batteries.
I confronted the Standard Rep at a convention. I got a lot of
double-talk,
but never a direct answer to my question.

Two Questions:
1) Is mine the only C508 with this problem? What have you measured?
2) Does the C510 have the same problem?
I guess that was three questions....

153. FS: 160 - 10M Hi Power AM transmitter

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-02 00:00:00 UTC
From: Chuck O'Neal <CONEAL@microtouch.com>
Message-ID: <01bc8717$82221300$f7512ec0@coneal>
Source record: 171509

Hi Folks,

I have available for sale an extremely well built high power AM transmitter that covers 160 thru 10 meters. Final is a 4CX1500A modulated by a pair of 3CX1200A7's using 5KW broadcast iron. Fully metered, vacuum variables with turns counters, extra final tube, all machining professionally done. Plate power supply not included, needs 3500VDC at up to 1.5 amps, depending on the desired output power. All other supplies built in. Requires about a total of 26" of 19" rack space, plus room for the modulation transformer, reactor and plate supply. It can run very conservativly at 375 watts out...up to....well look up the final tube. Priced at around $1.00 a watt at full output. Due to weight it is pick up only in Bolton, MA. 30 miles west of Boston.

Need room for the next rig under construction.

Chuck...K1KW

You may find some help in an old 73 Mag, from June 1980. There was an
article in there with how to tune it up and some mods.

ICOM will still service it I believe. I have one that is off on the
lower VCO, so it has to go in. The power supply also went bad a few
years ago. It appears that the caps are drying out after all the years
and they take a few things with them when they fail.

Good luck,

Rick

Should have mentioned that the software is pointed to BY Kenwood as:
http://www.acsys.com under the name of EZ Clone. Sound good but I would
rather have someone that has used it comment.

Sure wish they left the clone (and mute) features in this radio... >:

Last week I posted a thread about my Outbacker Perth problems.
This week I fixed it! :-) Sorry Terlin! :-/

The ball mound had a 3ft coax "pigtail" with a PL259 connector. I used a "barrel" coupling and another 6ft piece of coax to get to the front of the minivan.

I remember last winter that the connector was hanging out the rear hatch and may have been that way for several weeks. Aparently water got into the connector and corroded the copper braid. The PL259 had an open ground. The corrosion on the braid was so bad that it was completely severed from the RG79 reducer. I was using RG8X

After replacing the coax and connector the antenna works fine on 20 and 17 meters. I did have some problem getting a low SWR on 40 meters. It was running a 2 to 1 swr but the antenna tuner solved that problem.

Hmmm, I guess because the radio was only slightly taller than ONE cell?
Take a look at the radio and it should be obvious.

>I am into homebrew antenna work and will probably continue in this
>effort for some time. Is the MFJ-259 antenna analyzer worth buying
>new for $219 from AES?

I have one and use it on most of the antenna installations I do. (I do
commercial two-way installations part-time). Also, I know the local
Motoroal two-way maintenance shop has one.

>
>If you have one, are you happy with it?

I initially purchased the MFJ249 (which didn't have the resistance meter)
but bought the upgrade kit at Dayton.

>Is it rugged enough?

Seems to be. Havn't had an problems with it.

>Any complaints about it, what could they have added to make it better?

Only complaint I have was with the upgrade kit. There is a 3 conductor
plug-in wire which was improperly wired at the factory. MFJ did not
provide any type of schematic with the unit, but I was able to trouble
shoot the problem and it works fine now.

>How well does the dip meter addapter work?.

I have not used mine as a dip meter.

>I am seriously considering this purchase, please give me any input you
>feel relevant.
>
I use mine on a fairly regular basis and am pleased with it. I recently
loaned it to a friend of mine who is a professional two-way technician
who needed it to install an NDB antenna on his aircraft. He said it was
a GREAT benifit in installing and aligning the antenna. The antenna
works on about 75 Mhz and he said it would have taken him quite a bit
longer to peak the antenna without the MFJ analyzer.

I also have an AEA analyzer that covers VHF and UHF and am pleased with
it also.

I have 2-32mb EDO simms that are new but surplus to my needs right now.
I've seen them sell for between $200 and $260 but I'm willing to take $175
a piece or trade for comperable value (or cash and trade).

Things I am looking for: 6 meter HT (azden), Newer HF rig like a Kenwood
TS-690s, Motorolla VHF (both low or high) and UHF gear (prefer mitrek),
and a pro-43

I also have for sale or trade: A Kenwood KSC-14 dual cup rapid charger,
new. $65 and a Kenwood TS-440SAT with all the filters and goodies $850 or
best offer.

From: mai@iquest.net
Message-ID: <5pei8i$2k8_001@news.iquest.net>
Source record: 171524

I've noted a display problem in many IC735's, in that the display is off one tenth (0.1). Checking the manual revels no specific adjustment. This isn't unique to one 735 - this is on three that I know of, and other owners have stated a like condition exists on their 735's.

I emailed an inquiry to Icom, but never received a reply (shock). Thus, I'm asking those within the group to comment and/or point towards the light on this. Any help greatly appreciated!

Bests,

Patrick

I've had two of these rigs and both were the same. Good sensitivity, bad stability (drift), bad selectivity. I think they are overpriced for a "CB" quality radio. They did seem to be rugged. If you get one cheap they do the job. Tom

I like my IC-706 (early model) very much. Since I regard
2M as a must in my car, the idea of one radio rather than
two was very appealing. The remote faceplate greatly eases
mounting problems; my radio is under my seat.

176. FS: Yaesu FT-890AT + Base/Mobile Accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-02 00:00:00 UTC
From: Michael Conner <mconner2@utk.edu>
Message-ID: <33BAE9A0.6269@utk.edu>
Source record: 171532
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur,rec.ham-radio.swap

FOR SALE: Almost everything needed for base and mobile operations!

YAESU FT-890AT in very good condition. Has built-in antenna tuner (great for mobile use), built-in cw keyer, 100 Watts output, general coverage receiver, and all-mode transmitter. Comes with hand-held mic and two (2) DC power cords (1 for mobile, 1 for base). Still have original box and owner's manual. I always found this rig to have a really great receiver.

Also for sale:

YAESU YS-60 SWR + Power meter (matching color to 890)
ASTRON RS-50M (with meters) (barely used)
BENCHER BY-1 Keyer (barely used)
HUSTLER Mobile resonators for:
80, 75, 40, 30, 20, 17, 15, 12 and 10 meters and two masts - one stainless steel and other is fiberglass covered.
Also have a mast mount for base use and a spring for mobile use.
(all resonators in very good condition and worked well for mobile and base!)

AND I'll throw in a 75' length of Belden 9913 coax (no connectors).

Prices dependent on who pays shipping, but figuring:

FT-890AT $750
YS-60 $ 70
RS-50M $175
BY-1 $ 60
Hustler $155 for all including masts.

Original purchase value of this equipment was well over $1,800.

Would prefer to sell entire package, but will break up and sell pieces separately (except Hustler antenna equipment).

Am selling because work hours are too long and I don't travel much any more and the cash would be useful.

Please e-mail me if you need further details, or call in the afternoons at my work:
(423) 974-0123.

Thank you!

Date: 1997-07-02 00:00:00 UTC
From: Peter Shintani <shintani@tv.sony.co.jp>
Message-ID: <5peppv$13p@oskgw.osk.sony.co.jp>
Source record: 171534

Hi:
I learnt the hard way. I bought a Japanese market model 706.
Opening up the 2m band and to get rx about 146 MHz required
a cpu change. If you like soldering 0.5mm pitch 80 pin QFP's
plus the cost of the CPU about $50.76 + shipping
and handling, from Icom America, fine go ahead.
Also some of the RF adjustments are different since
the band plans for Japan and the USA are different, thus
I beleive that your grey market import would not be legal
for use in the USA. I managed to replace the cpu,
I am very happy that it went ok.
I don't recommend it unless you are a real
masochist.

Peter

PS you can get even a better deal on 2nd hand stuff.
a 706 goes for about 50~60,000 yen 2nd hand.

For new equipment, a 20% discount is typically
available from any retail store in Tokyo so knock
20% off of the 138,000 yen, please note that
the sales tax anywhere in Japan is 5%. You have to
add it. (I am not aware of any duty free shops that
carry ham equipment, and even if they do those
stores don't discount.)

179. Yaesu provides FANTASTIC customer service..

From: Spamfighter@ziplink.net
Message-ID: <5pc767$4iu$1@kayrad.ziplink.net>
Source record: 171545

I'm posting this message to inform the ham community of my recent experience with Yaesu of America. This evening, UPS dropped off a new FT690 MKII. After opening the box, I uncovered a significant problem with the unit. I telephoned Yaesu America, and found myself speaking to a customer service representative named Ric.

I explained my problem (which seemed to be pretty serious), and suggested a solution that would provide a "win-win" resolution to the difficulty. Ric indicated that he needed to get authorization from the national sales manager, and would telephone me in five minutes with an answer.

I honestly didn't expect an easy resolution. Most companies boast about their customer service prowess, but rarely follow through when a customer brings a problem to their attention. I figured that I was going to end up paying for this unfortunate misunderstanding.

Within three minutes, Ric returned my call, apologized for the snafu, and indicated that the problem would be rectified within the week. He completely understood my complaint, and wanted to solve this issue in order to create a satisfied customer. Compare this attitude to the ones exhibited by the other ham radio manufacturers. Someone at Yaesu really understands customer service.

Based on my experience, I can attest that Yaesu makes FANTASTIC ham gear. Their units are well designed, rugged, and reliable. Even so, the best part is that Yaesu really knows how to treat their customers.

If you need a radio, I would suggest that you buy Yaesu. No other brand comes close.

Message-ID: <01bc8682$fd134420$0b09c8c0@ramlow.wi-net.com>
Source record: 171547

Greetings all,

In reading throught he manual on my 50r, I do not see anyway to erase a memory. I was able to find the information on "Hiding" a memory. The only problem I see with the hide option is that when you go to save a new frequency and you turn the knob through the memory channels, the hidden memory still shows up as a "Used" memory. Is there any way to make it a Chu instead of just a Ch?

The next question I have is: Is there a way to use the Morse Code ID'er for normal operations? It would be nice if there was a way it could ID every 10 minutes without having to deal with the ARTS between two units.

Any information would be appreciated. If you reply to the newsgroup, please send me a CC at the following address: ramlow@wi-net.com

Thanks
Jeff N9WBR

AES is a top notch quality outfit. I have dealt with them over 5 years or so and have ordered from them dozens of times, buying several thousand dollars of equipment. Every time I place an order it is at my place the NEXT day. I just bought a Yaesu FT1000MP station a few months back and I could have saved a hundred bucks or so somewhere else, but would not even consider it because of their high quality service advantage . They gave me a VERY FAIR trade in price on an old rig also. Don't know about your problem but I assure you it must be a very rare incident. ----

Source record: 171549

> The only hard part is finding a nine-pin plug to match the
> acc socket.

This is a normal tube-socket plug. Same as used on the
Kenwood TS-520S and TS-820S transceivers. I found some
at Mouser and Gateway Electronics before.

The problem with running the Atlas on battery power is
low voltage and thus instability -- they dont like 12VDC --much prefer
13.8VDC. In fact, the "station console" CS-220 is actually a poorly
regulated 16 volt power supply, as I recall.

The only way I've successfully run the Altas on battery power
is to use a 12VDC to 13.8VDC stepup regulator/power conditioner.
In the car, I guess the voltage is a bit higher (13.8V) so
there is no SSB "warble" problem. This was the case with both
an Atlas 210X and the 215X.

For reduced power operation, I think you can set up a simple
ALC voltage fed into the back accessory plug to allow the ALC
to reduce RF output (no spikes) while maintaining reasonable
microphone gain and average power out. This is the same
approach taken on the TS-440S, as the mic gain on that rig
is also very sensitive to adjust to QRPp levels.

I love Yaesu radios, but something that they lack to elaborate on in their manuals is charging batteries. I have a question:

Does the E-DC-5B cigarette lighter adapter charge the battery when the radio is on? And what about when it's off?

I used to have an FT-530, and I always slipped the battery off and put the little cover on when using the adapter, which was pretty much always... so I didn't have to worry about erratic charging cycles and messing up my battery. But with the 50, you pretty much have to keep the battery on at all times (as far as I know) but I am a little worried that I am also putting charge back in to my battery.

I like to leave my radio on at night and APO after 30 minutes... but don't want to fry the nicad.

Thanks in advance.

Well, I am on my third Yaesu, and have never had to call customer
service, so I can at least say they are reliable as hell. Went from a
470 to a 530 to now a 50RD, and they have gotten smaller and better. I
will never buy another brand.

189. Looking for Yaesu Owners

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-02 00:00:00 UTC
From: dthimm@newnorth.net
Message-ID: <33b9cc87.19275811@news.newnorth.net>
Source record: 171555

Greetings,

I have recently made available the N9IPV Spectrum Analyzer for the
Yaesu FT757 style rigs.
I would like to extend the same software for owners of the following
rigs...
Yaesu FT 747 style
Yaesu FT 767 style
Yaesu 980 style

Since I do not own any of the above rigs, I cannot do this unless an
owner of each of the following rigs will come forward and send me a
copy of the page(s) in your manual that describe the communication
protocol and a diagram of the front panel.

In return, I will give you a copy of the completed software.

E-Mail me for my address please. dthimm@newnorth.net

If you would like to see the features included in the FT757 version,
please visit my website and download a copy of the software at:

http://www.newnorth.net/~dthimm

Thank You and 73
Dan T.

Source record: 171563

I like the radio in size and frequency coverage but why in the heck did Yaesu create such a difficult memoryconfiguration. I did figure it all out and I don't like it. You can't view or scan VHF and UHF frequencies (except if you use the dual watch mode), it's either VHF or UHF and they use the same 52 channel memory pool. Or you can 142 memories but then you have to turn the radio off and power it back on using the M/V button, and then you can't store the tone for the frequency in memory! Anyone else care to comment on the Yeasu VX-R1? Looking for other input.

Charging the FT-50R or FT-50RD

You can plug in the supplied NC-60B AC wall charger or E-DC-5B car adapter and the FT-50R will automatically charge the battery when the unit is On or Off !! The FT-50R built-in smart charging circuit even selects the correct charging voltage for the FNB-40 (6V) and FNB-41 (9.6V) Batteries. So no need to have 2 separate wall chargers !!

I would suggest you leave the unit in the off mode when charging overnight !!

201. Standard C510A vs Yaesu VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-02 00:00:00 UTC
From: James Sakane <sakane@earthlink.net>
Message-ID: <01bc86ac$566b49e0$46c12299@sakane.earthlink.net>
Source record: 171567

After reading all the mail on the Yaesu VX-1 ... I'm glad I bought the Standard C510A. Full 1 watt with common batteries, touch tone with a real key pad, full 200 channels in 20 banks (mix VHF/UHF) + Call UHF and Call VHF.

The debate between which radio to purchase (C510a or VX1) could be made even more affirmative for Standard if they would release the receiver modification for the C510A.

Every radio I have I bought through AES via mail (so I don't have to pay sales tax) And the last Yaesu I bought came the NEXT day via UPS even though I didn't pay for next day service! I called every mail order company in the US, and they had the lowest price.

My last order was 1 or 2 years ago, so I hope they haven't gotten worse in the last few months as I hope to use them again.

The one thing I found was that 90% of them had a noise problem on high power UHF Transmit. Yaesu is fully aware of the problem and has no repair for the problem. They have a service bulletin that doesn't solve the problem that they would be happy to do for you, as long as you pay to send it back to them, wait your few weeks, get it back and find the same problem.

In talking with them at Dayton, the problem is not only in the FT50, but also the FT40 and the commercial VX units. They are, quite simply, selling a radio with a known problem. Most people I have talked to that own them have never noticed the problem as they use low power, or they use repeaters only and think the "cracklies" are on the repeater. But once they check it out on simplex, most have the problem. Maybe this is a reason??

Tom

I just did the mos and it works.
1) remove power to the unit (unplug it)
2) Using the Hex tool remove the front Hex screws on the front face plate.

3) Gently remove the front face plate...it plugs into the main unit
4) looking at the PCB you will see "W1" silkscreened on the PCB
5) near it is a surface mount diode.
6) gently desolder it or one leg of it ... I hace one leg raise so I can reverse the proceedure if I want to.
7) No You can receive aircraft 112 MHZ to 175 MHZ and TX from 135 MHZ to 175 MHZ.

213. FT-2500 extended RX mod?

From: martyt@geoaccess.com
Message-ID: <33ba51c8.143128838@news.alterdial.uu.net>
Source record: 171579

Is there a modification for the Yaesu FT-2500M that will allow extended receive (like from around 118 to 174 MHz)? I've searched the web and turned up nothing so far. I'm thinking of buying one of these radios and would like to be able to extend it's receive capabilites.

Any info would be appreciated. Please reply via e-mail as soon as possible!

73s,

I have the VX-1 and like it. It is really cute!

But it will never replace my FT-50 with 5 watts in a small package and two watts with alkalines. It is really small enuff to go anywhere.

My girl friend is also a ham and has a 508 (and an FT-51). The little radios are really good when we are reasonably close. Plus I work where there is a repeater about 1000 yards away, so ...

First of all, your chassis should *not be hot*. In a two wire distribution system, only hot and neutral are carried to the load. Assuming the equipment uses a transformer type power supply, *neither* lead should be connected to the chassis. Thus there should be negligible leakage to chassis. You need to investigate this because it could be a symptom of something which could become a real hazard. Possible sources of leakage are failing RF bypass capacitors on the AC line to chassis, or a transformer with the insulation between its core and its primary winding breaking down.

If neutral is connected to chassis, IE an AC/DC set or some forms of switching power supplies, the chassis should be in a double insulated enclosure. Otherwise it is a potential shock hazard if the plug should be inserted the wrong way in the receptacle.

Now the reason you can get a ground loop between two separate Earth connections is that neutral is elevated. Neutral is bonded to Earth at the service entrance panel, but if the loads in the panel aren't balanced, it will elevate above ground at a point away from the panel. Check the current in each phase at the panel and move loads on the panel to try to achieve a better balance. You can't get this perfect, so you should also bond station ground and power ground together with a nice heavy wire. The National Electrical Code requires all grounds to be bonded together anyway. The wire gauge should be at least as large as the distribution wiring.

I'd also double check continuity between panel neutral and the power company Earth connection. If this has become loose or corroded, neutral won't even be at Earth potential at the service panel.

What *I* would do would be to install a subpanel at the station and use a 3-wire distribution plan from it to the equipment. That way, chassis of the equipment will be bonded by the third wire safety ground any time power is connected. Neutral in the subpanel should be bonded to Earth at the

station ground (which should also bonded back to the service entrance ground as reqiured by the NEC). Note the NEC normally forbids tying neutral to Earth at any place except at the service entrance panel, but it makes some exceptions to this rule. This is one of them.

This buys you several benefits. If the subpanel is bonded directly to the station entrance bulkhead where all your antenna leads are suppressed, you'll now have a ground window for your station which will mitigate any damage from a lightning strike to either the power line or to your antennas. And the subpanel gives you a ready master disconnect for station power in the event of an emergency. This is something anyone who works on their equipment needs. This disconnect should be well labeled, and all family members should know where it is, and that they should use it in case of an accident *before* trying to pull your carcass out of the radio equipment.

It can be a good idea to permanently wire a red light to the station side of the subpanel so that it is instantly clear when the station is hot. Don't depend exclusively on this, however, because the bulb can fail. Always check the disconnect switch position too before poking around in the circuitry of your equipment.

The local phone co. here recently replaced their mobil communications system and I scored about twenty of their old radios. They have a seperate telephone style handset with 2 didget channel readout and are full duplex with 20 watts operating around 150-160 mhz running off 12v dc. They are manufactured by international systcoms limited,4900 fisher, montreal canada. I'll take $20 each, $25 with the handset and multipin connecting cable (I advise getting the handset too, its pretty cool) plus you pay shipping (around $20), which I will ship c.o.d. cash only. sold in as is condition with no guarentee, but they all came straight out of the trucks so I assume they all work.

You will need to readjust the two opamp inputs to the tuner. ther
service manual has this procedure.

Also it could be a bad antenna, does the tuner do this into a dummy
load ?

A similar thing happened to me a year ago. I ordered a Yaesu mic from the Main store. I gave the salesman my credit card # etc. I told him it was a dicontinued mic. He said he had two in stock so it was no problem and that I should have the mic within a week. Well 14 days pass by and I called to see what happened. There was NO RECORD of my order. The salesman who I spoke with said that I had to pay UPFRONT since there was no mic in stock. HEY....How about calling me to say that the inventory on their computer was in error and that is I still wanted the mic I have to prepay so they can get it from Alinco. I NEVER got any notice. The salesman who I originally spoke with said he couldn't recall who I was or find any trace of my order even though I gave them my credit card info etc. I got the mic from HRO in SALEM,NH.
I thought this was an isolated incident but by original posting I see it isn't.

245. Yaesu FT900AT Split xmit dit problem... Anyone else confirm?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-03 00:00:00 UTC
From: Vic <nospam.vgadzik@vivanet.com>
Message-ID: <33BC5DED.27FF@vivanet.com>
Source record: 171361

While using my FT900AT during field day, we wanted to work split and contact RS-12 on 29mhz RX and 21mhz TX.
Setup rig, with A VFO and B VFO to the correct bands, and with MOX tuned the external tuner just fine for transmit.

Here's the problem: When running split cross band, the "dits" will not transmit from radio. "Dahs" seem to go, but no "dits", no output at all, even when listening on another station 20 feet away.
The speed of sending does have an effect, but I must lower the keyer speed to absoute minimum to get any signal at all, and that signal is nothing like what a dit should sound like.
After scrambling for the pass, we gave up. I then brought rig home, and today setup on table in backyard and connected to vertical antenna, and tried to duplicate. Still no dits... on any frequency of cross band split.
If I split IN BAND, it works OK. I tried lowering power, and switching the internal "relay" switch on bottom of rig (it sounds like the internal relay goes anytime the SPLIT is activated, no matter where the switch is placed under rear cover). No luck whatsoever. Something is wrong here...
My ICOM 765 does not exhibit this problem.

Anybody else care to confirm this issue? Is it that the FT900AT will not do cross band splits???

Well I would say that two incidents in a year is quite isolated,
considering that they process thousands of orders in a year. Everyone
makes a few mistakes, but obviously you havent or you wouldnt be flaming
AES. Give them a brake and have a great 4th!

Well .... they sold one to me. I bought one with all the accessories factory installed about two weeks after they announced it on the website. I didn't think the price was excessive. I remember when Drake was in the Ham market before and my recollection is that Drake's were premium radios, priced accordingly. Why would new Drake's be any different?

> What do I have to do with the software to make the ft50 transmit
> out of band?

1. Using the ADMS 1C Software make a .RDF file and name it FREE.RDF
2. Change with a Hex editor the byte on Adress 0CE7 to be 06 (in the file FREE.RDF)
3. Upload the FREE.RDF to the FT50, you FREEBAND now.

Simple, isn't it ?

PS. Take a look at http://members.aol.com/aeimn/ft50/index.htm

255. Yaesu 101 info, please

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-03 00:00:00 UTC
From: Tom@saddlecrk.COM
Message-ID: <s3bbc020.036@dsm-usa.com>
Source record: 171371

Hi. I'm a new tech-plus with an itch to start using CW on HF. Just bought a Yaesu FR and FL 101 from an ad here on ham-equip, along with various other gear (tuner, swr meter, antenna, etc). The gear is in absolutely pristine condition....looks as though it has never been used.

I am VERY interested in any information I can get on these rigs. I understand there was a "FoxTango" newsletter published at one time...is there a source for back issues? Is there a usenet newsgroup or other sig that deals with this equipment?

I understand that Yaesu made many, many different flavors of the 101 rig. How do I tell which mine is? There are no apparent marks showing anything other than 101, and the serial number on the transmitter is 7K 100249.

What accessories might be available for this equipment? How about a transverter for 6m and 2m? How about 6m and 2m on the receiver?

I have searched for web pages relating to the 101 and have come up empty. DejaNews returns several references to news articles about the gear, but they are almost all random FS or WTB ads.

Help out a new ham, please, and steer me toward some sources of info. Thanks!

This will be the last announcement before the final call for bids.

This HP 1631D Logic Analyzer/DSS is being sold at absolute
auction to the highest bidder. It is in excellent condition and
complete. It will carry a 30 day warranty. Dealer prices for this
instrument run from $1800 up. The present high bid is $700.

A companion HP 1630D is also being auctioned with the present high bid
of $250.

265. Warning! Terry Keith Hammond: Scam Artist

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-03 00:00:00 UTC
From: hswear@swbell.net
Message-ID: <5pffc1$8n9@miso.wwa.com>
Source record: 171389
Cross-posted to: alt.radio.broadcasting,alt.radio.pirate,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

Back in the middle of May I responded to a posting by (Terry) Keith Hammond (khammond@mindspring.com) of 162 Maple Street, Auburn, AL 36830, 334-821-3329. Keith was offering some used equipment for sale.

I got ripped off! Here's the story.

I emailed Keith and talked to him. Seemed like a nice person. I'd seen his posts on this and other newsgroups. We agreed that I'd send him a check for $370 for the equipment. ($20 was for shipping via UPS Blue).

After a week or so, I had not yet received any merchandise, so I called Keith. He gave me some UPS Ground tracking numbers that turned out to be for a modem he was shipping to Boston. Other phone calls and emails ensued. Other excuses were given. One day I got his wife on the phone. She said that she thought the equipment had been sent. Not so.

This went on and on. I exercise undue patience. It is now the beginning of July....

For a while, Keith's phone was temporarily disconnected. It works now. But he doesn't return phone calls. He doesn't answer email.

I know that Keith has been active in the used equipment area. He also does contract work as a broadcast engineer. If I were you, I'd avoid this guy like the plague.

From: Peter Shintani <shintani@tv.sony.co.jp>
Message-ID: <5pfja5$dki@oskgw.osk.sony.co.jp>
Source record: 171393

Please disregard the subject of my previous posting.
I forgot to change the wording of the subject of my reply posting.
Sorry for adding confusion to the usenet.

It's definitely not worth the hassle to get a radio from
Japan in order to save a hundred dollars or so.
In addition to possible TA problems, the instruction
manuals are in Japanese, often accessories that are standard
on the US model are optional in the Japanese models, and
there is no warrantee outside of Japan! Similarly, I doubt
if the respectice service department in the US would
honor the warrantee more likely it won't touch a non
US model !

Play it safe, buy locally from your neighbourhood store.
Peter

270. OOPS: C508A power out not so bad after all.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-03 00:00:00 UTC

Source record: 171395
Cross-posted to: rec.radio.amateur.equipment,sci.electronics.repair

I have an old PRD model 680 Calorimetric wattmeter.
Need Schematic/cal procedure.

It has two sets of scales 1 and 3 units full scale.
the 1-scales seem to track. That is when inserting a 20dB attenuator,
I get the same reading at 100x less power. Same for the 3-scales.
But putting in 3 units of power on a 3 scale does not read 3 on
the next up 1-scale. I assume there's a tweek in there somewhere
to set this ratio.

It's an old mechanical chopper amp on a thermocouple.

Frequency response goes down to DC. Am I correct to assume that I
can use a DVM to measure the resistor, set the input voltage
and cal it based
on this DC power. Anything wrong with this assumption?
tnx miker

Stan King W4KR ex-W8POZ SCAM ARTIST

I need any information on the present whereabouts of Stan King, callsign W4KR (ex-W8POZ). He left many hams in southeastern Michigan holding the bag for many thousands of dollars in an elaborate scam.

In spite of a court order (relating to these frauds) to keep his current address on file with the court in Ann Arbor, Michigan, he skipped the state in late 1996. His current W4KR license address shows a "dead-end" mail drop in Florida, and his driver's license was changed to Texas with a false address.

If you know where this crook is, please email me with the information. Any tip, no matter how small, is helpful.

73, and thank you very much.

279. Help with Alinco DJ-S41T VCO...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-03 00:00:00 UTC
From: simplexsys@aol.com
Message-ID: <19970703124101.IAA15412@ladder02.news.aol.com>
Source record: 171403

Hello all,

Looking for some help in adjusting the VCO lock on the DJ-S41T. Bought the radio for hamfest communications and thought that I would like to MONITOR ONLY local govt. agancies (dare I say "scanner"?)

The problem is that it appears that there is NO sensitivity above 459 MHz (VCO unlocks on tx there.) Can get our local (1 mile away) 100w govt. repeater, but can't get the next govt. repeater that is 6 miles away (again, 100w @90' AGL) In the VCO lock range, the unit looks to be "hot as a pistol"!

Using the schematic and adjusting what looks to be the VCO adjustment pot gets no change in the VCO range. (BTW... VCO locks in from 410-459 MHz)

Thanks for any help you may be.

Jim

If you do the out of band tx mod for 200 HZ to 200 MHZ continuous you
could destroy the final section if you tx from 200HZ to 1.6 MHZ and
from 60 MHZ to 93 MHZ.
There is a another mod that allows you to tx from 1.6 to 60 MHZ and
136 to 175 MHZ. This is the reccomended mod. Basically, the UK Hams
wanted to use 4 1/2 meters but they could damage the IC-706 MK II.

Source record: 171411

Hi Folks,

I have available for sale an extremely well built high power AM transmitter that covers 160 thru 10 meters. Final is a 4CX1500A modulated by a pair of 3CX1200A7's using 5KW broadcast iron. Fully metered, vacuum variables with turns counters, extra final tube, all machining professionally done. Plate power supply not included, needs 3500VDC at up to 1.5 amps, depending on the desired output power. All other supplies built in. Requires about a total of 26" of 19" rack space, plus room for the modulation transformer, reactor and plate supply. It can run very conservativly at 375 watts out...up to....2500 watts! $2295 OBO. Due to weight, it is pick up only in Bolton, MA. 30 miles west of Boston. Email me for details. This is a one of a kind that exceeds broadcast quality in operation and appearance.

Chuck..

288. Re: "HOT" Chassis to Grou

From: don.phelps@infoway.com
Message-ID: <867938183@infoway.com>
Source record: 171412

My suggestion is to just forget about it, and keep operating as usual.
Here is probably what is going on.
You have bypass capacitors from each power lead to chassis ground.
For better or worse, all line filters seem to want to do this.
You measured the ac voltage difference with a very high impedance
voltmeter...maybe 11 megohms, from which you could calculate a
leakage currant for 18 volts. Just ground the chassis, but
that ground should eventually be tied back to service entrance
ground. If you live where they have lightening, then you worry
about that separate from your bypass capacitors.

Frankly, I don't know why they don't just put the bypass
capacitors accross the power leads, and don't connect to chassis.
But everyone connects bypasses to ground for some reason.
Don't understand why one wants powerline noise pulses running
on chassis ground, but everyone seems to.

Have fun on the air.

Yes, Drake has returned to the Ham Radio Market with a 2 MTR FM
transceiver. The radio looks just like the R8 SW receiver and has a
separate 440 MHZ receiver. The only bad thing is the price $1300 !!!!!
I saw the picture and ad in the AES Catalogue. I want to buy American
but the radio will NEVER sell at that price.

Source record: 171417

Hello de KA2YPT

I wish to sell a mint 75A-4 that I inherited a few years ago. It is in perfect working order and never ceases to amaze me how well calibrated it had remained. It has the 4 to 1 spinner dial and contains 3 mechanical filters, the stock 3.1 khz, the somewhat rare rtty 1.5 khz and the very rare 2.1 "narrow ssb". Cosmetics are beautiful and the radio is a very large delight to behold..HI. Serial number of this unit is 4181. I have the original manual and calibration/test data sheet of the unit. Prefer pickup as I am a little hesitant to ship this beauty, but will consider meeting buyer 1/2 way within reason. Of course would love to demo for prospective new owner. This radio would be a showpiece in any ham shack.

I hope a collector might want it. Price is negotiable, best offer but please be realistic.

Please feel free to e-mail me at ka2ypt@li.net or phone (516) 277-2198 till 10PM please east coast time. I am located in Islip, Long Island, New York

Thanks for reading and 73 to all de Tony KA2YPT.

Would you believe....a CB shop?

I'm pretty sure this used to be something that Firestik sold.

You could also have a machine shop make one, but it would be
expensive. If you have a drill press, a vise, and a
3/8-24 tap you could make your own from a piece of brass or
mild steel rod or bar stock.

>WB9IQI

Is the radio on frequency and the display is incorrect, or is the
display correct and the radio is off frequency?

On radios like this (out of production), Icom will service it OR sell
you a Service Manual but they are not likely to give you a treatise on
what is going on or what you can do about it.

Icom has a FAQ on their website for the 735 and numerous other older
models in regards to many common service problems their techs have
dealt with...have you looked there to see if your problem is on their
list?

From: fatkinson@mishmash.com
Message-ID: <33bbd4c1.95911081@news.mindspring.com>
Source record: 171422

Hello,

Due to my extensive academics, I have been very isolated from amateur radio for a number of years. I have now finished my master's studies and wish to get a two meter rig so I can meet some other hams in the area in which I now live (now that I have time to 'get a life').

I am a techie. Just having a radio is not enough. I need to be sure I am buying one with all the features that I may ultimately wish to use.

When I got started in two meters, I read the ARRL publication entitled 'FM and Repeaters'. In its day, it was a very thorough and complete way of gaining a basic to intermediate understanding of two meter operation and related technologies.

I discovered that this book was no longer published by ARRL and I got the VHF Companion book (as a number of people said it was the alternative to the old book). It was nothing of the sort. It barely mentioned anything about private line, only brief references to what was being done with touch tone, as well as other writing that only served to whet my appetite for *more* information, rather than give me the basic knowledge needed to make a good choice for my next two meter purchase.

Does anyone know of any Internet resources or books that give this sort of overview? I want to know more theory about PL, TT, and other technologies that are now being used in two meter operation.

Any suggestions would be appreciated.

> new for $219 from AES?
>

I purchased one about 6 months ago- should have gotten it earlier than that. It's come in quite handy, especially in working on mobile hf antennas. I've also used it to tune up antennas for 2m and WX sat work.

It's built fairly well, but I wasn't impressed with the MFJ optional case- it doesn't provide protection for the tuning knob that sticks out from the unit. When I carry mine around (like for field day) I put it in a hard shell case with accessories like the AC adapter and my home made set of dipping coils.

Using it for a dipper is useful as well- although I wish I had never parted with the old Heathkit dipper I had many moons ago.

Mr. Swearengen has been informed on several occasions as to exactly what has been going on with his order. Mr. Swearengen has also been fully knowledgeable of the fact that he was NOT dealing with the actual equipment supplier as well, but a representative thereof. Mr. Swearengen was advised that sending a check IN ADVANCE would not be required and COD shipment was my preffered method of shipment. I refuse to take credit for the stupidity of others (supplying, shipping and receiving).
I have other orders pending for these amplifiers and, upon being informed of subsequent delays in delivery, people usually respond with, "Well, you told me that you are only a third party. OK, I ordered it COD anyway... So I know I haven't been ripped off."
Mr. Swearengen also has been advised that, approximately two weeks after shippment, his amplifier had been returned to me as "undeliverable". It is being shipped yet again. Questions? Feel free to contact me.
What would you want to bet that the amplifier either comes back "undeliverabl again, or (even more within the thought patterns of Mr. Swearengen) he claims that it doesn't work? ((Of course, AFTER connecting it to an improper load, overvoltage, overdrive, etc.)
Either that, or soon you'll all hear a new unlicensed FM station located at 116651 Addison Rd. Apt. 2602, Dallas Texas announcing to the world that they've been ripped off on the very amplifier that they claim to have been ripped off over.
It all fits into the equation and Mr. Swearengen's general outlook.

I talked to the Standard rep at length about the 510. He said they
were coming out with a mobile adapter. Connects your 510 like a
microphone to a unit mounted under the dash/seat/etc. Converts it to
a mobile. He talked like it had a power amplifier in it.
Claimed people in high crime areas really like not leaving a rig in the
car. Just unplug the 510 and you're off.
I'm really surprised it only costs $100. Looks like one can now
afford to have a nice dualbander in every vehicle.

i also have an early 706. i have it mounted on a "cb hump mount"
the angle of the mount is perfect for viewing the display and the
wires and coax fold nicely underneath. plus i get a built in
3 x 4 inch speaker and two cupholders. spiffy yet attractive. =]

The flashing indicator means that the VCO is unlocked. There can be
a number of causes for this, basically anything in the PLL loop could
cause it. Most commonly it is an indication that the VCO is trying to operate
outside the frequency range for which it is aligned. So a simple alignment
may solve the problem. But it sounds more like you have some other
component in the circuit that has gone intermittant on you. I'd check
for cold solder joints or a cracked trace first.

I found that you can not write to a memory if it has the priority set
on it, move the priority to another memory and all is OK, I've done it
with out proble, in fact I sent my home channel to 146.52.

Hope this helps

I have a 95 Winstar, and I found a square rubber plug up on the drivers
side between the engine and passenger compartment.

You can see it from under the hood up over and in behind the drivers
side shock absorber mounting.

If I recall correctly, I had to remove a square punch-out piece of
insulation up under the dash to access the side of the plug in the
passenger compartment. It is up quite high, above and to the left
(looking from the drivers sear) of the steering wheel column.

I punched a hole in the plug, ran my wires through it, and replaced
it for use as a grommet. Works fine for me...

>kc5yqs@qsl.net

I feel that this is one of the best investments I have ever made in a piece of test gear for radio use! It works as advertised, plain and simple. Make sure to get the windowed & padded carrying case...it really helps keep the unit looking good and unabused.

I haven't used it with the grid-dip meter option.

The drawbacks? It doesn't cover UHF....BIG bummer. The resistance meter is a GREAT addition.... you can see it all in real time!

Batteries seem to last forever! (mine are over a year old and still going strong....and I DO use this thing).

Good stuff, construction is better quality than the average MFJ "lightweight" stuff. I can recommend it!

May not have been the best way to do it, but there's a grommet in the
firewall where the speedometer or brake cable (or something like that)
goes through - it's a big, rippled affair with plenty of clearance on
either side. I simply poked a hole through that grommet and fished
the wires on through.

The harder part for me was figuring out where to install the rig - I
spent probably 3 hours trying different things and wound up attaching
it to the plastic sides on the right side of the drivers seat right
behind the emergency brake. I wanted to install it inside the center
console but the radio was too long and I couldn't find a way to get
the lid off of the console...

I've worked with them both walk-in (grew up in Milwaukee & lived in Madison for 13 years) and mail (now in Nashville). Never had a problem. Indeed, last fall I took a dead TS-940 (purchased used in a private deal) up there for repair. They warned me non-warranty repairs on gear bought elsewhere might take awhile -- but some 3 weeks before they said they'd probably have a chance to get to it, a tech called -- said it was ready -- and fully explained what he found wrong & what he did to fix it.

And when I lived in Madison, if I ordered something before 1pm it was usually on my doorstep the next day -- even though I never requested, or paid for, next-day delivery.

Indeed, in some 20 years of ham radio in Wisconsin, the only serious complaint I heard about AES was about selling too many FT-101E's to CBers..

>>sixty).

This is not an answer to your quesiotn, but a comment on the battery thread. I used the lithium AA's in my C508A and now on my C510A. It is NOT a great deal money-wise, since I pay $4.50 for a pack of two cells and they last two or three times as long as alkalines. However, my limited testing indicates they have a flatter discharge curve, maintaining full 1.5 volts under load right up to their end of life. That means full power out all the time. Also, they are noticeably lighter than the AA alkalines.

regards, Don (KE4KYO)

Mates,
A buddy of mine had the same problem. Primary clock in unit was off.
He ended up buying their High Stability clock to keep in on frequency.
He also shamed the ICOM service folks into sending him a service manual
since the unit new out of the box was poorly aligned from the get go.
Took quite a bit of saber rattling to get the support from the ICOM
folks though. Nice radio other wise, but a radio with an error
in the error of 100 hz at ambient temps in this day and age is kind of a
joke given the state of cheap TCXOs

I have had contact with Yaesu Customer Service and they have been fantastic. The backup battery in my Yaesu 757GXII went out and I called to order a new one and they said no problem and sent me one for free. They I went to work on my Yaesu 757GXII and accidently shorted out something. Clearly my fault. I troubleshooted and found that I had opened a coil. I called again to order a new coil and they sent me this for free as well. I then sent them a check for $5 and thanked them for the great service and them sent the check back with a note thanking me for the kind words and telling me the check was not necessary. Long live Yaesu.

Hi, I have a like new condition, used by non-smoker, Kenwood TS850s radio for sale. Comes with the matching Kenwood SP-31 speaker, mic, manual, service manual orginal box. Unit has factory installed YK-88SN-1 SSB filter and YK-88CN-1 CW filter plus voice freq. read out chip. Used very little, moving regret having to sell this unit. Will pay all shipping and insurance fees anywhere in the USA, $1500.00, Jim

PLEASE NOTE:!
============
============
Most of the Modifications below work only with the old one:
Kenwood changes the processors at ser-number 609001.
From this time, the memory skip-function can be selected: during scanning
the memories, some channels could be skipt.
But: So far, the crossband-repeater could not be activated, yet.
The old one don't! have this faeture, but the diode-matrix, as shown below,
works correctly.

*:Modification needed!

CHANGING THE BANDS:*
===================
Press the F-key and then press the LOW-button to toggle between Air-Band
(340Mhz on the VHF Band) or the Phone-Band (850Mhz on the UHF band) and
```

the amateur radio band.

CROSBAND-REPEATER:*
==========
The TH-79 does go into X-Band repeat. Press the "F" key then the "MONI"
key to enter repeat mode. Use the same to return to normal. There is a
10 min transmit limit so it's not useable for long duration monitoring of
a continuous transmission. That's understandable in light of the number
of horror stories I've heard of people frying their HT's in repeat mode.

CLONING THE TH79E*
==========
To clone the memory contense of two radios on the air. The clone procedure
is same with all others. (use of DTMF tones, do not disturb transmission
etc.) You must take care that both radios are really same: both have
extended range or not, both are E-version or not etc.
It will cause some problems if you try to clone i.e. an E version
without expansion into a A- or J version.
If you have both radios please hold down the -0- key / PAG L Key when
you switch on the radio. So you see the letters CLONE on the display.
Please push the ptt on the radio which has to be the master.
It takes a time to transmit all memory with maybe names, call sign etc.
After Clone is finished you see END written in Display. Best is to switch
of both radios. After switching on again you will have two same radios !

EXTENDED RX/TX
==========
Thats all...Don't cut the green wire, or install any jumpers as before.
This mod is the official one from Kenwood, taken from a data sheet put out by
them.
1. Open the unit by removing three screws from the back and one under the
DC power input cover. Carefully separate the front and back pieces.
The two case halves may be disconnected by pulling the wired plug and by
prying the brown latch on the ribbon cable connector up enough to
release it.
2. On the front PC board in the lower right corner as viewed from the rear
with the knobs pointing up there are seven spots for diodes in a row,
with one diode missing.
| o o o o x o o |
_____|
2 3 4 5 6 7 8
The numbers are D302-D308, left to right, with D306 missing.
3. Remove diodes D304 and D307.
Now you must have this:
| o o x o x x o |
_____|
2 3 4 5 6 7 8
5. Reassemble and apply power. Mod complete.
Now the ranges:
67-174.995 and 400-511.995 RX
136-174.995 and 400-511.995 TX.

PS: Just cutting the green wire by the recharging jack is the
MARS mod.. Don't cut if you intend to do the above mod..

Discription of the diodes:
==========
In my HT diode D303 are not installed, green wire cut. RX as wide as
possible (69-179Mhz) and TX from about 130 to 179 MHZ. No crossband repeater.
Now I tried to modify the handy, but i was not carefuly.
I removed D305 and the Bander goes in the Lock-key modus:
All keys are locked in cases of the Lock-switch.
QRG disapeared and the channel nummbers shine on the display.
Then I put D307 to the place I removed D305:
Now I had the TH79A version with no light, but a call channel installed.
All functions are the same as before, but TX was only possible on the
amateur radio bands. Automatic shift keying as discriped in the manual
for the american version. (Not to usefull in Europe :-), but you can
change the QRG's now....)
Not the situation on the TH79A I wand, I remount diode D306 to the location
of diode D307 to change to TH79E back. And now the work was finished:
Transmitting as descriped above, no lock function activ, crossband repeater
enabled. THE MENU-SETTING 18 are activ: "Answer back function" for the
paging mode: transmitts an code back to show that the call received.
But the continues TRX showing up later in this doc has not been verifyed.
The purpose of diode D302 was not to be able to find out because the first
diode I wand to unmount had been damaged ;-(
| o o x o o x o |
----
2 3 4 5 6 7 8

Here is the MARS/CAP modification
==========
1. Remove battery.
2. Open case by first removing 3 screws (#00 Phillips) on back and 1 screw
on side hidden underneath the rubber flap covering the DC power jack.
Gently pry apart starting at top; BNC connector will move with back,
knobs with front.
3. Spread unit out. Wires will "hinge" on the side with the PTT button.
4. Looking on the back of the keypad (front) half, locate green wire on
upper left, just below the CTCSS decoder module.
5. Neatly cut this green wire, and tuck back in so ends won't touch each
other or other components.
6. Reassemble.
Programmed memory will be lost since the CPU will notice the strap change
and reset itself.

Before: VHF RX - 118.000-173.995 TX - 144.000-147.995
UHF RX - 438.000-449.995 TX - 438.000-449.995
After: VHF RX - 118.000-173.995 TX - 142.000-151.995
UHF RX - 420.000-449.995 TX - 420.000-449.995

If I read the schematic right, the green wire corresponds to "W301", which
also serves the same purpose as removing "D308". More research needs to be

done on other mods; I'm especially interested in extending UHF receive beyond 450. There is a row of diodes right below the uC which appear to be D302

Remote Base Operation with Kenwood 732/733
==========
Kenwood has now simplified remote base operation of their mobile rigs with the TH79.

This only works with the TH79A version. The Kenwood-Cooperation don't know this mod.

I will not give a step by step on how to control the mobile rigs, since they are different. Hoewever, to really understand this feature, I would first get to know the remote control feature on the mobile very well. This makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the dual bander's keypad now becomes a function pad. Pressing certain keys enables or disables functions on the mobile rig by sending the DTMF sequences for you.

Please note that all this fuction does is send the DTMF tones over the air to control your mobile rig. I have not made a list of what each key does, but as the 79 sends the DTMF tones, the display will indicate the function. (i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

"The "RC" function is configured to directly control radios such as the TM-732. In fact, if you look at the layout of the microphone remote commands for the 732 it very closely matches the key assignments for of the "RC" mode. Since I have a TM-732 installed in my car, I had a chance to try this out and it's VERY convenient. Everything from direct frequency entry with the "F" key to enabling X-Band repeat. I'm really surprised they aren't marketing this feature of the radio."

Measured specifictions of TH79
==========

Band - VHF ----------
Frequency Sens (uV) Power Mode
--------- --------- ----- ----
108 4 - A3
110 2 - "
115 .75 - "
120 .40 - "
125 .30 - "
130 .30 - "
135 .30 - "
140 .12 2.9 F3
145 .12 2.9 "

150 .13 2.8 "
155 .15 2.4 "
160 .18 1.9 "
165 .20 1.45 "
170 .21 1.10 "
175 .30 0.85 "
179.995 .35 0.70 "

Band - VHF (2) (set to 300Mhz) -------------------------------
Frequency Sens (uV) Power Mode
--------- --------- ----- ----
300 50/75 - A3/F3
320 4/20 - "
340 .3/.6 - "
360 .2/.5 - "
380 .2/.6 - "
400 .2/.75 - "

Band - UHF --
Frequency Sens (uV) Power Mode
--------- --------- ----- ----
400 11 1.0 F3
410 4 1.5 "
420 1 1.85 "
430 .2 2.2 "
435 .12 2.3 "
440 .10 2.5 "
445 .10 2.5 "
450 .10 2.5 "
455 .15 2.3 "
460 .16 2.3 "
465 .20 2.0 "
470 .45 1.8 "
480 1 1.6 "
490 2 1.3 "
500 6 1.1 "
510 no RX over 509 0.8 "

BTW, close inspection of the RF deck in my radio shows no obvious
missing parts. I didn't remove the board to check the other side, but
my suspicion is that the 800 MHz parts are installed. I'd be interested
in input from others on that. So far I've not discovered how to make it
display any 800 MHz frequencies though."

CONTINOUS TRX
=============
Pressing the VFO-key and the PTT key after a short beep and waiting a few
seconds with these two keys pressed will bring the th-79e into continous
transmit mode for about 10 minutes until TOT ends.
This will also work with the MR key.

Near the allodgment of TSU8 there is a green wire: cut it.
1 centimeter up there is a resistance of 0 ohm!!:remove it.
So you can receive the 300 mhz band and the 900 mhz band
(you can find now this function in the menu 20 and 21).
To receive these frequences go in vfo mode and press F and
then key "low/hi/lo/el";if you are in vhf vfo you receive
from 300 to 399;if you are in uhf mode you receive from 800 to 999
You have the function of transponder too.
To active this function go in dual mode(uhf-vhf)and press F
and then the "moni" key.
That's all for the moment,i hope you enjoy it.
I'll send you other modifies if i'll receive something.
From DG7RO: On my TH79 the continous trx doesn't work. I tried serveral ways
but the hany goes not in the cont. trx mode at the end!

Die maximale Anzahl von Funktionen bekommt man mit folgender
Diodenkombination:

302 303 304 305 306 307 308
O=USED
O X O O X O X X=NOT USED

Diode 308 entspricht der gruenen Drahtbruecke:
Diode 306 ist fuer den CLONE Modus und die PAGING AnswerBack (Menu 18)
Weiterhin oeffnet sich Menupunkt 19 - 21.
Menupunkt 19 bezeichnet die Modulationsart im Bereich 300-400MHz. AM / FM.
CLONE erreicht man mit [0] + PWR ON.
CROSSBAND mit [F] + MONI. --- Ausschalten: Das selbe noch mal.
Es gibt noch eine Erweiterung die einen groesseren Frequenzbereich eroeffnet,
welche dann aber die Tastatur in den America - Modus schaltet.
Fuer Europa also nicht sinnvoll. (Entfernung der Dioden 304 / 307.)

Thanks for the response. It uses 452.100 MHz.
I don't know about the legality of things though.
Do you know any place that sells these RF Amplifiers?

Rizwan

No shortage of braying jackasses, are there. If you think it's too high, don't buy it. Them grapes are only sour if you can't reach them. Want to know what I paid for my 25 year old Collins hf station? 'Bout twice what the Drake 2m rig under "discussion" costs new. And I was glad to get it. Wanna tell me I'M a dummass? Sure, pencilnecks, stick to cheap imported cb's that aren't worth $10 after a year and tell each other how astute you are and what dummasses we are.

350. ** I don't understand ???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-04 00:00:00 UTC
From: djeo1@MAIL.TELIS.ORG
Message-ID: <5pkak1$k9j$1@mentor.telis.org>
Source record: 171252

I thought this newsgroup was dedicated to ham radio. I posted a problem I was having with some ham radio equipment I own. I posted it less than a week ago and it has already been dropped from this newsgroup. However, I am still seeing postings from further back regarding "Psychic advice" which obviously has no relavence to ham radio. Someone is in control of this newsgroup. Please explain.

351. WTB kenwood amp

i would like to find a amo that goes with the kenwood ts-858s line..
let me know what you have and how much you want for it..but please be
realistic with the price!! dont try to get what you paid for it..

352. FS Yaesu FT-727 dual bander + accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-04 00:00:00 UTC
From: RonL <nospam>
Message-ID: <5pk7jq$n8l@drn.zippo.com>
Source record: 171254

For Sale:
Yaesu FT-727 dual bander w/opt CTCSS installed
FNB-3 10.8v 425 mAh (4.5w xmit)
FNB-4A 12v 500 mAh (5w xmit)
NC-15 rapid charger (Required to power the rig and charge different voltage batts)
MH-12 speaker microphone
Operator manual
Tech manual
Does $249 seem out of line? If it is, I may consider your offer. I prefer local so you can see the rig before you buy.

354. Periphex, Maha or W&W batts + chargers?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-04 00:00:00 UTC
From: RonL <nospam>
Message-ID: <5pk7s5$o0r@drn.zippo.com>
Source record: 171256

I am thinking of purchasing a Yaesu FT-50RD. Requirements are 430-450 xmit and 1750 Hz toneburst. If you have comments here, I'll take them.

My real question however, it whose aftermarket batts and charger to buy? Quality, customer service and warranty come to mind as criteria. If I get an aftermarket quickcharger with drop in adaptors, I can charge my other 'toys' as well.

Please remove the <nospam> to reply to me.

Thanks and 73s

I have had a couple of minor problems with AES. Both were solved by
using some good buying practice. Suggest next time you buy from
AES, or any other ham dealer you follow these practices:
1. Always purchase using a major credit card. It leaves you at an
advantage if there's a problem.
2. Have the sales agent write on you order: CANCEL THIS ORDER IF

NOT COMPLETED WITHIN TEN WORKING DAYS. Do not let him talk
you out of it. Assume any order older than ten days is gone.
3. Any equipment that is to returned for warranty repairs should
also include a letter to the dealer and the credit card company
requesting that payment be held until repairs are completed
and equipment is working properly. This may get you some
cuss words from the service manager. Good luck with
shopping. Dave

The following Amateur Radio equipment is for sale and belonged to W4SPH, silent key. I am listing this equipment for his widow.

1ea Heathkit Apache TX-1 transmitter,
good appearance, operational
condition unknown,
with "old" style microphone.

1ea Hammarlund HQ-150 receiver,
good appearance, appears operational,
with matching speaker.

1ea RME receiver pre-amplifier,
80-10 meters, good appearance,
operational condition unknown.

1ea Type CND-46155, sn1068 receiver,
Navy Dept., RCA, good appearance,
operational condition unknown.

1ea Type CND-20131, sn4978 rectifier
power unit for CND-46155 receiver,
good appearance, operational
condition unknown.

1ea Heathkit GR-88 VHF FM tunable receiver,
good appearance, operational condition unknown.

1ea Model 5-300f regulated power supply,
500 volt, 300 ma, Dressen-Barnes Corp.,
good appearance, operational condition unknown.

Set QST yearly books (bound) 1936 through 1940.

1ea 1959 Callbook

1ea ARRL Radio Amateur Handbooks, 1962, 1964, 1978

All offers will be given serious consideration.

From: dddavis@atl.mindspring.com
Message-ID: <5phr25$l28@camel3.mindspring.com>
Source record: 171285

The mobile adaptor gives 2.5W output. The power booster that turns the C510 into a 50W mobile is about $400. I do like the idea. It would be great for installations where it is difficult to find a place to mount a regular mobile (like in all new cars).

Well personnally I think M@S@ is a trolling jerk but here's my one and only AES story,Milwaukee headquarters. In 1992 I moved into a townhouse sitiuation. I had rfi,so I grounded my 140S. That helped but no final solution. Since I was working alot of hours,16+ a day I decided to order The Bencher low pass filter and several snap on torroids for my neighbors. the filter was about a 100$ and the torroids were'nt bad.about 10$ for 4. This was the big Bencher,rated at 1500w PEP. Naturally,I ran a 100 watts through it! In 94 I hit it with 600 watts pep and it dead shorted to ground. Luckily I was watching the meters so my rig and amp were ok. It had a 5 year warranty so I called Bencher in Illinois. They told me too much power. I said 600 watts,it's covered for 1500. They told me quote "Too Bad,talk to AES". I called AES and refrenced my receipt # and recounted my spiel. They told me to contact Bencher,it's their warranty. I repeated my spiel. They then said there was nothing I could do nor that they could do. I said that I could take my business elsewhere,they said "Go for it". And I did,I've been dealing with Ham Radio Outlet in Atlanta for 5 years now and they have put their service and warranty commitment up front. They will beat most other prices and I am confident I will stay with them for the long haul. I will never deal with AES at all. For what it's worth. Jim KD4CDB

I have had good luck with AES until yesterday when I found out they closed there Clearwater, FL store with no warning. They had just moved into a larger building and had begun to add to their local stock. It was really nice to see and feel radios before buying and becuase of that I was willing to pay their higher prices. Just last week I had noticed that the radio I had gotten for Fathers Day had a special offer of a second battery for half price if purchased with the radio. Last week I went in the store and asked the manager if I could still get the special even thou I didn't notice it at the time of purchase. With no hesitation he said sure. Boy, that must have been the last day they were open. I got lucky, I guess. Anyway the store is no more and I guess they are going to ship there stock to the Olrando store. Sure am glad I didn't have anything pending (repairs or replacements)

Put me down for excellent for up to last week and poor starting this week. Maybe change my mind when I find out why they closed the store so sudden. Anyone have a clue? Watch for closing near you!??

Stan King W4KR ex-W8POZ IS A CROOK ! WARNING !

This guy defrauded many hams in southeastern Michigan for a great deal of money. He is under court order to keep a current address on file at the circuit court in Ann Arbor, Michigan but skipped the state in December 1996. His callsign address is a mail drop in Florida and his drivers license is a fake address in Texas.

PLEASE HELP US FIND HIM. Please email me with any tip on his whereabouts. It's guys like this we don't need in ham radio.

I have two Telrex five element yagis, one for 10 meters and one for 15
meters for sale. Both have been in storage since 1990.

#1 Telrex 10M523- Five element 10 meter yagi on a 23 foot boom
Price is $300

#2 Telrex 15M532- Five element 15 meter yagi on a 32 foot boom
Price is $375

Both of these antennas are the heavy duty commercial style TELREX
antennas made in Ausbury Park, New Jersey. Will box and ship by
motor freight collect.

Mr. Swearengen has been informed on several occasions as to exactly what has been going on with his order. Mr. Swearengen has also been fully knowledgeable of the fact that he was NOT dealing with the actual equipment supplier as well, but a representative thereof. Mr. Swearengen was advised that sending a check IN ADVANCE would not be required and COD shipment was my preffered method of shipment. I refuse to take credit for the stupidity of others (supplying, shipping and receiving).
I have other orders pending for these amplifiers and, upon being informed of subsequent delays in delivery, people usually respond with, "Well, you told me that you are only a third party. OK, I ordered it COD anyway... So I know I haven't been ripped off."
Mr. Swearengen also has been advised that, approximately two weeks after shippment, his amplifier had been returned to me as "undeliverable". It is being shipped yet again. Questions? Feel free to contact me.
What would you want to bet that the amplifier either comes back "undeliverabl again, or (even more within the thought patterns of Mr. Swearengen) he claims that it doesn't work? ((Of course, AFTER connecting it to an improper load, overvoltage, overdrive, etc.)
Either that, or soon you'll all hear a new unlicensed FM station located at 116651 Addison Rd. Apt. 2602, Dallas Texas announcing to the world that they've been ripped off on the very amplifier that they claim to have been ripped off over.
It all fits into the equation and Mr. Swearengen's general outlook.

This radio is double the price it should sell for. If you ask any Ham store they will agree that they have sold few due to the high price. Drake could sell in volume and get the price down if they were not so high priced.

Source record: 171313

Hi Adriaan,

When I was completing design of the MFJ-9406 two summers ago, I used my prototype during the June-July sporadic-E openings to work many European and Central-American stations. The receiver IF is fairly tight--tighter than many multi-mode rigs with inexpensive 10.7 MHz filtering, and the receiver has sufficient sensitivity and low NF to pull in weak double-hop stations down in the noise. In fact, the GaAsFet preamp in my Mirage A1015 amplifier provides no audible improvement in noise figure whatsoever over the MRF-901 preamp built into the 9406.

The only real drawback for DXers with a simple rig like this is its analog dial--it is difficult to QSY to a precise frequency--or monitor a pre-arranged sked frequency--and hit it with dead-on accuracy. You can tune onto a calling frequency using the VFO scale and hear any activity that comes up--but odds are, you'll have to tune the station in to clarify the speech once it appears. Also, when you "go up 10", it my end up being 9 or 11! On the other hand, the fast tuning rate is excellent for scanning the band and spotting activity. Digital VFO rigs are much slower and more awkward for this purpose.

For serious DX work, 10 Watts is minimal power. I run a brick to boost output to 160 Watts. Also, I normally use a pair of stacked 3-element beams for about 9-dB antenna gain. I designed the transmit IF for DXing more than rag-chewing--it has a high level of fast-rate speech compression to keep intellegibility high under marginal conditions or for breaking pileups. I've found this really helps

FInally, the rig will work CW with the optional adapter--something I'd strongly recommend for DXing on Six. You don't have to switch modes to go on CW--just grab the key and start sending.

Since I designed the radio, I doubt I view it with the same "cold" objectivity other might. However, I love to chase DX on six meters, and I literally designed the 9406 "on the air" with that activity in mind.

400. FT-1000&Log Windows 2.0

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-04 00:00:00 UTC
From: jjm@shore.net
Message-ID: <5pj00q$bta@fridge-nf0.shore.net>
Source record: 171317

Is anyone using AEA Log Windows v2.0 with Win95 and an FT-1000D? I can get the VFO tracking to work fine howsome-ever the mode will not track. It remains in LSB. If I change it and do no press the ENTER key it will change back to LSB on the next poll (every 3 sec.). If I do press the ENTER key it will stop any automatic updating of the rest of the record.

The firmware version in the FT-1000 is 6.0. Using the FIF-232C interface. I'm just wondering if this is a Win95 incompatibility thing since LW 2.0 was written for Win 3.1 and greater with Win95 being just a little (NOT!) different than Windows 3.x.

Ira (WA1W) are you around? :)

I know I've seen posts from "Squeak" from AES, maybe he can shed some light on what happend to Clearwater???

My sis-in-law lives in St Pete so when I visit I have run up to Clearwater store to touch and feel the goodies. Maybe it's temp and they will have a better shop in that area. Or maybe they had only he touch and feelers come in and couldn't afford the rent... I havn't been there is about 5 years but it was good to know where it was!

No argument required. Just say it to yourself.....
$1,500.00 for a 2 meter CB????
It is so obsurd, almost comical.
When I got the brochure in the mail, I laughed.
Not because of the price, but the thought that
somewhere out there someone might buy one!!

There is no adjustment for the display. Likely the radio is a bit off
frequency. I think C-138 is the main trimmer on the PLL board. Set
the radio in CW or AM and use a good frequency counter to make the
adjustment. Also the pass band tuning oscillator could have an
effect. Look at www.icomamericw.com for a FAQ of service issues on
the IC-735.

Hi Rick.

I have the EZ clone and have used it. I guess it will work out ok but
I do not think they should have released it yet. There is no way to
print out your Information for the Channel storage information. Also
there is NO help with the program. If they fix these 2 things It will
work just great...

Hope this helps

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Loking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

407. Yaesu VX1R - Impressions & memory question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-04 00:00:00 UTC
From: dedger@aol.com
Message-ID: <19970704151700.LAA03863@ladder01.news.aol.com>
Source record: 171324

This is probably the HT I have wanted for years. My first impressions are all positive regarding receive quality, sensitivity generally, battery life, and even transmit power which I worried about. The 500mw gets me into a lot of repeaters.
One gripe: I entered an 800 mhz public service freq which I receive well on my Standard 508A and discovered that the Yaesu can't hear it at all, I suspect because the stock antenna is poor at 800 mhz. No sweat because there is not much traffic on that freq anyway. Well, when I tried to over-write the freq with a UHF freq, I found I couldnot do it. It seems the rig will only let you replace an existing memory with one on the same "band". Does anyone know how to either:
1. delete a single memory channel, or
2. replace a memory on one band with a freq on another?
Some folks had commented that the out of band receive on 460 was not too good. I did side by side tests with several other receivers and can report that only my Standard 508A comes close to equaling the sensitivity of the VX1R. Quite a nice package and perfect for carrying on business trips I take around the world. This radio is so small, it will never get a second look at customs. In fact, I can just pop the antenna off and carry it in my pocket like a pager.
Another question: Does the battery have to be full discharged before recharging? Anyone know how to care for this type of pack?
73, Dave AA5NU

Unfortunately, that may be just the first of many closings this year.
There is no demand for "local" stores anymore, except to look and ask
questions, then order out of state to save the sales tax. Ultimately,
there will probably only be 15-20 stores in the entire countty, if
present trends continue, IMHO.

Does any one know anything about these radios? What is the real dope? How dependable are they? What about service and support? I have worked thousands of stations and I do not believe anybody was using this rig. Maybe most important, are there any notable problems and/or bugs. They certainly are a nice looking radio with a display a bit less cluttered than say the 1000MP.

I guess we should support our local srores if we want them to stick
around. Also, since the Radios are Big $$$$ purchases it would be great
if the Ham stores would be exempt from sales tax. Basically, most hams
are frugal. The store can send the radio out of state and not chat=rge
sales tax. Why not make an exception for Ham equipment purchased in

STATE. The revenue would support a salary of a few ham salesman and they in turn would pay taxes on their income. If things don't change most guys will go to the Ham store...look and play with the BIG $$$ radio... ask lots of questions....and order from an out of state chain.

Sorry for the spelling mistakes. Basically I don't want Hams ruining
their radios and getting mad at me. If you want all the mods I can send
them to you. As I said I have done the SUPER WIDE TRANSMIT MOD and it
works. Gary Fiber from Icom says to do the SEMI WIDE TX MOD to keep the
radio under warranty. I have been trying to support You guys in SALEM
but these ESTATE SALES are to GOOD to pass Up. It would be great if You
guys could ask any older Hams who are making Large Purchases as to their
health. If you find out that the guy has some sort of Cardiac Condition
or Cancer you could Relay the info to me. I could then make a great deal
soon as the the guy passes away....to avoid the other
HAM VULTURES from beating me to the Carcus. Right now I know of this guy
who has a IC-756 and is "ON HIS WAY OUT" (several strikes so far) I know
there are no hams in his family so I am going to make his wife an offer
right after the funeral (final expenses are high these days).

>new for $219 from AES?

>If you have one, are you happy with it?

Yes. Saves a lot of time when building antennas. We built 8 VHF jpoles and
tuned them in about ten minutes.

>Is it rugged enough?

It's test equipment, so you can't play football with it. I would recommend
spending the extra bucks for the case. I wouldn't recommend you drop it
off the roof.

>Any complaints about it, what could they have added to make it better?

Everything MFJ makes could have been made better. They aren't in
the better business, they are in the cheap business.

>How well does the dip meter addapter work?.

Great. I assume you mean the SWR meter. That's the only function on
the thing I use. I'm not convinced that the other meter 'Ohms' reads
anything relevant, nor am I convinced that the guy who wrote the manual
about all the other tricks it will do understands what he wrote.

>I am seriously considering this purchase, please give me any input you
>feel relevant.

If you build antennas, or it you spend time on the roof tuning antennas,
you need one. I would highly recommend it, for what it is - an inexpensive
piece of test equipment to determine the resonant frequency of an
antenna very quickly and easily.

Crossband repeat:

Set frequencies for both bands.

LOCK.

Power off.

Hold the Squelch function button (just above the PTT), the BAND and MAIN buttons all together while turning power ON. The radio will be in crossband repeat.

To exit crossband repeat:

Hold down the LOCK button for two seconds, UNLESS the unit is currently in use. If it's busy repeating when you want to turn it off, hold the SQUELCH function button while you press and hold the LOCK button.

masa@writemeNOSPAM.com said the following:
>I ordered one small accessory through AES (Amateur Electronic Supply).
>
>It took them three days to respond to my order. I didn't receive
>the product. I called the office a week later. They told me that
>they placed the order and they needed someone to go to the post
>office.
>Now, they tell me that they don't have any records of my order.
>I have received nothing. It's two weeks now.
>Beware of AES.

I've ordered many, many things from AES over the years and have never had a
problem of any kind. My last order was about as small an accessory as you
can get: a DC power cord for my Yaesu FT-530, about $7.00. Arrived via UPS
in the quoted time, just as expected.

In short, AES is very friendly and very knowledgeable, about the only complaint
I have is that they wouldn't buy my old Yaesu FT-411E to sell as used.
(Something about them already having three... ;-))

Will pay for copy of Barker & Williams (B&W) AV-25 multi-band vertical
mfg. in the 1980"s.B&W does not have a manual to make a copy from.
We have two of these less instructions.
This vertical was comprised of EMT conduit sections on three sides around
large PVC insulators; and covered 10-80 mtrs. .
Tnx in advance.

>afford to have a nice dualbander in every vehicle.

I found a site in the UK which at least had a line picture of the full powered booster - http://www.martin-lynch.co.uk They have it listed at slightly more cost than the HT, HRO list it for a similar amount to the HT. I would suspect that the $99 adaptor has no amplification, except maybe (hopefully) for the audio output. However I'm just guessing - - the amplified one looks to be a great idea - I was going to build something similar for my C508, hmmm perhaps it would be easier to save my pennies up and get the C510.
Could somone post the dimensions of the C510? Thanks.
Perhaps Standard Radio could update their site with this new model and details on it's matching accessories. (Hint, hint)

Kip Chatterson (kc5yqs@qsl.net) wrote:
: I am into homebrew antenna work and will probably continue in this
: effort for some time. Is the MFJ-259 antenna analyzer worth buying
: new for $219 from AES?

NO. Especially since you can get it for under $200 from HRO (and I believe
that they paid the shipping!

: If you have one, are you happy with it?
: Is it rugged enough?

I have only had mine for a couple of weeks, and have only given it a
limited amount of use. It seems well constructed, although it _looks_
typically MFJ. It looks like it would hold up to some abuse.

: Any complaints about it, what could they have added to make it better?

I like the plotting functions of the AEA SWR-121 device (which is $100
more, and which is currently unavailable while the new owners re-tool), and I
would like to have a serial link for storing data and plotting/printing on
the computer.

: How well does the dip meter addapter work?.

I haven't used it.

: I am seriously considering this purchase, please give me any input you
: feel relevant.

When you consider how many decades we all have stumbled around with little
more than an SWR bridge and a wattmeter, it's nice to find that some
useful antenna test equipment is being produced in a reasonable price range.

I've seen reviews of the MFJ-259 which point out that, while it's not a
lab-grade instrument, it's useful and it's not priced at lab-grade
prices.

There are a couple of reviews available on the Web: do a search on MFJ-259.

430. For Sale??? You Might Be In The Wrong Newsgroup...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-05 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <340057ef.2931582@NEWS1.MMS.NET>
Source record: 171139

Hi, rec.radio.amateur.equipment readers,

Please pardon my attempt to become a newsgroup cop, but the newsgroup rec.radio.amateur.equipment is attracting more and more "for sale" and "wanted to buy" posts, and I hope I can make an improvement by politely letting everyone know that this newsgroup is designed for the discussion of equipment. There is another newsgroup -- "rec.radio.swap" that is dedicated to ham radio equipment sales and trading. (I think because it doesn't have the title "amateur" in it, some hams might not recognize rec.radio.swap as an amateur radio newsgroup -- but it is.)

Why worry about this? Well, it's just much harder to look for subject lines of interest when you have to wade through the "for sales."

Over the past few weeks, I've sent private mail to many of the hams who posted "for sale" messages here, with the message printed above. I've received many replies, and thankfully none were angry. Many hams saw so many "for sales" here that they quite naturally assumed this was the place to post them. Traditionally, it is not. I see some value in returning to that tradition, since it makes scanning the newsgroup for more-or-less technical discussion much easier. It would also make buying and selling easier, with just one newsgroup to review.

This is a purely a personal message. I'm not connected with or acting in any official capacity for the internet, usenet or the newsgroup. Hopefully you will not take offense, and if you disagree, please feel free to follow your own conscience.

73,
Gary KN4AQ

>Phd too.

Hey Jimmy - I'm the KING OF RADIO. Any resemblance to Stan King's last name is a coincidence. And your logic that I am actually Stan King putting up wanted posters all over the internet to "deflect guilt" is, well, tenuous at best. I really don't understand how that works.

Vis-a-vis the "no name, no call" bit - I do not post using my identity so as to avoid hooking up personally with TOTAL ASSHOLES LIKE YOU. I used to post under my real name until I once made an innocuous comment that some guy interpreted to be "pro-code." I received a 2AM phone call at home demanding to know why I wanted to "kill the hobby." *That* was enough for me. I am a ham, Jimmy, but don't really want to get to know morons like you "up close and personal."

My post was made looking for information on finding the whereabouts of Stan King, W4KR ex-W8POZ. Any readers out there who have so much time on their hands that they want to verify the veracity of my statements may contact the Washtenaw County Circuit Court in Ann Arbor, Michigan and request a copy of the case number 94-3565-GC titled "Doty v. King."

The Kenwood TS-570D or TS-570S(HF+6m)is probably the most radio in the price class. I would recommend anyone that is thinking of upgrading and wants the most for their money to buy the Kenwood TS-570D/S.

If you like operate to operate CW, features include electronic keyer built-in, two keyer ports, CW auto zero beat tuning. The DSP filtering allows 50-1000hz variable filter widths. You can buy an optional (crystal)filter, but is not needed with the DSP. The CW memory recorder (included) proved to be very helpful during field day. I had the voice recorder installed (optional) and saved my voice for the CQ calling.

The DSP slope tuning really helped to narrow the bandwidth down from adjacent signals and made all the difference in the world in crowded band conditions.

Kenwood has free software on the ftp site for radio control.

The EzClone software is a straight forward and easy to use program. It does just what you would expect it to do. Upload and download your frequencies, including the Pl tone, offset and alpha numeric labeling. This is the biggest plus, it is so much easier to be able to type in the channel labels than entering it from the front panel.

ACS has an internet site to share files with others. Hopefully, enough people will take the time to upload files for their area. If you have other radios eg. Yaesu FT-51R, it will support cloning in a cross platform.

> curious and so am I. please mail me at mailto://clarkson@cwv.net
> Thanks, clark

The lithium battery may have depleted. Kenwood knows about this situation and has a solution. This situation was discovered during the manufacturing process.

If the lithium battery is installed without 13.8 volt power supply hooked up to the radio, the battery becomes depleted. Call Kenwood's customer service if you have this problem and they will send you a new battery and instructions for installation.

The TS-570D/S radios have a slide in battery holder and installation is easy. However, if you do not have a power source to the radio when you install the new battery, you may eventually have the same problem.

Call Kenwood's customer service for a replacement battery and instructions. This has already been corrected with any current radios, luckily it was discovered early.

> need to be done before this?

Try holding LAMP+KNOB at powering on (one or two times untill you read
ALRST, the press the funktion key. (the FT50 will reset now)
Then try to got into the alignment mod by holding LAMP+PTT+KNOB at powering on.
If this don't work try the second VFO, it will work 100%.

> Second, I too have been told my audio is down from the old trusty ft530.
> Seems others have this problem when out of the box. Any comments?

Yes, Yes, when fixing don't turn the pots more then 1/4 turn (better 1/8)
You will have distorsion (at the 1750Hz tone)if more then 1/4 turn.

> Third, If I read the files correctly, we could just do the MARS/CAP solder

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You can find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter

500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

I'll second that, and would additionally love to see the deletion of
_ALL_ the discussions entitled "So-and-so is a jerk". This is HAM
radio, and that is stuff that should be found on CB, not the supposedly
refined world of amateur radio.

446. Info Pls:Kenwood TK350?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-05 00:00:00 UTC
From: rt curtis <rtcurtis@bigfoot.com>
Message-ID: <33BEA3BE.9122FF70@bigfoot.com>
Source record: 171155

Can someone give me information on accessing the "field programmable" functions on the Kenwood TK-350 450-470 handheld radio? I know you can use a software and PC(which I am currently working on), but was wondering on this? I have a Tk 805DH mobile, and there is a way to function with the field programmable mode, by moving an internal jumper, and holding down two buttons while turning on the radio, to put it into the programming mode. Was curious about the TK-350 being the same..Any suggestions please..?

Thanks,
Randy W0HYS

448. comments on "booster" amplifier for use with handheld

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-05 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <5pmirj$3n9@redgreen.cs.ubc.ca>
Source record: 171157

At the moment, I have a FT-50 as my only transceiver, so it has to act as my "mobile" and "base" radio as well as a handheld. It's not bad with an external antenna in the car, much better with a bandpass filter (DCI) between it and the antenna.

Now I'm looking at trying to make things work reasonably at home. The handheld on its own barely reaches my normal 2 M repeater - not surprising since the path is not quite line of sight (there's a hill in between). I can hear the repeater pretty well. Switching to a half-wave antenna improves things a lot, but is impractical for continued use. So, I'm going to try installing a discone (that I have anyway) in the attic, and see how that works.

I do expect that I'll want a bit more transmit power, particularly with the antenna in the attic. MAHA makes a line of "booster" amplifiers that I can obtain locally. Some of them are "docking" amplifiers which have a dummy battery pack mounted as part of the amplifier - you remove the radio's own battery and mount the radio on the amplifier, which provides operating power and mechanical support. This seems like a nice setup.

I'd like to hear how people who have tried these MAHA boosters in particular, or other booster amps for handhelds, like them. Do they work well? Any problems?

Also, MAHA offers two different docking models. One is 2 m band only, but contains a GAsFet preamp for receive, while the other has no preamp but is a dual-band amplifier (2 m and 70 cm). Is the preamp likely to be useful? (The antenna has no gain and is under a roof). Or is dual-band TX a more worthwhile feature?

Thanks for any info,

Dave

455. Modify ICOM IC-02E to IC-02AT

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-05 00:00:00 UTC
From: Le Piaf <evkeulen@pacbell.net>
Message-ID: <33BEEE63.42DF@pacbell.net>
Source record: 171164

I recently came from the Netherlands to the US to work in a company in Silicon Valley. I am a radio amateur and I brought my handheld ICOM IC-02E with me. This thing is configured for the European 2M band: 144-146MHz. I know there is an easy fix to extend it to the US 2M band but up to now I haven't been able to get it to work.
The first I did was looking at the schematic diagram where I found the diode matrix to configure the different types 02E, 02A, 02AT. And doing the modification towards an 02AT the display now works from 140-149.995MHz with steps of 5,10,15,20 or 25kHz, where I previously had 144-146MHz and steps of 12.5 and 25kHz. Only now the reciever is dead and when I push Transmit, the display starts flashing. I tried several other configurations but every time the range extends outside 144-146MHz, the transciever is blocked.

Am I forgetting or overlooking something here?????

I know it must be possible because when I bought the Transciever new in 1984 (!) the sales-guy offered me to do the modification but I thought it was best to leave the unit original. If only I would have known I would leave for the US 12 years later..... :-)

Hi Gary,

After spending quite a lot of time on various newsgroups, I have found that many self-appointed "cops" are not much tolerated. I do appreciate you sending me to the appropriate newsgroup. BTW, there are 2 other newsgoups listed on my server on this subject:

news:rec.radio.amateur.swap
news:rec.ham-radio.swap

Like many others before me, I saw many "for sale" and "want to buy" ads before I posted to the newsgroup, and assumed that it would be ok. As

of the time of this letter, my server has 253 messages from 6/23 to 7/5/97- 21% of the messages deal with "for sale" and "want to buy" ads. I subscribed to the newsgroup several weeks before posting, and never once saw a FAQ message concerning this NG's policies.

I commend your willingness to keep this NG straight, and keep it free from clutter. I suggest that in addition to emailing every person who posts a FS or WTB with your carbon copy letter, you should ask the rest of the readers of this NG if they would prefer not to see these type of messages. If it gets to be too severe, see if people would be interested in having this NG moderated.

Dear Mr. Masa,

International Air/PP shippments must be hand carried to the Post Office
with appropriate customs forms filled out. The small delays are easily
offset by the price advantage compared to other carriers such as
UPS/FEDEX etc. The biggest disadvantage is that the International Postal
Union is no where near as streamlined as the commercial Air Carriers
regarding Customs. You package is probably stuck in that huge Customs
center in Burnaby, BC.

Will trade Johnson KW Matchbox with SWR unit and manual.
It has been in storage since the mid-80's.

CONDITION:
Electrical VG
Mechanical VG
Appearance G

There is some paint wear, panel lettering fine, plastic face
on panel meter shows some hazing. No dents.

Want a Yeasu FRG-7 or FT-757 in VG condition. Other SS HF TVR
operating on 12Vdc considered. Eyeball trade preferred.

Will sell Matchbox for $250 + shipping (firm). No COD's.

Please reply by email to avatar@frii.com

Somebody wrote:
>How well does the dip meter addapter work?.

And somebody else replied:
Great. I assume you mean the SWR meter. That's the only function on
the thing I use.
<><><><><><><><><><><><><><><><><><><><><><><><><><><><>
No, I think he really did mean the dip meter adaptor. I have one and
it works, but not too well. I gave up on it and bought a Heath grid
dip meter at a swap meet. Much more satisfactory. I'd sell the
adaptor if anyone really wants it, but I wouldn't recommend it.

469. HELP!!! Emperor TS5010 Needs Modulation & Power Mods!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-05 00:00:00 UTC
From: postreply@newsgroup.com
Message-ID: <33bef1c5.6535458@news.citilink.com>
Source record: 171278

Can anyone help me with improving the performance of my 5010?
It is sorely lacking in modulation and power on all modes.
I realize that the easiest thing to do would be to use an amp,
but that just not a possibility at this time, so doing the work
on the radio itself is my only option.
Thanks in advance.
swfalcon@citilink.com

P.S.
My power source, coax and antenna system
are all in perfect shape. The radio just
needs help.

Real interesting, Gary. Must work nice out where county boundaries
follow a N/S or E/W survey line. But that must get a bit complicated
where boundaries follow a meandering river or other natural limit. Also,
won't they have to re-do things all over again when we finally go
metric? Finally, when the paramedics read their dispatch, they will
probably say, 80038 County Road 27?, Oh yeah, down by old Gary's, you
know, the place with all them antennas.

471. FT50 alignment/mods/

Newsgroup: rec.radio.amateur.equipment

From: davemar278@aol.com
Message-ID: <19970705073401.DAA21560@ladder01.news.aol.com>
Source record: 171280

Hello, all. Just got a new ft50 (and one for dear old dad as well)

tried the web page about the 50r and found it quite interesting, though not recently updated.

Has anyone had problems getting the radio into "alignment" mode? I can;'t seem to get it to work even with all the memories cleared. Does the mod need to be done before this?

Second, I too have been told my audio is down from the old trusty ft530. Seems others have this problem when out of the box. Any comments?

Third, If I read the files correctly, we could just do the MARS/CAP solder bridge mod and then do the software (ADMS) mods to get the radio into the FREE mod ("the mother of all mods"). Is this correct? Sounds Like a neat way to go. Does anyone have a few free band templates that I could use as I am pretty Hex illiterate? This would be great as i could probably remove solder......a resister may be a whole different ball game.

Fourth.....Any repository of ADMS frequency files out there? Would be nice to have such a place. Please do let me know if anyone has thought of this. I have seen the website with a few ft51 files.......not very up to date and not for the 50.

OK. Enough. Please do share and enlighten me.

475. Observations on the Alinco DJ-G5T

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-05 00:00:00 UTC
From: n2ah@sprynet.com
Message-ID: <868103601.1660@dejanews.com>
Source record: 171284

I've had my DJ-G5TH for over a week now and these are some of my observations.

General: Great radio loaded with features. Solid feel and nice appearance.

Channel Scope feature: interesting, but not very useful.

Receiver: The "left" receiver is seems far superior to the "right." Within the 430 - 460 MHz range they are about equal, but when you get up around 470 MHz and above, the left receiver has much better sensitivity. Also, in the VHF range the right receiver seems to suffer from strong signal overload. I put a NOAA WX freq (162.550) on both Left and Right receivers and it was perfect on the left, but unreadable on the right. ANYONE ELSE NOTICE THIS???

Transmitter: Good audio and power out. It has two PTT switches so you can select either high or low power easily. Or program high, medium, or low power for the main PTT switch.

Attenuator: A single keystroke toggles about 15 db of receive attenuation. This is very handy when driving through "intermod alley" with a roof-mounted antenna. (The radio is fairly immune to intermod by HT standards to begin with.) But if the signal you're trying to copy is marginal, it will probably disappear altogether with the attenuator on. Overall the attenuator is a very good feature in my opinion.

Battery: I don't have enough "miles" on it yet to say how it holds a charge. One intereting feature not mentioned in the literature: If you plug 13.8 volts into the external power jack, there is a "smart charger" in the radio that will "top off" the battery while the radio is operating off the external power. And the radio comes with a drop-in charger stand that charges the 9.6 volt battery (5W version) in 10 hours or less.

Skip Feature: If you lock out a channel for scanning, there is no indication on the display to denote this. So if you forget you locked out a channel (or did it accidentally) you might never know it.

Extended Receive: In the keylock mode, press #212. The radio will display the word "open." Press #212 again, and it displays the word "closed." In the closed mode UHF receive is 420-480 MHz; in open it's 400-512 MHz.

Volume/Squelch: Both are controlled by "up/down" switches. Easy to use on the "main" channel. But on the sub channel the F key has to be pressed as well.

That's my take on it. I'd be interested in hearing from other DJ-G5T users.

73,
Art N2AH

HF MOBILE NOISE ELIMINATION

In my experience, there are three parts to the job of installing HF mobile in a vehicle: Installing the radio, installing the antenna, and suppressing noise. Of the three, suppressing noise is probably the hardest.

The first question is what kind of noise you are experiencing. If it sounds like a popping noise, and gets louder when you accelerate, it is probably ignition noise. If it is a hash type noise, it is probably an electric motor. The engine fans on my Tercel were very bad, but only ran in traffic, so I just lived with it. I was told that .001uf caps, short leads, from the motor to ground would help, but never did it. Some electric fuel pumps can be very noisy.

One test to see if the noise is coming from the power cable or the antenna is to disconnect the antenna. If you still have noise, work on the power cable. If the noise goes away, the power is OK, focus on suppressing noise at the source. If you connect the radio power cable directly to the battery, you will probably not experience noise on the power cable. (Don't forget to fuse both plus and minus at the battery for safety). Heavy cable is advisable; I would not use anthing smaller than 12 ga, and some people use welding cable.

I assume here that you have broad-band noise across various bands. If you have a single frequency birdie, you probably have noise from the computer crystal.

You might check to be sure that you have resistor plugs and wires before starting more serious work. Also, be sure that your noise blanker is on, although most radios do not have super-effective noise blankers.

On a 1979 Honda Civic with points, I used resistor plugs and wires, which solved the problem, but meant that I had to change the points

every 5000 miles or so, as the iginition system was designed for resistor wires only, and if the ignition system was not perfect, the car ran poorly.

On a 1985 Toyota Tercel, I had tremendous luck suppressing ignition noise by buying heavy copper tubular braid, and slipping it over the spark plug wires. I built a copper box that covered most of the distributor, bonded the braid to the box, and then bonded the box to the block, keeping the wires short. This was a day and night improvement, and I never felt the need to do any more ignition noise suppression.

On a 1996 Subaru Legacy, I again built a copper box, and bought more tubular braid. However, I only got an improvement of about 2 S-units. I needed more, especially on 40 meters, so I ran two ground wires from the exhaust pipe to the chassis. This was probably worth more than 2 S-units, and finished the job to my satisfaction.

If you are systematic, you should be able to identify the source of any problems and correct them.

A couple of other notes on HF mobile installations. Don Johnson, W6AAQ wrote the book, 40+5 YEARS OF HF MOBILEERING. Try to get a copy. I use the Hustler antenna system, and find it adequate except on 75 m. If you plan to operate 75m, consider a WB5TYD Texas Bug Catcher or a Screwdriver antenna. Unless you have an automatic or remote tuning system, the antenna bandwidth on 75m will probably be only about 50kc or so. I have never invested the time and effort required to achieve a satisfactory 75m installation.

Good luck

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative >themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

Hmmmm
So, Dave. Any recommendations on a battery and charging system for this
nifty
little radio?/
NIMH are the way to go, just cant see spending more money for a darn
charger to go with each radio......
n0xlw
dave

>The charging circuit built into the radio is *not* a "smart charger";
it has no ability to sense the type of battery or the end of charging.
It *is* a constant-current source, so it supplies the same charging
current whether the battery voltage is currently 5 V (FNB-40 discharged)
or 10 V (FNB-41 near full charge). In that sense it's smarter than a
resistor.

But it can't tell that a higher-capacity pack is installed, so the
FNB-42 takes longer to charge.

The CA-15 charging stand also has a constant-current source in it,
but it puts out somewhat more current so the batteries charge faster.
Still the same current for all battery types, though.

The NC-50 is the only true smart charger that Yaesu sells for the
FT-50.

Message-ID: <868242968.10923@dejanews.com>
Source record: 171094

I have an IC-229H with an UT-51 unit. Somebody told me (and I checked) that the CPU locates or "sees" the unit by a short circuit between pins 1 and 2 of the J5 connector.

He told me also that, if I make a jumper between two pins on the J6, the CPU believes that the UT-55 exists and lets me send the DTMF pager codes.

I don't have the unit, but I would like to know what are the pins short-circuited to make the test. Anyone can take a look on his UT-55?

Regards

Message-ID: <33C06D34.348A@popd.ix.netcom.com>
Source record: 171098

My manual says that I can re-program the Home memory slot, but only it it is not the Priority channel.

Mine is set with 145.000 as H and Pri for vhf-ham band. Manual does not tell me to "unprioritize" a channel.

Anyone have the method for this, in simple steps??

Phil

That is an "add-on" for an old Drake ESR-24 satellite (TVRO)
receiver, to allow you to receive stereo audio from
(non-encrypted) satellites.

In this day and age, it has little or no value, probably ...

There is a newsgroup dedicated to TVRO ...
rec.video.satellite.tvro ... you might inquire there is
anyone is interested in it.

Good luck, and very 73!

The Sonoma County Radio Amateurs will be packing up their radio
equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

494. Dwindling Kenwood parts availability?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-06 00:00:00 UTC
From: abrayten@pen.k12.va.us
Message-ID: <ECw7qq.205F@pen.k12.va.us>
Source record: 171103

Hello,
About one year ago I had my TS-930 serviced through the
Virginia Beach authorized service center. The technician
indicated that because of the age of the rig (13 years at the
time), that he could not guarantee that parts would be
available in the future, and that it might be desirable to look
at newer equipment. A friend in the Richmond area who trades
heavily in amateur equipment was also told this. So, is this
concern just limited to the Virginia Beach Kenwood service
center, or are there other authorized service centers on the
west coast, or other places? How long do ICOM, YAESU and
TENTEC feel disposed to support their products?
Any responses will be much appreciated.

Drew

Just getting started in CW, I'm looking at a MFJ CW Transceiver.
Which is the best ban for a Tech+ sending accurately at 10wpm.. 40 or
15 meters?

Also, any better CW rig (moderately priced) than the above.

Thanks

I agree with all of this except for one thing. The extra 500hz cw filter
is a necessity for cw operation. The dsp is strictly an audio filter and
signals ajacent to your frequency will desense your receiver eventhough
they can't be heard. Get either the 500hz or the 270hz. I use the 500hz
here and it seems quite adaquate although there are times when the
sharper filter would help. you only get one space for extra filters.
The I.F. shift works extreemely well too.

>
>news:rec.radio.amateur.swap
>news:rec.ham-radio.swap

Those are bootleg groups. Rec.radio.amateur.swap hasn't passed the Big Eight newsgroup creation process so most servers won't carry it. A Big Eight group has to pass through a selection process involving a Call for Discussion and a Call for Votes. It must receive more than 50% of votes cast, and must win by at least 100 votes in order to be officially sanctioned. A net god from the usenet netnews Cabal will then issue a newsgroup creation control message for it. (Net gods are selected by the community of server sysops, the Cabal, to deal with this sort of thing.)

Now some server sysops are lazy and set up their systems to automatically honor a newsgroup creation control message, no matter who issues it. There are also forgers on usenet who delight in issuing bootleg newsgroup creation control messages. That's what happened with rec.radio.amateur.swap. It is the result of a bogus newsgroup creation control message. Most server sysops are a bit more paranoid and have such control messages delivered to them as Email, and do group creation manually to avoid creating bogus groups. It would appear that your server's sysop is one of the lazy ones.

The Rec.radio hierarchy was created through this voting process. That hierarchy was created to replace the old rec.ham-radio hierarchy during the Great Renaming (that was a major restructuring of usenet hierarchies which took place a few years ago). So any rec.ham-radio group is now bogus as well, and should have been removed from usenet servers when the rmgroup control message was issued for the rec.ham-radio hierarchy a long time ago. Server sysops are sometimes slackers, however, and don't delete bogus groups (they are almost universally paranoid enough to not let rmgroup control messages take effect automatically, otherwise usenet would disappear more than once a day as malicious forgers send out bogus rmgroup messages for real groups). So you may still find bits of the old ham-radio hierarchy hanging around on some servers.

Neither of these bogus groups will receive wide circulation, however, so you shouldn't use them. The approved group for buying and selling is rec.radio.swap. Posting there will give you universal circulation across usenet.

>Like many others before me, I saw many "for sale" and "want to buy" ads
>before I posted to the newsgroup, and assumed that it would be ok. As
>of the time of this letter, my server has 253 messages from 6/23 to

>7/5/97- 21% of the messages deal with "for sale" and "want to buy" ads.
>I subscribed to the newsgroup several weeks before posting, and never
>once saw a FAQ message concerning this NG's policies.

FAQs are posted to rec.radio.info periodically. That's a moderated newsgroup created for the purpose of propagating such informational postings. (The community voted to keep such periodic postings out of the regular discussion groups.) If you participate in the rec.radio hierarchy, you should subscribe to that group to get the periodic informational posts.

>I commend your willingness to keep this NG straight, and keep it free
>from clutter. I suggest that in addition to emailing every person who
>posts a FS or WTB with your carbon copy letter, you should ask the rest
>of the readers of this NG if they would prefer not to see these type of
>messages. If it gets to be too severe, see if people would be
>interested in having this NG moderated.

Moderating a newsgroup with a high volume of postings is a herculean task. It is extremely difficult to find a volunteer moderator who will get the posts out in a timely manner. And it is a thankless task as well. The amount of hate mail a moderator receives is staggering, even if he moderates with a light hand. Moderation should be considered a last resort. I think it is almost always better to self-moderate using article filters available in most competent newsreaders.

The Pin on the Diamond "Wire Whip" SMA connector does not work with the
ft-50. I would go with a COMET product.

There is a company called 'Trionyx Inc.' that makes a cigarette lighter cord to power the FT-50. I have one and it works fine. They are at 6775 North 550 East
Brownsburg, In. 46112... Telephone (317) 852-5544. They quote a list price of $19.95 but it may be less by mail. Hope this helps.

I have a very nice Kenwood SP-820 for $75 plus shipping. This is the matching Kenwood speaker that goes with the TS-820 transceiver. It is also the same size as the SP-230, so it could be used with other KW rigs such as the TS530 and TS830. 73, George.

511. HELP: out of band info for IC3SAT

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You can find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX

3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

What would be the best filter choice for RTTY and AMTOR these days?
Is 170 Hz shift prevalent on RTTY? Also, what's the 570's duty
cycle/derating factor for RTTY, assuming a continuous-duty power
supply?

Anyone have any ideas on a 733. yesterday when I turned it on all the display says is "ON" on the vhf side and thats it. Both the vhf & uhf green leds are lit and I can't turn it off. None of the buttons have any effect and tried the HARD RESET...nothing. The only way to turn it off is to pull the plug. I tried the "KENWOOD WEB SITE" which is about as useful as a football bat,to look for tech notes...nothing. If anybody has any simple fix before I call Kenwood tomarrow, I would appreciate it.

Hello All;
I am selling the Kenwood TS-440SAT with the optional PS-50 power
supply and optional Kenwood MC-60 amplified desk mic. All has less
then 5hours of use. I'm the 2nd owner. The 1st owner purchased this
unit not knowing about his qth's restrictions on no outside antenna
laws. Both of us are non-smokers..
Also all original paperwork, cartons, user's manual, covers
for the 440 & PS-50 & optional service manual are included. I have
the MFJ-1272BX tnc-microphone switchbox also if interested..
Asking $765 for TS-440SAT with both manuals, paperwork
cover & original carton. This unit has the auto
antenna tuner, been modified for "MARS" and the
optional 7 digit LED read out. Has 100 memories
plus much more.. We detail if interested
Asking $175 for PS-50 with cover and original carton
Asking $85 for Kenwood MC-60 desk mike
Asking $980.00 + shipping. For all the above Or Best Offer.
This is a must see hf setup and I would prefer any potential buyer
to see all the above before buying.. This is One Great Setup..
Reason for selling is strictly financial. Please re:me either through
Packet: N2RIF@WN2f.#SNJ.NJ.USA.NA
Or Better
Email: n2rif@amsat.org
My phone# is: (609) 386-9382 but sorry it is busy most of the time.
You can try though anytime from 10am to 10pm ET..
Thank you for reading my sale's bulletin.

This is mostly correct, but in fairness to Ralph Brandi and his
colleagues in the other radio-related newsgroups, the rec.radio.*
hierarchy began with rec.radio.shortwave and rec.radio.noncomm. It was
only about two years later, in early 1991, that the rec.ham-radio.*
newsgroups joined this better, hierarchical namespace by renaming
themselves to rec.radio.amateur.*.

>So any rec.ham-radio group is now bogus as well, and should have been

>informational posts.

I don't want to leave the implication here that one needs to read "yet another newsgroup" to get the information that they seek. Furthermore, I'm not sure to which "vote" that Gary is referring, because to my knowledge, any such vote actually came to quite the opposite conclusion. All bulletins and FAQ's posted to rec.radio.info are also cross-posted to (with followups directed to) an appropriate, unmoderated discussion newsgroup in the rec.radio.* hierarchy (e.g., FAQ's are crossposted to *.misc, Space Bulletins to *.space, DX Bulletins to *.dx, Buying and Selling Guides to rec.radio.swap, etc.). This was in the original charter when the newsgroup was proposed in late 1992, and continues to this day in rec.radio.info's submission policies (I assume that this is the case, because the current moderator, Brian Short K7ON, has not stated anything that contradicts this, and almost all postings to rec.radio.info continue to be cross-posted). This implies that if there are FAQ articles relevant to a given newsgroup, then you will likely find them in that newsgroup, and not have to hunt for them elsewhere.

The basic reason why some of these very informative FAQ articles, describing both the rec.radio.amateur.* newsgroups, and appropriate suggested guidelines for buying and selling radio-related items in rec.radio.swap, are invisible is because they have gone unposted to ANY newsgroup for some time now. The maintainer does not respond to my E-mail, and the articles are essentially abandoned, though you can view the most recent copies at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

There appears to be a wide-open opportunity for someone motivated to
take over maintenance of these articles and do them proper justice.
Any takers?

>>I commend your willingness to keep this NG straight, and keep it free
>>from clutter. I suggest that in addition to emailing every person who
>>posts a FS or WTB with your carbon copy letter, you should ask the rest
>>of the readers of this NG if they would prefer not to see these type of

>last resort. I think it is almost always better to self-moderate using
>article filters available in most competent newsreaders.

As always, not necessarily trying to beat up Gary here, it's just
convenient to follow up to his informative post with my two-cents :-).

This is a hot-button issue for me, as I'm currently getting raked over
the coals in rec.radio.amateur.misc by a small number of posters for
"playing moderator" with my (in my opinion) innocuous and
non-controversial new-user welcome letter. Despite the fact that no one
can seem to specifically criticize any of the contents, I've been
accused of being a loose cannon and operating contrary to the wishes and
consent of the newsgroup. In response to this, I have pointed out that
individuals like myself (as well as others) over the years have sought
consensus, support, and even team participation for various projects,
and such requests have largely gone unheeded. I'm doing what I feel is
objectively the right thing, and with the de-facto (by lack of
significant objection) consent of the newsgroup participants. I've also
been happy to consider polite feedback and incorporate constructive
suggestions. Individuals who disagree are welcome to make concrete,
practical, alternative suggestions (with the understanding that such
concrete suggestions often need concrete people to carry them out).

Over the years, suggestions about how to manage these newsgroups, and
improve their content, almost without exception have been along the
lines of:

"(Some indefinite third party, not me, who will magically drop out of the
sky) should..."

with the suggestions that follow the above preamble usually consisting
of one the following:

"...conduct polls to gauge newsgroup opinions about various things"
"...volunteer to maintain FAQ's"

"...serve on volunteer advisory committees"
"...create and manage moderated discussion newsgroups"

and then the matter gets dropped for want of such indefinite third parties. Furthermore, such suggestions usually ignore what is being done currently, as often the suggester clearly hasn't done sufficient research (for example, poll-takers, FAQ maintainers, and even an advisory committee for the rec.radio.amateur.* newsgroups do already exist). If you want to make the newsgroups better and more informative, you need to PERSONALLY get behind concrete projects to make it so, because (literally) no one else is going to do it. If you are sincerely interested, contact me or the rec.radio.amateur.* Working Group at rra-wg@theporch.com, and either volunteer, or ask us for suggestions about what would be good projects to do (resurrecting the above-mentioned dead FAQ postings would be a good start).

528. Motorola Ham HT AP-50????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-06 00:00:00 UTC
From: trinit69@idt.net.nospam
Message-ID: <trinit69-0507972010050001@ip102.lafayette.la.pub-ip.psi.net>
Source record: 171200

I tore an ad out of Nuts and Volts which advertises the Motorola AP50 ham HT.

Sorry, but I tore off the name of the company, but the phone number is
714-543-6800.

I have not seen this HT anywhere else. Does anyone have experience
with the AP50? Is it a for-sale-in-USA product?

I think it is a variant of the Radius CP50 commercial rig.

Comments anyone?

>around $3000 or under.
>Keith Javery kjave@iserv.net
>WD4MTV

Well, it's probably not under $3000.00, unless you opt for the 91B,
but Alpha, having owned more than five (5) of them, are most
definitely hard to beat, performance and with a FOUR (4) year
warranty, a few dollars may go a long way. I presently have an 89 on
order, expect it to be complete at the end of July or first week in
August. I'm sure there are those that will disagree, due to the posts
I've encountered reading the newsgroups, but I assure you considering
the source is the key to understanding why! Good luck in your
decision to replace the TL-922, a pretty good amp.in it's day.

I have visited it. It does have some interesting stuff. But most people manage to use up one line of .signature with a pointer to their web site, in a total of 4 lines or less of .signature. Masa uses 16, and I don't see how all that extra text contributes any extra value to the reader. I'm sure it makes Masa feel better, though.

531. Help w/Baycom to Yeasu50

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-06 00:00:00 UTC
From: alvin.mahler@lagn.com
Message-ID: <35622004@lagn.com>
Source record: 171203

I can't get my Yeasu 50R to work with my Baycom Packet Modem.
I can get it to recieve but the transmit does not work.
It will transmit once and then the Baycom software will get stuck in SEND and
will not transmit any more .

Confused, Alvin N5vzh

The radio works fine when powered from 12-14 V, and charges the batteries too. To connect to a standalone 12 V battery, or a regulated power supply, you can use the Yaesu E-DC-6 external DC cord. But if you're going to use it in the car with the engine running, you're supposed to use the E-DC-5B cigarette lighter adapter instead - it has an internal filter circuit.

533. HELP!!! Emperor TS5010 Needs Modulation & Power Mods!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-06 00:00:00 UTC
From: postreply@newsgroup.com
Message-ID: <33c2e96f.91219758@news.citilink.com>
Source record: 171205

Can anyone help me with improving the performance
of my 5010?
It is sorely lacking in modulation and power on
all modes.
I realize that the easiest thing to do would be to
use an amp,
but that just not a possibility at this time, so
doing the work
on the radio itself is my only option.
Thanks in advance.
swfalcon@citilink.com

P.S.
My power source, coax and antenna system
are all in perfect shape. The radio just
needs help.

535. Ignition Noise Probs: suggestions?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-06 00:00:00 UTC
From: Larry and Andrea Gagnon <gagnon@gagnon.u-net.com>
Message-ID: <33BFE97D.2620@gagnon.u-net.com>
Source record: 171207

Hello. I have severe ignition noise problems in an older, basic 1992 GM car here in Great Britain. No electronic ignition, no fuel injection. New resistor type plugs and new suppresion cables didn't help. My 12V line goes direct to the battery which is very close to the ignition coil so I suspect it just picks up all the shit there. I draw up to 20 amps on transmit so a line filter is a bit difficult to build. Any ideas would be greatly appreciated...currently most radios unuseable while car is on! Thanks and 73's Larry MW0AWC

546. Extended Transmit Ic-W32a mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-06 00:00:00 UTC
From: ldkirby@freenet.columbus.oh.us
Message-ID: <5pot9i$qek@login.freenet.columbus.oh.us>
Source record: 171218

HI fellow IC-W32a owners! I have after several hours of playing with this little jewel came up with a keyboard mod that opens up the 800 and 300mhz receive.

Put both bands in VFO mode and turn off the radio. Now press and hold the Squelch/Monitor button (just above the PTT) while pressing and holding the Band/Chng button now while still holding these buttons power on the radio. you should see all display icons are on untill you release the Squelch/Monitor and Band/Chng buttons.

Now if you switch to the UHF band and depress the Band/Chng button once you should see 800mhz and if you depress it 3 times you should see 300mhz. 800mhz goes from 800 to 823.99 (depending on what step sizes selected ie 10 khz or 12.5 khz or 25khz etc) then resumes 849 to 999mhz. 300mhz goes from 300 to 399.99mhz(again depending on step size).

Also if you depress the VFO/Mhz key for about 2 sec the khz digits dissapear and you can quickly go thru the 1 Mhz area using the encoder on top of the radio but if you press and hold the VFO/Mhz button a second time for 2 sec the 1 Mhz number will dissapear also and then you can quickly go thru the 10 Mhz area with the encoders.

These frequencies can be scanned and stored in the UHF memories.
If you have been playing and have accidently turned on un-wanted functions (like a friend of mine) you can start all over again with a master reset, but this reset eveything including memories. You do not need to reset the radio to turn on this mod or have the extended transmit hardware mod to do this. If you find you do need to do a master reset sometime you will need to activate this mod again to get it back. This mod also extends all receive areas. Vhf was 108mhz to 199.99mhz.

You will also experiance some "birdies", "images" and PLL dropouts in areas. I do not have access to European models so I have not tried this on them. So if you have an IC-W32"E" model and this works please add to this post.

Enjoy! I'Gor aka Larry KA4MWP

Thanks for the reply. Someone else e-mailed and said it works for them,
but they are using an external keyer, not the internal one. And, yes, I
to never use this rig for cross band splits (my IC765 works perfect
doing
cross band split).

Hello guys,
I want to buy a transverter for 144 Mhz for my TS-820S.
The transverter is the TV/502S. If anyone has one of these, please tell me something, about prices and shipment.
Thanks to all. Bye. Keep in touch, everybody...

Andre Antunes

Hi Dave, 15m is usually open only during the day and sometimes not
even then. 40m would probably be best although I only hear a couple
of CW stations from 7.10 to 7.15 at night. The QRP activity is
around 7.04 and is quite heavy.

I recall seeing a reference to a method for "repairing" 3-500's that had developed a violet discharge, but had not actually gone soft. It involved keeping the filament lit for a long period and (I think) gradually increasing the plate voltage.

Has anyone had any experience with this. Or any comments on the liklihood that it would work?

Marty, K1FHR

Subject: !! Alcatraz Mini-DXpedition !!

The Sonoma County Radio Amateurs will be packing up their radio
equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

There a a number of reasons why not to use the adaptor.BTW,mine only cost $5.95,still no bargain,kind of like the replacement antennas...
The reasons...
1.Looks Bad!
2.The SMA antennas have a "shoulder" that prevents the connector from being broken off the radio,and helps prevent stress on the connector.The BNC ducks and whips are pretty heavily built and wouldn't inspire confidence due to excessive bulk.If the radio is dropped,the antenna connector will probably break.....

My Standard C510A will be using some kind of replacement,but the damn things cost way too much.....Barry N8PVX

Use SMA to STANDARD BNC adapter and FT530 antenna, and you have almost
the perfekt match, it seems to me that this is a better combination than
the orginal antenna...

From: "Bob Snyder" <rsnyder@pcisys.net>
Subject: Help Identify This Key.

It's a black military(?) key, large knob about 1" high, larger at the top.
There is a base below the knob that is about 1" round. From the knob. the
lever goes straight back for about 1.5" with a 1/4" rise. Then the lever
becomes horse shoe shaped. In between the horse shoe are the adjustment
screws. Behind that is a black plastic cap that covers the connectors. On
the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

From: moliveri@geocities.com
Subject: UT-55 DTMF unit

I have an IC-229H with an UT-51 unit. Somebody told me (and I checked) that the CPU locates or "sees" the unit by a short circuit between pins 1 and 2 of the J5 connector.

He told me also that, if I make a jumper between two pins on the J6, the CPU believes that the UT-55 exists and lets me send the DTMF pager codes.

I don't have the unit, but I would like to know what are the pins short-circuited to make the test. Anyone can take a look on his UT-55?

Regards

Maurizio Oliveri

I found a bug with using PL tones, Has any one else hit this?
How do I communicate this with Yaesu?

If I set two different memory locations to the same frequency with
different PL tones and then try to scan them both. Very often (> 50%)
of the time either correct PL will not open the squelch. It seems if
it hits the correct channel first it gets through, but if it it hits
the other first the squelch will never open & it will just keep
scanning both channels.

571. Yaesu FT-901 repair in Co. Springs area?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: davide70@aol.com
Message-ID: <19970707172600.NAA17380@ladder01.news.aol.com>
Source record: 171038

I recently purchased a Yaesu FT-901DM at a swap fest. Receive is fine but I can't get it to produce any power on send. I don't have the know-how or equipment to try to fix this myself. Does anyone know of a repair shop in the Colorado Springs area (incl. Denver and Pueblo, I suppose) that could fix this thing? Any other ideas on how to get it repaired?

Tnx es 73,

Dave KB0YSN

575. Kenwood CW filter help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: Peter Orban <Peter.Orban@nrc.ca>
Message-ID: <33C128DE.41C6@nrc.ca>
Source record: 171042

I obtained a 455KHz 250Hz bw Kenwood CW filter that I would like to use in a TS 450 transceiver. That radio uses the -1 type filters, the filters are attached to a small pcb for easy installation. I was given a pcb like that, and attached my filter to it. The TS 450 does not recognize my filter. My guess is that some of the pins on the pbc are used for "encoding" the filter type that the radio recognizes.
I am not sure from where my pcb came from (what filter did it have on it before it was given to me), but I would appreciate if someone with factory 250Hz or 500Hz bw 455KHz filter would look at the filter pcb and would give the wiring of the individual pins.

Thank you very much for your help, Peter

577. New to 6M - Please Recommend Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: w6uv@nospam.wco.com
Message-ID: <33c13120.1306868297@news.wco.com>
Source record: 171044

I'm just getting into 6 meters and I'm primarily interested in weak-signal SSB and CW modes.

I'm thinking about getting an Icom IC-706 Mk 2. Is this a reasonable rig for 6M, or would I be better off getting a dedicated 6M-only rig? I don't currently have an HF rig or a multi-mode 2M rig, so a transverter isn't a good option.

Any and all recommendations are welcomed.

Source record: 171046

I really don't see a problem with people selling and buying stuff in this newsgroup. Maybe it could be a policy here that if they want to sell something, they put FS in the beginning of the subject and if they want to buy, they put WTB in the front of the subject. That way, if you're not interested in buying or selling, you can just go on to the next subject line. I don't think you'll ever get people to stop buying and selling in here though. To tell you the truth, that's exactly why I come to this newsgroup.
I see that a couple of replies get right into the main problem of ham radio and that's all the crap that's is being said on the higher licensed bands. That sure makes me want to take the time to learn code so I can run right out, spend $1000's on a new rig and antenna. Boy, I can't wait. My clean 2 meter conversations just aren't cutting it anymore. We just don't seem to have problems like that here in Alaska. I guess we just run a clean net up here.
Well, those are just my opinions and I'm sure you'll hear a lot more.

Source record: 171048

I've had one since Thursday. I don't have anything bad to say about it yet and I'm a tough customer. The keyer is absolutely GREAT. The QSK is very smooth with no funny pops or clicks. Audio is very clear on SSB and especially AM with a big speaker. I got the 500hz filter. I suppose having more filter slots than just one would be a nice advantage. Guess we will see that when the 570 MarkII comes out :*)

I do hear a bit of audio hiss from the af stage. Not really bad but it doesn't make sense since the cheapest stereos dont have this problem. Why do ham rigs have to have 10% distortion???? My el-cheapo walkman has less than 1%.

>
> N1MSV

Hi Gareth! I have a JST-245 that I bought almost two years ago. It has been a dependable radio so far with a few bugs that have been fixed.

I have a very early version that had the first release firmware that had a goofy situation wherein if a narrow bandwidth receive filter (1.8 KHz) was selected, the radio transmitted through it too! That was fixed with a new prom.

The original calibration of the noise blanker (circa '95) was pretty disappointing. I use the radio as an IF for VHF/UHF transverters and therefore suffer from the dreaded "line noise" on occasion. The original noise-blanker was a poor performer in reducing the VHF line noise. However, after I installed the new component values from the "noise-blanker mod" in my radio, the blanker has turned out to be the BEST noise blanker I have ever used -- period. I really treasure how well it cuts down any lingering line noise on 6 or 2 meters (even 432, if the noise is bad enough) during contests.

I should mention that I also have an FT-1000MP (which replaced an FT-1000D) that I use primarily for chasing DX, where the dual, stereo receivers are really helpful. The '1000MP has a great sounding receiver and is a terrific HF rig. That said, I was listening to EA3OT and some other "broadcast quality" signals on 20 the other night, with the '1000MP on one antenna and the JST-245 on another antenna. I found that I prefered the sound of the '245 to the '1000MP, as reproduced through their respective matching speakers. The '245 is really a great sounding radio and I like listening to it for long periods.

If you have any specific questions that I didn't answer, let me know and I'll be happy to answer them.

584. mobile HF antenna advice

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: Jeff Kilgore <kilgore@tivoli.com>
Message-ID: <33C13830.42C1@tivoli.com>
Source record: 171051

I just bought an Icom IC-706 MkII and am still looking into antenna possibilities for an HF mobile setup. The radio will be installed in a Camaro, so there's not a lot of room, and I don't want to drill holes or stick a large tri-mag mount on the car, since I just bought it a couple of weeks ago. I have considered several mounting possibilities, but am leaning toward some type of frame mount. I also would prefer not to have a 6' or 8' antenna, since I would have to remove it to park in my garage at home and in the parking garage at work. I don't mind trading some efficiency for something more convenient that I can leave on all the time.

I am currently leaning toward the Outbacker Stealth Plus, which is 4' tall and covers 80-2 meters, including the WARC bands. Does anyone have any comments, good or bad, about this antenna, or perhaps other antenna recommendations? Again, I am not looking for the best possible antenna, but something that is functional, but relatively unobtrusive and convenient. I will probably primarily be operating on 40 and 20 meters, and I'm not going to be doing any DXing or contesting while mobile. I also plan on doing some mobile SWLing.

Thanks for any comments/advice anyone can offer.

73,
Jeff Kilgore, KC1MK

From: Saar Maoz <NsOmSaPoAzM@us.oracle.com>
Message-ID: <33C150BF.41C6@us.oracle.com>
Source record: 171054

All,

As promised, I am posting the outcome of my FT-8000 repair for audio problem. Original compaint was:

"NO AUDIO NOW. PREVIOUSLY AUDIO ON UHF SIDE WAS VERY LOW"

in two weeks it came back from Yaesu(via HRO) with this:

"REPLACED R76 TO 27 OHMS
REPAIRED OPEN DC LINE ON RX VCC"

now the radio is BETTER than it was NEW! Both sides are equally loud.

If you have this problem with volume mismatch, I would recommend sending it for a quick repair... I ignored the problem, until one day the audio completely went away, then I had to send it...

good luck to you all.

Saar.

588. re: Maha/Yaesu charger compatability answers!

Newsgroup: rec.radio.amateur.equipment

From: RonL-nospam-@macconnect.com
Message-ID: <5preea$gq6@drn.zippo.com>
Source record: 171055

I called Maha this AM. They said that their NiMH Yaesu-compatible batteries can be charged by the Yaesu NC-50 (dual with interchangable cups) but should be left in for 2 hours instead of 1 hr to get the last 10%. They did extensive testing to assure compatability. Via HRO however, I am told that Yaesu specifically states that their charger will *not* charge NiMH batteries.

Their own charger will charge Yeasu's or their batts, but one at a time and only the specific batteries you buy the unit for (no interchangable cups). Maha also says that if you have the time, a trickle charger will make any NiMH or Nicad last a lot longer.

> with which include CLearwater, Milwaukee, and Las Vegas.

You won't get to deal with AES Clearwater anymore. They closed up shop last Thursday with no notice to anyone. They didn't even notify their employees. Their salesmen arrived to be told the store was closed, and to go home.

I've dealt with AES Clearwater over the last few years and have had no problems, though when they were on Drew Street in Clearwater, they never had enough stock and often had to order from Orlando. In the spring of 96 they moved to a much nicer store along US19 and there were a bit slow stocking the shelves but Rick, N9PMR, came down to be manager this spring and did a great job. He helped at our local field day, and even loaned us equiptment including a TS-950SDX, TS-970 and a IC-756 as well as power supplies and antennas.

I shopped at AES Clearwater because it was local. I work 8 blocks east of the former store location and dropped in often and bought small things, from a new rubber duckies, to magazines. I also did my share of bigger ticket items. I bought a HF Rig in March, a dual band mobile in February and just two weeks ago spent $130 in antenna accessories for my new car.

Now I guess I'll be shopping mail order -- and I won't be going to Orlando.

AES just walked out of the Tampa Bay area, therefore I doubt few Tampa Bay area amateurs will be buying much mail order from AES. I was about to walk in and buy a Yaesu VX-1R or a mobile rig for my car. Their loss.

Actually, the "F" key must be pressed while entering "#212" with the keypad locked. Sorry, I forgot that in the
original post.

597. AT-160 with IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: glickj@rpi.edu
Message-ID: <868315923.31289@dejanews.com>
Source record: 171064

Does anyone know if the OPC-599 (a 7+8-pin to 13-pin adapter) is required to use the AT-160 with the IC-706. Also, is this antenna tuner suitable for mobile operation?

Thanks!!

598. FT50 & DPL

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: Harvey Klein <hklein@sprynet.com>
Message-ID: <33C183F7.37FD@sprynet.com>
Source record: 171065

Does anyone know how to make the FT50 transmit with one DPL and receive either with no DPL or another DPL.

I know this can be done with standard PL.

Please email me with any ideas, even programming 2 memeory channels with differant DPLs and switching them. The trick is how to make them switch automaticaly?

Thanks & 73

599. FS: Yaesu filters & accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: RJA <k1cc@mindspring.com>
Message-ID: <33C1885D.C8710295@mindspring.com>

Body handling: HTML body converted to readable text

I have the following Yaesu filters and accessories for sale,
all are new (except as marked) in original boxes and have
never been installed.

Yaesu DVS-2 $195 FT-1000, 1000MP
Yaesu TCXO-2 $135 FT-990
Yaesu YF-114CN (XF-B unit)
(8.2M - 250 Hz) (new) $120 FT-1000MP
Yaesu XF-110C (same as YF-100) $120 FT-890,900
Yaesu XF-110C (same as YF-100) (used) $105 FT-890,900
Yaesu XF-455MC $120 FT-1000, 726R
Yaesu XF-109C $100 FT-990/DC
Yaesu YF-110C (XF-E unit) (500 Hz) $120 FT-1000,FRG-100B
Yaesu XF-D unit (455K SSB-N) $120 FT-1000
Yaesu MD-1C8 desk microphone $100 FT-1000, FT-990,
FT-840, FT-736R

I am looking for the following accessories for an FT-1000
which I would like to trade for any of the above:

BPF-1 bandpass filter
TCXO-1
XF-C 2.4 kHz SSB filter for 455
YF-110CN (XF-F unit) (250 Hz)

600. TS-830 Freq Jump

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: wormser@osiris.cso.uiuc.edu
Message-ID: <868324320.6130@dejanews.com>
Source record: 171067
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Source record: 171072

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see Sept 96 QST for review). One advantage is that it has a tilt-over hinge at the basew for garaging. Apparently it can be used with a trunk-lip mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've used an Outbacker on 20 m and prefer the Hamsticks. And not sure it will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

Phil W7OX

608. Yaesu VX-1R Question/Comment

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: "John D. Nell" <jnell@ezl.com>
Message-ID: <33C1B570.7E@ezl.com>
Source record: 171075

OK, I've had my VX-1R now for about a week and can not figure out how to enter independent TX/RX frequencies in a single memory across the VHF and UHF bands. Has anyone done that yet?

I can enter an "odd split" in the SAME band, vhf OR uhf, but not into a memory channel which lets me "transmit on UHF" and "receive on VHF". I use my Standard C508A this way all the time to "mobile extend". I was hoping to "shrink" my everyday HT even further with this little gem.

I guess if I don't hear about how it's done soon, this little baby will be for sale and the Standard C510 will take it's place in my HT corral!

BTW, I agree with whomever said Yaesu screwed up the "scanning" function of this HT. Only scan in a single band, come on....get with the plan, Stan!

Oh, one last thing... where's the VX-1R FAQ section? I don't have all day to surf the net looking for facts and fiction...but this Newsgroup is just fine :)

Hi all,

My homepage is getting bigger and will continue to do so until
Telenordia tell me I have run out of disk space on the server.
You can find my homepage at:

http://user.tninet.se/~acz732k/

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PS for the above
5 watt CW TX - dead easy to build
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX

3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V&#65533;sby.

Drew, We need to talk! I,ve got 3 TS-930s! I love 'em! I just sold my Drake Line and bought them. Two work great, and the 3rd one needs the RF Driver stage fixed. (I bought it that way for $500.) I replaced the parts and fired it up. One of the transistors ($35 apiece) burst open. This was also the way I found the circuit when I first opened it up after bringing it home-one of the transistors was busted open.

Evidently I overlooked something or the new transistor was defective. I talked to a ham in Rocky Mount who had a 930 that developed a problem on the Digital Display Board and he was told that there is no replacement boards available so he dumped his.

Point is, I want all the information I can get about parts availability and I will share what info I have with you.

* Use it as a paper weight
* Throw it at the neighbor's cat when it howls in the middle of the
night.
* Play catch with it
* Use it as a counter weight when throwing a line in a tree for an
antenna
* Apply 110VAC to it and watch it explode
* Put it in a package wrapped as a gift and leave it on a bus bench
* Put it under the front edge of your rig to make the dial more easily
turned
* Charge 100,000 MFd to 20 volts and discharge it through it to
rejuvenate the cells (wear safety glasses)
* Disassemble it to see how it's put together
* Offer it for postage expenses to somebody who wants to try to put new
cells in it
* Sell it to somebody on rec.radio.swap, saying that it's unused and
works fine and then read the flames start and the ranting and raving
* and best yet...throw it away

(Sorry, but I just couldn't resist...ask a leading question and you have
to expect a stupid answer!!!)

It's a black military(?) key, large knob about 1" high, larger at the top. There is a base below the knob that is about 1" round. From the knob. the lever goes straight back for about 1.5" with a 1/4" rise. Then the lever becomes horse shoe shaped. In between the horse shoe are the adjustment screws. Behind that is a black plastic cap that covers the connectors. On the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

>
> My 2 cents...
> --
> Bryan ks4hr@injersey.com
>
There a a number of reasons why not to use the adaptor.BTW,mine only cost $5.95,still no bargain,kind of like the replacement antennas...
The reasons...
1.Looks Bad!
2.The SMA antennas have a "shoulder" that prevents the connector from being broken off the radio,and helps prevent stress on the connector.The BNC ducks and whips are pretty heavily built and wouldn't inspire confidence due to excessive bulk.If the radio is dropped,the antenna connector will probably break.....

My Standard C510A will be using some kind of replacement,but the damn things cost way too much.....Barry N8PVX

I don't buy a lot of radio gear at present, but when I do...two sources. Maryland Radio Center, they are good and they are close to work. I have recently bought stuff from AES and have had excellent service. My record with AES goes back to 1955 when the Roots of AES, Harris Radio (Harris Sterman was the father of Terry Sterman) was located in two Wisconsin Cities, Manitowoc, WI (My home town) and Fond du Lac which had a bigger store. Terry was in the business while in High School and handled the Amateur business (Harris was basically a supplier to TV repairmen in my town). Terry, even then, the King of Traders bent over backwards to help an even younger teen (me) get on the air and always sought to give me an equitable deal...perhaps more than equitable from my perspective. He got credit for me when I didn't have any (I bought a Viking Ranger kit - $279) when I was 16 and he took my stuff in trade, a fair deal for both of us and granted me credit in my own name. Teens did not normally have credit cards in the 50's (nor did anyone else except at department stores). That was the basis for establishing my own credit rating. I guess I have repaid Terry with that trust many times over over the years. Those were the roots of AES 41 years ago (Harris had been business many years earlier. Terry started AES while he was in college in Milwaukee). AES is a big mail order operation. they use computers, they make screwups (although I havn;t had any myself). Any time you make that sort of phone transaction. Obviously make it a credit card transaction. Ask to whom you are speaking. Repeat the order. Verify the inventory or the expected back order time. Ask for a transaction number so some tracing can take place. Computer systems crash and much is lost. I work for one of the largest Government computer places with world reknown expertise in computers and WE have screwups with systems even with 24 hr/day system administrators.

629. Kenwood TH-28a Mod Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: Michael Dwyer <mdwyer@holly.ColoState.EDU>
Message-ID: <5pq59b$1cnc@yuma.ACNS.ColoState.EDU>
Source record: 171118

I'm kind of curious what the final word is on the TH-28a modifications.
I have seen three different mod sheets with disturbingly different
setups.

Mostly they are about the mysterious diode 9. One person claims that
this one gives you wider UHF RX. Another person claims the same
result from a completly different mix of modifications and NOT cutting
diode 9.

If anyone can give me the final word on the mods, I would really appreciate
it. Even better, if someone can give me a function for each of the
diodes, it would be even better! ie, 14 and 15 aren't used in the US.
What do they control?

Thank you for your time. E-mail appreciated. Spam returned.

630. Re: comments on "booster" amplifier for use with handheld

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: "John P. Toscano" <tosca005@tosca005.email.umn.edu>
Message-ID: <33C0A7BF.7EE6@tosca005.email.umn.edu>
Source record: 171119

Dave:

I was in almost exactly the same situation as you describe. My favorite 2M repeater was separated from my home QTH by just enough hills that I could barely get in at all on 5 watts from the first floor of my house on the rubber duck, and could get in reliably but NOT full-quieting either from the second floor of my house in the bedroom facing the repeater in question, or from my car (with a 1/2 wave external antenna).

I put up a Cushcraft AXR-270N antenna on the roof, fed it with Belden 9913 RG-8/U (plus a very short piece of RG-58 into the radio proper). Now I can hit that same problem repeater full-quieting at 1 watt, and 100% readable but with a little noise at 100 milliwats. The 9db of gain on 2M (plus 12db on 70cm) plus the height (a modest 20 feet) made all the difference in the world for me. I also rigged up a 12v @ 2amp DC adapter to insure I was able to put out all 5 watts when needed (in case the battery was low enough to work but at reduced power), although as mentioned, I didn't need anywhere near 5 watts any more for in-town work.

The MAHA docking stations look like an excellent choice if you are intent on getting higher output, especially in mobile operation (where I assume you will want to get a speaker mike of some sort, like I did). But I haven't actually gotten any first-hand experience. I took a different approach.

My changing antennas 6 times a day among the house antenna, rubber duck, and car antenna took its toll. I managed to damage the SMA connector on the radio after 6 months, although Yaesu graciously fixed it under warranty at no charge. I bought a used Yaseu FT-5100 for the car, and now don't have to change antennas on the FT-50r quite so often. And sure, 50 watts into a 9db gain antenna also gets me in full-quieting if I pop the radio out of the car and bring it inside, but there's not much point when 5 watts (or 1 watt) does the job for me. The car's 1/2 wave antenna is poor enough that I do occasionally bump the FT-5100 to 50 watts out on the road, however.

Hope that helps somewhat.

John (KB0ZEV)

631. Re: Observations on the Alinco DJ-G5T

Hi Art,

I am living in France, but I bought an Alinco DJ-G5 in Japan, out there
on a journey. Yes, the model is DJ-G5, not DJ-G5T, btw the European
model is DJ-G5E.
>
> Extended Receive: In the keylock mode, press #212. The radio will display
> the word "open." Press #212 again, and it displays the word "closed."
> In the closed mode UHF receive is 420-480 MHz; in open it's 400-512 MHz.
>
Amazing, this software code is the same down here on the European model,
though I thought one has to press the "F" key while turning the rig "on"
(reset) then dial #212 to unlock the receive coverage.
But, this does not work out on my Japanese model, the Alinco French dealer
tried to unlock it the way he does on the European model, no way...
I just tried the Keylock mode then #212, with no success :-(

> Volume/Squelch: Both are controlled by "up/down" switches. Easy to use on
> the "main" channel. But on the sub channel the F key has to be pressed as
> well.
>
Interesting, I used to toggle the main channel to adjust the Audio, this being
impossible in the Key Lock mode... Thanks for the info, remember I have a
Japanese (Kanji) owners manual... Well, the menus on the rig are in English.

> That's my take on it. I'd be interested in hearing from other DJ-G5T
> users.
>
So am I interested by any info on unlocking a Japanese DJ-G5 !

> Am considering an upgrade to the TS-570S. Have seen no comments either good
> or bad on this rig in any of news groups.

I bought my 570S at Dayton this year and have been totally pleased with
it. Kenwood threw in the PS-40 power supply for free and I added the
narrow SSB filter. I use it most of the time with a Heil headset mike
and I get consistent "nice audio" reports with it.

I use the DSP slope functions, the IF shift and the narrow SSB filter
constantly and they really make a difference between hearing a signal
and losing it in the soup.

I have the rig hooked up to my Win95 PC running DX4WIN and the
functionality between the two is really impressive. The free radio
control program from Kenwood is OK, but is more of a novelty in my view.

I don't think you will be disappointed with the 570.

= = = = =

Bob,

Hopefully, you will also get responses from some of the other key collectors
who are more knowledgeable than I am on specific variants. Your key sounds
like a typical "flameproof" / "Navy" key. I have a couple of those in
my collection, although at the moment it is boxed up so I am unable to
check that number. The flameproof come from the contacts not showing,
and the Navy (guess) from the fact that there is a base under the knob.

The other point towards the Navy is the "Contractor Code", which I learned
in the July 1993 issue of the Vail Correspondent was adopted in 1916. The
later codes (ca. WW-II, etc) have the CCC-######-C pattern, with the center
figure often in the 26000 range. CJB is "Contract" Jesse Bunnell, a good
name in the telegraph key business. 26008-A is the more specific model
and variations. //I'm wondering if this is "26003-A" with a blurred or
misread "3" vs. "8" .....

There are a number of excellent WEB sites that you can find through the
various search engines, plus they point to each other. Many have
photos.

Try http://fhonix.metronet.com/~nmcewen/ref.html

for a starter, he has links to others. Regards, Dave K7HMP

645. "HELP!!!" Noise in Kenwood TM-631A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-07 00:00:00 UTC
From: djeo1@mail.telis.org
Message-ID: <5pr2s8$4fe$1@mentor.telis.org>
Source record: 171134

I need help on my 2m/220

I run my radio mobile with it connected directly to the battery. I have owned the radio for about six years now and never had a problem. About 2 months ago I started to lose stored memory. So I changed the lithium battery. It did not cure the problem, however I ended up with another one.

When I tune the radio on 2m (in main band) to a fixed station (i.e. NOAA) I get noise in the foreground and I can hear NOAA in the background. When I do a band band change (220 now in main band and 2m in sub-band) NOAA signal comes in clear. When I switch back to 2m in main band, everthing works properly from there on as long as I keep the radio on. When I turn the radio off, then turn it back on, the same problem occurs. I checked very closely to the circuit where I soldered the battery to see for any circuit damage had occured or if I lifted any traces. Everything looks fine. In fact changing the battery was a very easy proceedure. I have checked wires and all.

Does anybody have a clue as to the problem? Any response will be appreciated. Please respond to

djeo1@mail.telis.org

Thanks

Bob,
I've had an ICOM 756 since 2/97 and had no problems with it,
whatsoever. I love the rig and the display. I felt the same as Yaesu's
comment until I played with one for awhile. Now I wonder how I operated
without it. It has an excellent receiver & very easy to operate. I've
heard of some hams who have had problems with the 756 but sent it back
& got it repaired. Just about all brands at times seem to have that
problem. Also are you aware of the 756 price drop? Now there's not
much difference for a lot more features. I also have a Kenwood TS570D
that I run mobile. If you're on a budget look at this rig also. I

compared it to the 920 & seems to me to be a better rig for the price difference. Also ICOM told me the newer 756's have all the updates already in the radio. Hope this helps. Thanks, Jack WA0VLT

Subject: FS/trade: Alinco DR-112 2m mobile
From: n9fh@qsl.net (Fred Helmstetter)

I have an Alinco DR-112 2m mobile for sale. It comes with the
TT mic and mobile mounting bracket but no box or manual. $175

Things I'm looking for if you want to trade:
- 220 Mhz mobile radio (old is ok)
- small HF beam (eg., A3, TA33 etc)
- 80/40 vertical (eg., Butternut, GAP? etc)
- medium duty rotator (eg., Ham IV)
- FT-1000MP (straight trade for the DR-112 ;-)

Thanks & 73,

Fred, N9FH

This PS has voltage and current meters on the front, overvoltage protection, built in cooling fan (quiet) and is adjustable from about 11-16VDC $50 plus shipping

I also have a couple of heavy duty adjustable (0-30VDC) supplies. These are rack mount jobs with remote sensing and V/A meters. One is 20A the other is 25A (continuous, for days...). Both are very heavy so local pickup is best. I'm in Milwaukee.

657. Schematics needed A and B supplies

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: gpewitt@execpc.com
Message-ID: <NEWTNews.868388663.21460.gpewitt@execpc.com.execpc.com>
Source record: 170898
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.
One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

Federal law says parts must be available for 10 years. After that,
the manufacturer isn't obligated to maintain parts support. If the
supplier is off-shore, he may not even be required to honor the
10 year requirement. If the part is an industry standard part,
there likely won't be any trouble finding a replacement for a
longer time. But if the part is custom, after 10 years you may
be screwed. Also realize that the amateur radio manufacturers
are at the mercy of *their* suppliers. If they can no longer
get the parts, they can't sell them to you.

What law requires a company to supply parts for 10 years? I have never seen such a law. If there was one, why would the FDA have a regulation requiring medical device mfg. to supply parts for 7 years? I wlould not bet on yor chances of finding a part for a notebook computer 10 years down the line......just a thought.

Hello All;
I am selling the Kenwood TS-440SAT with the optional PS-50 power
supply and optional Kenwood MC-60 amplified desk mic. All has less
then 5hours of use. I'm the 2nd owner. The 1st owner purchased this
unit not knowing about his qth's restrictions on no outside antenna
laws. Both of us are non-smokers..
Also all original paperwork, cartons, user's manual, covers
for the 440 & PS-50 & optional service manual are included. I have
the MFJ-1272BX tnc-microphone switchbox also if interested..
Asking $750 for TS-440/SAT with both manuals, paperwork
cover & original carton. This unit has the auto
antenna tuner, been modified for "MARS" and the
optional 7 digit LED read out. Has 100 memories
plus much more.. We detail if interested
Asking $175 for PS-50 with cover and original carton
Asking $85 for Kenwood MC-60 desk mike
Asking $970.00 + shipping. For all the above Or Best Offer.
This is a must see hf setup and I would prefer any potential buyer
to see all the above before buying.. This is One Great Setup..
Reason for selling is strictly financial. Please re:me either through
Packet: N2RIF@WM2F.#SNJ.NJ.USA.NA
Or Better
Email: n2rif@amsat.org
My phone# is: (609) 386-9382 but sorry it is busy most of the time.
You can try though anytime from 10am to 10pm ET..
Thank you for reading my sale's bulletin.

665. Re: Icom IC-756 vs. Yaesu FT-920

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: Dudley Hurry <jdhurry@ingr.com>
Message-ID: <01bc8bd3$d17976d0$02646464@jdhurry1>
Source record: 170906

Bob,

I just recently purchased a FT-920 and have been very pleased with the performance of the transceiver.. So far it has done everything that Yaesu says, while not having a IC756 to directly compare to side by side, the 920 does seem to have a very good receiver and lots of features to keep one fully employed configuring and operating the radio. My previous radio was a 25 year old pair of Drakes (R4B, T4XB) while they had been great radios, the technology had far outrun their usefullness in today's crowded bands. I particularly like the tunable DSP and the tunable notch filter. I also have the narrow CW (500hz) filter, and awaiting the FM module (backordered).

My biggest reason for the purchase of the 920 over the 756 was that I thought the display of the 756 looked too confusing and not as straight forward (maybe due to past experience) as the 920.. While I'm sure that one can get very proficient operating the 756, I tend to not operate for months at a time, did feel like going thru retraining everytime I sat down for a short QSO.

So far I'm very happy, which is good, cause I may have this radio for atleast 20 years.

Good luck,
73's
Dudley Hurry

666. *** For Sale: MFJ-989C 3KW Antenna Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: Jack Burris <jeburris@facstaff.wisc.edu>
Message-ID: <33C29476.46E64C5F@facstaff.wisc.edu>
Source record: 170907
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.marketplace

Subject says it all. I'm selling my MFJ-989C 3 Kilowatt (PEP) antenna Tuner. This is probably one of the best pieces of equipment I've ever owned. I'm moving and won't be able to take it with me (plus I need the

money to pay for the move). It's it great condition.

Make an offer. Amateur Electronic Supply (http://www.aesham.com/mfj.shtml) lists this item for $299.95, what's YOUR price?

Please respond via email only.

peace and 73,
Jack, NZ0C

HI Jack, AS I sit here listening to my Icom 756, which KILLS the 990
Yaesu and DSP 599 built in the speaker, Im thinkin, how could the 920
Stand up. Its not 990!! So, theres my 2 cents. I even had a JRC JST
245 that this ICOM beats, and Kenwood 940 , which with NIR 12 was as
close as anything including 950SD. I love it and consider it very much
a bargain. Spectrum display is very nice to casually watch as you
moniter the band or set the squelch and just glance over to see it 6 is
op[en while you do your email. I gave 2k for mine about 3months ago,
at the first price drop, now I hear some 1899s etc. I say get one!!
Thats all. BTW Iam 55 years old, been a ham only 2 and half years.
Have good toy budget but not wealthy at all. Both wife and I work,. A
reply would be interesting. Let me know what you do, CUL 73 Murray

You apparently haven't visited Dallas, TX, where this gentleman
lives. I'm recently from the Dallas area, which is most definitely
not a "grid-type layout" area.

The Dallas area (a 75-mile by 150-mile metropolitan blight) is
composed of nearly a hundred smaller incorporated and unincorporated
bedroom communities, industrial parks, and small farm towns engulfed
by the urban sprawl of Dallas, Fort Worth, and soon, Denton, Sherman,
Waxahachie, and Greenville. Every time you cross a city line, the
numbering restarts. On more than one road in the area (for
example, Belt Line Rd.) the road makes a wide loop, reverses
direction, and changes numbering so that west is east, southbound
is northbound, you've been in four different cities and passed the
exact same street number three times, and now you're BACK in Dallas
but turned around with the same street number AGAIN -- the only clue
is the Zip code.

Enough geography trivia. My point -- even though as a Dallas local
I knew the address was bad, the simple existence of a six-digit
street address should have been a flag for bad data, ESPECIALLY
with two pairs of repeated digits. I would have confirmed the
address before trying to send anything besides a QSL card there.

As at least one poster noted, there are online resources available.
As a lesson to all of us -- it's worthwhile to locate and utilize
these resources, whether we're in business, shipping expensive
equipment, or merely mailing a club newsletter.

That's a pretty thorough job you did! It's a common problem - I had it too - and is due to poor grounding on the AF board whoich also carries the main voltage regulators for the whole rig. The Kenwood recommended solution is to insert extra-vicious star washers under each of the ground pillars.

Some people suggest a separate ground lug to a new hole in the chassis, but the simple solution worked for me.

You can certainly find out more about this and other modifications by searching both the Web and Usenet for "TS-830".

BUILD SOMETHING!!!

Silver plated- stranded 22 and 24 AWG teflon insulated hookup wire assortments.

five rolls 50 feet each (250' total) in five different colors.

this wire is used in military contracts due to its high quality, durability and overall high reliability. it is rated at 200dC /600V

It solders *very* nicely and it will not melt under ordinary soldering conditions. (unlike cheaper grades of wire)

the 250' assortment pack is $15 plus $3 for priority 2 day mail in USA

If interested contact me by Email to reserve a pack.

I have some ham equipment that I don't use anymore, and I need to get some quick cash. All of the listed equipment is in very good condition.

1 Heathkit hw 101 10 - 80 meter tranceiver. 100 watts. With matching power supply. This is an excellent radio that has always performed well. It is in excellent cosmetic and operating shape. Best Offer. Great beginners radio (it was my first).

1 Palomar 10,15,20,40 meter .5 kilowatt amplifier. Works great. With matching power supply. Best offer.

1 wartime antenna tuner(?). New condition. Don't know the vintage of this thing... I have tried to find out several times. I don't have the model numbers in front of me, but if anyone is interested let me know, and I will send them to you. Also I have some meters (swr, power etc) that I will throw in if you buy something.

I really need to sell these things as soon as possible. I will take any *reasonable offer.

thanks

Need at least two powerful, long range CB "Handy Talkie" or "Walkie Talkie" type units (preferably with "holsters" and 12V cagarette lighter adapters) and four or more roof-mount "Mag(netic) Mount" antennae -- preferably to borrow for about two weeks.

Rough & Ready (CA) Varsity Boy Scout Troop needs to borrow or buy these units for trip to Washington DC area during National Scout Jamboree -- leaving 21 July, returning 30 July. Scouts are mature for their age (mostly 14-16). Most of them just completed their Radio Merit Badge, and many are already Eagle Scouts. Adult-Scout ratio is about 1 adult per 1.5 Scouts so they will be well-supervised.

CB units will be used to extend range and keep cars in caravan in touch during day trips and for tours of large Civil War battlefields, etc. Use can be restricted to adults if you prefer.

Please contact me ASAP directly if you can help:

I would also suggest a number of other things to look at.....
1. check your earthing is OK, if you are a way up from a reasonable
ground then run 1/4 wave radials for each band, though I use ones for
80, 20 and 10 they seem to keep RF quiet on all bands. Remember to tape
off the ends from pets or anyone who may accidentally touch them and get
a nasty RF shock.
2. Be conservative in the amount of speech compression you use on SSB or
excessive harmonics can be generated, on a high power amp, keep the ALC
well back.
It's not always the fault of the amateur, the equipment makers
sometimes design nice looking cases with front-ends that have very
little immunity to RF. It's been a problem for years with domestic
equipment, the Regs. here in Europe were supposed to be tightened some
years ago, making the makers responsible if it could be shown that your
RF output is "clean".
Regards

From: Philip Scott <pwscott@erols.com>
Message-ID: <33C2F721.30590BE0@erols.com>
Source record: 170933

What's the deal with the new Yaesu VX-1R and scanning....I read somewhere here that it 'only scans in one band'...can someone elaborate on that...I checked one out at HRO Saturday and loved it, but I'll use it more for listening than for TX so scanning is key. I gather it has 9 groups of chanels, 290 altogether...is that 10 scan edges for searching or what?

Thanks for any info.

697. -FT-50 Case info???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: Josh Pavlovich <jpav@mtnweb.com>
Message-ID: <33C2FC38.2044@mtnweb.com>
Source record: 170938

Does anyone have, or know where I could find a picture of the cases for the FT-50. In particular I am interested in the new leather case designed for the commercial version, or in the cordura case. The only place I can find any reference to these is through mail order, and no one seems to have a picture.

If no picture, can someone who owns one of these describe how it looks. Do either cover the entire radio? Do they have a clear window to view through. I really would appreciate any help anyone is able to give.

Thanks much,
Josh Pavlovich

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio
73s Frank WQ1O

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think this radio is especially good for crossband because you can combine DTMF code squelch functionality with the crossband function to prevent accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive
sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater
signal from a repeater that is about 80 miles away with the rubber
ducky antenna. The signal is intermittant on the ducky but when
attached to an outside j-pole, the signal is great. The w32a cannot
even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to
the j-pole at home. I was in the truck with my Kenwood v7a. My
output at 10 watts could be heard by him for about 3 miles. At 4
miles, he could not hear me at all but I could hear him (transmitting
at 5 watts) clearly. When I went to 50 watts, he could hear me but it
was scratchy.

Icom has tested the radio and says it is working according to spec. I
think that a receiver should be able to pick up a 50 watt signal with
an outside elevated antenna perfectly at a distance much greater than
4 miles.

Has anyone else had this problem? The UHF side does not have this
poor sensitivity.

From: Phil Wheeler <w7ox@ix20.ix.netcom.com>
Subject: mobile HF antenna advice

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and
a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see
Sept 96 QST for review). One advantage is that it has a tilt-over hinge
at the basew for garaging. Apparently it can be used with a trunk-lip
mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've
used an Outbacker on 20 m and prefer the Hamsticks. And not sure it
will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the
AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

From: wormser@osiris.cso.uiuc.edu
Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think this radio is especially good for crossband because you can combine DTMF code squelch functionality with the crossband function to prevent accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive
sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater
signal from a repeater that is about 80 miles away with the rubber
ducky antenna. The signal is intermittant on the ducky but when
attached to an outside j-pole, the signal is great. The w32a cannot
even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to
the j-pole at home. I was in the truck with my Kenwood v7a. My
output at 10 watts could be heard by him for about 3 miles. At 4
miles, he could not hear me at all but I could hear him (transmitting
at 5 watts) clearly. When I went to 50 watts, he could hear me but it
was scratchy.

Icom has tested the radio and says it is working according to spec. I
think that a receiver should be able to pick up a 50 watt signal with
an outside elevated antenna perfectly at a distance much greater than
4 miles.

Has anyone else had this problem? The UHF side does not have this
poor sensitivity.

From: Phil Wheeler <w7ox@ix20.ix.netcom.com>
Subject: mobile HF antenna advice

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and
a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see
Sept 96 QST for review). One advantage is that it has a tilt-over hinge
at the basew for garaging. Apparently it can be used with a trunk-lip
mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've
used an Outbacker on 20 m and prefer the Hamsticks. And not sure it
will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the
AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

From: wormser@osiris.cso.uiuc.edu
Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio

From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think this radio is especially good for crossband because you can combine DTMF code squelch functionality with the crossband function to prevent accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive
sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater
signal from a repeater that is about 80 miles away with the rubber
ducky antenna. The signal is intermittant on the ducky but when
attached to an outside j-pole, the signal is great. The w32a cannot
even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to
the j-pole at home. I was in the truck with my Kenwood v7a. My
output at 10 watts could be heard by him for about 3 miles. At 4
miles, he could not hear me at all but I could hear him (transmitting
at 5 watts) clearly. When I went to 50 watts, he could hear me but it
was scratchy.

Icom has tested the radio and says it is working according to spec. I
think that a receiver should be able to pick up a 50 watt signal with
an outside elevated antenna perfectly at a distance much greater than
4 miles.

Has anyone else had this problem? The UHF side does not have this
poor sensitivity.

From: Phil Wheeler <w7ox@ix20.ix.netcom.com>
Subject: mobile HF antenna advice

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and
a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see
Sept 96 QST for review). One advantage is that it has a tilt-over hinge
at the basew for garaging. Apparently it can be used with a trunk-lip
mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've
used an Outbacker on 20 m and prefer the Hamsticks. And not sure it
will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the
AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

From: wormser@osiris.cso.uiuc.edu
Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Go for the 40 Meter Band. It may be a little noisier and
there are some European BC stations on at night, but
15 meters is really not open all that much.

I think you'll get a lot more nightly experience with
contacts on 40 Meters.

Go get 'em!

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is
such a large percentage of such "for sale" posts - maybe the group has
changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending
copies of a form letter to each errant WTB/T or FS poster about the same
idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think
this radio is especially good for crossband because you can combine
DTMF code squelch functionality with the crossband function to prevent
accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: crossband

I have a chance to get a ft5100 at a really good price. I'm looking for a
mobile dualband with crossband repeater function. In the yaesu catalog it
states the ft 5100 has built in crossband repeat functions. But nobody I
know has heard it does. Can anyone tell me if it does or not. Or do I have
to do a mod to get it to work.

Any and all help will be appreciated

Subject: Diamond F-22A?

I was wondering if anyone has had any experience with the Diamond F-22A 2-Meter Monoband vertical? My groundplane finally broke, so I am considering "upgrading" to this antenna. Is it constructed of fiberglass? Your comments would be greatly appreciated.

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed for short tune-up time. Automatic band switching (compatible with the IC-2KL solid-state linear amplifier). Matching circuit can be preset for each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects the suitable antenna for each band automatically. When the tuner switch is turned off, this tuner can be used as an automatic antenna selector. All bands are presently connected to single connector since I was using an antenna switch, but is easily modified to use all four connectors. Also has room for a fifth connector if necessary. Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater signal from a repeater that is about 80 miles away with the rubber ducky antenna. The signal is intermittant on the ducky but when attached to an outside j-pole, the signal is great. The w32a cannot even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to the j-pole at home. I was in the truck with my Kenwood v7a. My output at 10 watts could be heard by him for about 3 miles. At 4 miles, he could not hear me at all but I could hear him (transmitting at 5 watts) clearly. When I went to 50 watts, he could hear me but it was scratchy.

Icom has tested the radio and says it is working according to spec. I think that a receiver should be able to pick up a 50 watt signal with an outside elevated antenna perfectly at a distance much greater than 4 miles.

Has anyone else had this problem? The UHF side does not have this poor sensitivity.

* Use it as a paper weight
* Throw it at the neighbor's cat when it howls in the middle of the
night.
* Play catch with it
* Use it as a counter weight when throwing a line in a tree for an
antenna
* Apply 110VAC to it and watch it explode
* Put it in a package wrapped as a gift and leave it on a bus bench
* Put it under the front edge of your rig to make the dial more easily
turned
* Charge 100,000 MFd to 20 volts and discharge it through it to
rejuvenate the cells (wear safety glasses)
* Disassemble it to see how it's put together
* Offer it for postage expenses to somebody who wants to try to put new
cells in it
* Sell it to somebody on rec.radio.swap, saying that it's unused and
works fine and then read the flames start and the ranting and raving
* and best yet...throw it away

(Sorry, but I just couldn't resist...ask a leading question and you have
to expect a stupid answer!!!)

Drew, We need to talk! I,ve got 3 TS-930s! I love 'em! I just sold my
Drake Line and bought them. Two work great, and the 3rd one needs the
RF Driver stage fixed. (I bought it that way for $500.) I replaced the
parts and fired it up. One of the transistors ($35 apiece) burst open.
This was also the way I found the circuit when I first opened it up
after bringing it home-one of the transistors was busted open.

Evidently I overlooked something or the new transistor was defective. I
talked to a ham in Rocky Mount who had a 930 that developed a problem on
the Digital Display Board and he was told that there is no replacement
boards available so he dumped his.

Point is, I want all the information I can get about parts availability
and I will share what info I have with you.

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio
73s Frank WQ1O

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think this radio is especially good for crossband because you can combine DTMF code squelch functionality with the crossband function to prevent accidental triggering by other stations.

best of luck, Don (KE4KYO)

Right now, I'd go for 40 metres. Contacts up to 3000km should be quite
possible with QRP. Longer distances are very difficult. Thus 40m is
better for domestic operation.

Two years time 15 m should be good. International contacts will be much
easier on 15m than 40m.

For this period in the sunspot cycle, 40 meters for sure! I've worked Europe in the evening several times running 5 watts on 40 meters using a dipole 55 feet high. DX is possible, you just have to be patient.

Subject: Icom w32a problem - very poor sensitivity

Hi, John,

Everything you say leads me to the same conclusion - your W32 has a sensitivity problem. My W32 hears everything just as well as all my other receivers.

But to know for sure if you have a problem, you need to test it with a calibrated signal generator (part of a device often called a "service monitor"). In this area, most hamfests have someone set up with a service monitor testing HTs. You could also ask around on local repeaters, and as a last resort, ask at a local 2-way radio shop.

The radio should hear an audible test signal set below .2 microvolts. If the hard evidence proves a problem, you ought to be able to show Icom you need a repair.

From: "John D. Nell" <jnell@ezl.com>
Subject: Yaesu VX-1R Question/Comment

OK, I've had my VX-1R now for about a week and can not figure out how to enter independent TX/RX frequencies in a single memory across the VHF and UHF bands. Has anyone done that yet?

I can enter an "odd split" in the SAME band, vhf OR uhf, but not into a memory channel which lets me "transmit on UHF" and "receive on VHF". I use my Standard C508A this way all the time to "mobile extend". I was hoping to "shrink" my everyday HT even further with this little gem.

I guess if I don't hear about how it's done soon, this little baby will be for sale and the Standard C510 will take it's place in my HT corral!

BTW, I agree with whomever said Yaesu screwed up the "scanning" function of this HT. Only scan in a single band, come on....get with the plan, Stan!

Oh, one last thing... where's the VX-1R FAQ section? I don't have all day to surf the net looking for facts and fiction...but this Newsgroup is just fine :)

Hey, Dave,

Congratulations, and welcome to the CW bands. We can use all the good operators we can find, and gaining experience at 10 WPM is an excellent way to improve your skills.

Okay, I'll get off my soapbox and give you my opinion on bands. If you will be operating mainly in the evening and at night, 40 is going to suit you better. It will be a few years before 15 opens reliably (every day) and for a significant portion of the day. The way it is now, at the bottom of the sunspot cycle, you may hear 15 open for an hour a day a few times a week. Not enough to keep my interest! And, even during the day, 40 meters will provide good local contacts with strong signals, low noise, and little fading pretty much all day. You may even work some DX.

Now for some bad news: a 40 m antenna is three times as long as a 15 m antenna. For example, a half-wave dipole is approximately 67 feet on 40 vs. about 23 feet on 15. However, a 40 m dipole will also work on 15 without modification, in case you decide to add that band to your repertoire later.

Good luck, and I'll see you on the bands!

R,

Al W6LX

Subject: !! Alcatraz Mini-DXpedition !!

The Sonoma County Radio Amateurs will be packing up their radio
equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

There a a number of reasons why not to use the adaptor.BTW,mine only cost
$5.95,still no bargain,kind of like the replacement antennas...
The reasons...
1.Looks Bad!
2.The SMA antennas have a "shoulder" that prevents the connector from
being broken off the radio,and helps prevent stress on the connector.The
BNC ducks and whips are pretty heavily built and wouldn't inspire
confidence due to excessive bulk.If the radio is dropped,the antenna
connector will probably break.....

My Standard C510A will be using some kind of replacement,but the damn
things cost way too much.....Barry N8PVX

Subject: "HELP!!!" Noise in Kenwood TM-631A

I need help on my 2m/220

I run my radio mobile with it connected directly to the battery. I
have owned the radio for about six years now and never had a problem. About
2 months ago I started to lose stored memory. So I changed the lithium
battery. It did not cure the problem, however I ended up with another one.

When I tune the radio on 2m (in main band) to a fixed station (i.e.
NOAA) I get noise in the foreground and I can hear NOAA in the background.
When I do a band band change (220 now in main band and 2m in sub-band) NOAA
signal comes in clear. When I switch back to 2m in main band, everthing works
properly from there on as long as I keep the radio on. When I turn the radio
off, then turn it back on, the same problem occurs. I checked very closely to
the circuit where I soldered the battery to see for any circuit damage had
occured or if I lifted any traces. Everything looks fine. In fact changing the
battery was a very easy proceedure. I have checked wires and all.

Does anybody have a clue as to the problem? Any response will be
appreciated. Please respond to

djeo1@mail.telis.org

Thanks

Subject: Crossband repeat

I have a chance to pick up an Alinco dr 590 or a ft 5100 both for a very cheap price. My question is- Do either of these radios have crossband repeater functions? I like the features of the ft 5100 better but I'm mainly looking for the crossband function at this time. Any and all help will be very thankful....

Subject: Dwindling Kenwood parts availability?

Hello,
About one year ago I had my TS-930 serviced through the Virginia Beach authorized service center. The technician indicated that because of the age of the rig (13 years at the time), that he could not guarantee that parts would be available in the future, and that it might be desirable to look at newer equipment. A friend in the Richmond area who trades heavily in amateur equipment was also told this. So, is this concern just limited to the Virginia Beach Kenwood service center, or are there other authorized service centers on the west coast, or other places? How long do ICOM, YAESU and TENTEC feel disposed to support their products?
Any responses will be much appreciated.

From: "Paul Jordan" <jordan@*santanet.com>
Subject: For Sale??? You Might Be In The Wrong Newsgroup...

I really don't see a problem with people selling and buying stuff in this newsgroup. Maybe it could be a policy here that if they want to sell something, they put FS in the beginning of the subject and if they want to buy, they put WTB in the front of the subject. That way, if you're not interested in buying or selling, you can just go on to the next subject line. I don't think you'll ever get people to stop buying and selling in here though. To tell you the truth, that's exactly why I come to this newsgroup.
I see that a couple of replies get right into the main problem of ham radio and that's all the crap that's is being said on the higher licensed bands. That sure makes me want to take the time to learn code so I can run right out, spend $1000's on a new rig and antenna. Boy, I can't wait. My clean 2 meter conversations just aren't cutting it anymore. We just don't seem to have problems like that here in Alaska. I guess we just run a clean net up here.
Well, those are just my opinions and I'm sure you'll hear a lot more.

Subject: Getting started in CW: 15 or 40 meters?

Just getting started in CW, I'm looking at a MFJ CW Transceiver.
Which is the best ban for a Tech+ sending accurately at 10wpm.. 40 or
15 meters?

Also, any better CW rig (moderately priced) than the above.

Thanks

Dick,
it says to
(1) Turn off the power supply
(2) Remove top cover of control unit
(3) Remove the 4P connector with loop lead
(4) turn on the power supply
(5) Check that the content of every memory is 5.000.

After checking this state, insert the 4P connector wi loop lead, with
the power applied.

Gareth Crispell wrote:
>
> Does any one know anything about these radios? What is the real dope?
>
> N1MSV

Hi Gareth! I have a JST-245 that I bought almost two years ago. It
has been a dependable radio so far with a few bugs that have been fixed.

I have a very early version that had the first release firmware that had
a goofy situation wherein if a narrow bandwidth receive filter (1.8 KHz)
was selected, the radio transmitted through it too! That was fixed with
a new prom.

The original calibration of the noise blanker (circa '95) was pretty disappointing. I use the radio as an IF for VHF/UHF transverters and therefore suffer from the dreaded "line noise" on occasion. The original noise-blanker was a poor performer in reducing the VHF line noise. However, after I installed the new component values from the "noise-blanker mod" in my radio, the blanker has turned out to be the BEST noise blanker I have ever used -- period. I really treasure how well it cuts down any lingering line noise on 6 or 2 meters (even 432,

Federal law says parts must be available for 10 years. After that,
the manufacturer isn't obligated to maintain parts support. If the
supplier is off-shore, he may not even be required to honor the
10 year requirement. If the part is an industry standard part,
there likely won't be any trouble finding a replacement for a
longer time. But if the part is custom, after 10 years you may
be screwed. Also realize that the amateur radio manufacturers
are at the mercy of *their* suppliers. If they can no longer
get the parts, they can't sell them to you.

What law requires a company to supply parts for 10 years? I have never seen such a law. If there was one, why would the FDA have a regulation requiring medical device mfg. to supply parts for 7 years? I wlould not bet on yor chances of finding a part for a notebook computer 10 years down the line......just a thought.

From: cstampf@health.co.dutchess.ny.US (Charles Stampf)
Subject: DX77 vs R7000

I'm considering using a vertical multi-band antenna at my vacation home. It is a condo and there are antenna restrictions that prohibit a permanent installation. So, I've concocted a scheme whereby I can move an antenna into place on the elevated back deck during the dark hours and remove it after my operating session, without anyone being offended.

My dilemma is which vertical to choose. I've limited the choice to Hygain's DX77 or the R7000 from Cushcraft. Does anyone have any comments, suggestions or experiences regarding these antennae?

From: n9fh@qsl.net (Fred Helmstetter)

I have an Alinco DR-112 2m mobile for sale. It comes with the
TT mic and mobile mounting bracket but no box or manual. $175

Things I'm looking for if you want to trade:
- 220 Mhz mobile radio (old is ok)
- small HF beam (eg., A3, TA33 etc)
- 80/40 vertical (eg., Butternut, GAP? etc)
- medium duty rotator (eg., Ham IV)
- FT-1000MP (straight trade for the DR-112 ;-)

Thanks & 73,

Fred, N9FH

There is a case that was originally made for the commercial version of the FT-50R, the VERTEX series. The case has a commercial belt clip, stretchable elastic on both sides, and a clear front will holes cut out for the speaker and microphone. The thing I fear most is damage of the clear display, and the plastic covers that nicely. Since the sides are elastic, the case accomodates the low power battery as well as the 9.6 volt battery.

I also have a custom case made by a local couple in town who are police officers. Problem is, most of the Motorola HTs have all controls on the top, and you can change the controls while they are in the case. Not so with the FT-50R. The case I mentioned above is the one I use. It easily slips off the belt for programming, and secure on the belt when you place it there. I am unsure of the model number, but I know AES has them for about $20.

Hope this helps! I know there is a heavy leather case out there also, but I like to be semi-inconspicuous!

Hello KR4WM:

I'll bet you have nice neighbors! I know several hams that transmit at high power (yes that is HIGH and not reletively high). Most have needed to buy high pass filters for various equipment for themselves and their neighbors. You can build these, but it's much easier to buy them.

I am supposing that you are running HF. If you are running VHF/UHF at these power levels, then other fixes are required.

Good luck.

Keith:

I would highly recommend that if you feel the way you do about this customer, that you send back his check, and cancel his order. It's that simple. When you see people ripping you apart, IF you are on the up and up, then blow them off by sending their money back, and cancel them. Then again, if your customer is on the up and up, then your business will suffer to the point of destruction, via the web.

BTW: I personally know of several destructively oriented people that have received good products from vendors that made major negative noise anyway, just because they could. It's sad, but you'll see 10 times more gripes than good remarks from customers, if you do a good job.

Good luck on your business decisions.

The FT5100 does have crossband repeat with no mod required. I think
this radio is especially good for crossband because you can combine
DTMF code squelch functionality with the crossband function to prevent
accidental triggering by other stations.

best of luck, Don (KE4KYO)

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so
when it receives a signal on one band,it re-transmits it on the other,and
vice-versa. No mod is required to do this. It is explained in fair detail
in the Yeasu manual. My friend has that rig,and it works great. It also
has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs.
simult. I have the 8100R and it also has these features,plus ext. rec.
I think you will be very happy with it. Hope you get a good deal on the
radio

734. Icom w32a problem - very poor sensitivity

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: jrhodes@iti2.net
Message-ID: <33c2af52.5797143@news.zippo.com>
Source record: 171006

I have an Icom w32a that has a problem with terrible receive sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater signal from a repeater that is about 80 miles away with the rubber ducky antenna. The signal is intermittant on the ducky but when attached to an outside j-pole, the signal is great. The w32a cannot even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to the j-pole at home. I was in the truck with my Kenwood v7a. My output at 10 watts could be heard by him for about 3 miles. At 4 miles, he could not hear me at all but I could hear him (transmitting at 5 watts) clearly. When I went to 50 watts, he could hear me but it was scratchy.

Icom has tested the radio and says it is working according to spec. I think that a receiver should be able to pick up a 50 watt signal with an outside elevated antenna perfectly at a distance much greater than 4 miles.

Has anyone else had this problem? The UHF side does not have this poor sensitivity.

ICOM IC-2KL solid state amplifier in excellent condition.
Amp comes complete with 10 meter mod, manual, cables, and
custom shipping box. $1175.00 plus shipping.
Used very little.

HRO and AES were still selling the IC-2KL until recently
for $2459.00. One of the best solid-state amps ever made.

The IC-2KL covers 160-10M, 50-80W for 600W PEP SSB/500W CW Output.
Separate RF and power supply decks. Automatic band switching
operation when using with an ICOM transceiver, but will work with
any transceiver. 110v-20A or 220V-10A. Presently setup for 220V,
but can be changed easily.

Both units are 4 1/2" h x 9 1/2" w x 15 1/2" d. 45 lbs.

Call me daily up to 10pm PDST at 408-257-5383 or send email
to sandy@sandy.com. Thank for reading.

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

I'm looking for a "reasonably" priced two meter/440 radio with at least 40 watts on the two meters side capable of crossbanding. The radio need not have a host of special features other than tone. Email me with your price and description and perhaps we can come to an agreement. I'm not in a big hurry but would like to obtain such a unit within two months.

Right now, I'd go for 40 metres. Contacts up to 3000km should be quite possible with QRP. Longer distances are very difficult. Thus 40m is better for domestic operation.

Two years time 15 m should be good. International contacts will be much easier on 15m than 40m.

749. Re: Icom w32a problem - very poor sensitivity

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <33c218b3.1547377@NEWS1.MMS.NET>
Source record: 171021

Hi, John,

Everything you say leads me to the same conclusion - your W32 has a sensitivity problem. My W32 hears everything just as well as all my other receivers.

But to know for sure if you have a problem, you need to test it with a calibrated signal generator (part of a device often called a "service monitor"). In this area, most hamfests have someone set up with a service monitor testing HTs. You could also ask around on local repeaters, and as a last resort, ask at a local 2-way radio shop.

The radio should hear an audible test signal set below .2 microvolts. If the hard evidence proves a problem, you ought to be able to show Icom you need a repair.

73,
Gary KN4AQ

HELP!! NEC pagers (Cyrillic) WANTED
2Moderator: Sorry if out of conference.

Hello All,

Your help is heavily requested!!!

Our company named "Multi-Communication". We were established at January 1994. Our business - trade. We have a number of branches in different countries. We employ Russian-speaking staff there. We use office alpha-numeric paging system to organise its work. We would like to buy NEC paging receivers (pagers) from you.
We would like to receive the price on NEC-21A, NEC-26B, NEC-20B and, possibly, other 2-language Cyrillic-Latin alpha-numeric pagers. Please, send us by fax delivery terms and conditions on them, too.
We consider to place an order on
1000 NEC-21A (100-200 monthly - depending on prices),
1000 NEC-20B (100-200 monthly - depending on prices),
1000 NEC-26B (100-200 monthly - depending on prices).
System:
Frequencies: 159,825+MHz and 161,950+MHz,
Rate: 1200 baud,
Format: POCSAG.
Please, call us:
007 095 921-4709,
007 095 971-5514,
007 095 971-5328.
Our fax:
007 095 921-7780.

Our email:
m-comm@dol.ru

If you have no possibility to deliver such volumes directly, please give us the list of distributors with contact numbers.

Best regards,

Dmitri Ivanov
Multi-Communication

> http://www.dejanews.com/ Search, Read, Post to UsenetHi Alan,

You've done pretty well for a newbie!
Although I have not seen this problem in a Kenwood, I have seen it in
Icom and Yaesu- both with the same cause- small single turn variable
caps. In case of the Yaesu it was a frequency netting cap on a
heterodyne oscillator- drove me nuts. It occurred randomly and never
when I had the rig open. A hint from another ham sent me looking in that
direction. Replaced 2 or 3 and that was the end of it. Hope this helps.

Dale

762. FT-5100 deviation adjustment?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-08 00:00:00 UTC
From: mmss@mmss.sdi.agate.net
Message-ID: <33c26d36.19928437@news.agate.net>
Source record: 171034

Can anyone assist me in locating the correct adjustment to set the deviation on a FT-5100? My friend has one that is set way too low and I'd like to adjust it for him. I'm just not sure where to find it and don't want to turn the wrong trimmer!

Allen-

The U.S. units can be so modified- it involves removing 3 surface mount parts. The Japanese unit evidently has a different CPU and can't be modified. I'd check with local dealers or call Icom direct to find out.

To reply, please remove "nospam" from front of e-mail address.

I am looking for a working used base or dual band mobile w detachable face.
Low on cash, but have some awesome stuff to balance the deal.

765. FT-50 owners, how to stop accidental power on?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-09 00:00:00 UTC
From: RonL-nospam-@macconnect.com
Message-ID: <33C4739C.7D4A@macconnect.com>
Source record: 170789

I just bought an FT-50 and the slightest touch (not 1/2 second like the manual says!) turns it on. If it falls over, it turns on. I'm afraid it's gonna turn on in a pocket, in the glove compartment, etc. Any suggestions?

Thanks,
RonL

* Continuation 1 of a split message *

if the noise is bad enough) during contests.

I should mention that I also have an FT-1000MP (which replaced an
FT-1000D) that I use primarily for chasing DX, where the dual, stereo
receivers are really helpful. The '1000MP has a great sounding receiver
and is a terrific HF rig. That said, I was listening to EA3OT and some
other "broadcast quality" signals on 20 the other night, with the
'1000MP on one antenna and the JST-245 on another antenna. I found that
I prefered the sound of the '245 to the '1000MP, as reproduced through
their respective matching speakers. The '245 is really a great sounding
radio and I like listening to it for long periods.

If you have any specific questions that I didn't answer, let me know and
I'll be happy to answer them.

Subject: Kenwood TS-570S

> Am considering an upgrade to the TS-570S. Have seen no comments either good
> or bad on this rig in any of news groups.

I bought my 570S at Dayton this year and have been totally pleased with
it. Kenwood threw in the PS-40 power supply for free and I added the
narrow SSB filter. I use it most of the time with a Heil headset mike
and I get consistent "nice audio" reports with it.

I use the DSP slope functions, the IF shift and the narrow SSB filter
constantly and they really make a difference between hearing a signal
and losing it in the soup.

I have the rig hooked up to my Win95 PC running DX4WIN and the
functionality between the two is really impressive. The free radio
control program from Kenwood is OK, but is more of a novelty in my view.

I don't think you will be disappointed with the 570.

From: RonL-nospam-@macconnect.com
Subject: Maha/Yaesu charger compatability answers!

I called Maha this AM. They said that their NiMH Yaesu-compatible batteries can
be charged by the Yaesu NC-50 (dual with interchangable cups) but should be
left
in for 2 hours instead of 1 hr to get the last 10%. They did extensive testing
to assure compatability. Via HRO however, I am told that Yaesu specifically
states that their charger will *not* charge NiMH batteries.

Their own charger will charge Yeasu's or their batts, but one at a time and
only
the specific batteries you buy the unit for (no interchangable cups). Maha also
says that if you have the time, a trickle charger will make any NiMH or Nicad
last a lot longer.

From: Jeff Kilgore <kilgore@tivoli.com>
Subject: mobile HF antenna advice

I just bought an Icom IC-706 MkII and am still looking into antenna possibilities for an HF mobile setup. The radio will be installed in a Camaro, so there's not a lot of room, and I don't want to drill holes or stick a large tri-mag mount on the car, since I just bought it a couple of weeks ago. I have considered several mounting possibilities, but am leaning toward some type of frame mount. I also would prefer not to have a 6' or 8' antenna, since I would have to remove it to park in my garage at home and in the parking garage at work. I don't mind trading some efficiency for something more convenient that I can leave on all the time.

I am currently leaning toward the Outbacker Stealth Plus, which is 4' tall and covers 80-2 meters, including the WARC bands. Does anyone have any comments, good or bad, about this antenna, or perhaps other antenna recommendations? Again, I am not looking for the best possible antenna, but something that is functional, but relatively unobtrusive and convenient. I will probably primarily be operating on 40 and 20 meters, and I'm not going to be doing any DXing or contesting while mobile. I also plan on doing some mobile SWLing.

Thanks for any comments/advice anyone can offer.

73,
Jeff Kilgore, KC1MK

Make sure you have at least 7' of vertical space before you get a comet gp6. The ar270b will fit in about 4'. The gp6 has a lot more gain than the 270b though.

I found a bug with using PL tones, Has any one else hit this?
How do I communicate this with Yaesu?

If I set two different memory locations to the same frequency with different PL tones and then try to scan them both. Very often (> 50%) of the time either correct PL will not open the squelch. It seems if it hits the correct channel first it gets through, but if it it hits the other first the squelch will never open & it will just keep scanning both channels.

Subject: Observations on the Alinco DJ-G5T

Hi Art,

I am living in France, but I bought an Alinco DJ-G5 in Japan, out there
on a journey. Yes, the model is DJ-G5, not DJ-G5T, btw the European
model is DJ-G5E.
>
> Extended Receive: In the keylock mode, press #212. The radio will display
> the word "open." Press #212 again, and it displays the word "closed."
> In the closed mode UHF receive is 420-480 MHz; in open it's 400-512 MHz.
>
Amazing, this software code is the same down here on the European model,
though I thought one has to press the "F" key while turning the rig "on"
(reset) then dial #212 to unlock the receive coverage.
But, this does not work out on my Japanese model, the Alinco French dealer
tried to unlock it the way he does on the European model, no way...
I just tried the Keylock mode then #212, with no success :-(

> Volume/Squelch: Both are controlled by "up/down" switches. Easy to use on
> the "main" channel. But on the sub channel the F key has to be pressed as
> well.
>
Interesting, I used to toggle the main channel to adjust the Audio, this being
impossible in the Key Lock mode... Thanks for the info, remember I have a
Japanese (Kanji) owners manual... Well, the menus on the rig are in English.

> That's my take on it. I'd be interested in hearing from other DJ-G5T
> users.
>
So am I interested by any info on unlocking a Japanese DJ-G5 !

From: Saar Maoz
Subject: FT-8000 Audio question...

All,

As promised, I am posting the outcome of my FT-8000 repair for audio
problem. Original compaint was:

"NO AUDIO NOW. PREVIOUSLY AUDIO ON UHF SIDE WAS VERY LOW"

in two weeks it came back from Yaesu(via HRO) with this:

"REPLACED R76 TO 27 OHMS
REPAIRED OPEN DC LINE ON RX VCC"

now the radio is BETTER than it was NEW! Both sides are equally loud.

If you have this problem with volume mismatch, I would recommend sending it for a quick repair... I ignored the problem, until one day the audio completely went away, then I had to send it...

good luck to you all.

Saar.

= = = = =

Bob,

Hopefully, you will also get responses from some of the other key collectors
who are more knowledgeable than I am on specific variants. Your key sounds
like a typical "flameproof" / "Navy" key. I have a couple of those in my collection, although at the moment it is boxed up so I am unable to check that number. The flameproof come from the contacts not showing, and the Navy (guess) from the fact that there is a base under the knob.

The other point towards the Navy is the "Contractor Code", which I learned
in the July 1993 issue of the Vail Correspondent was adopted in 1916. The
later codes (ca. WW-II, etc) have the CCC-#####-C pattern, with the center
figure often in the 26000 range. CJB is "Contract" Jesse Bunnell, a good
name in the telegraph key business. 26008-A is the more specific model and variations. //I'm wondering if this is "26003-A" with a blurred or misread "3" vs. "8" .....

There are a number of excellent WEB sites that you can find through the various search engines, plus they point to each other. Many have

photos.

Try http://fhonix.metronet.com/~nmcewen/ref.html

for a starter, he has links to others. Regards, Dave K7HMP

From: Peter Orban
Subject: Kenwood CW filter help

I obtained a 455KHz 250Hz bw Kenwood CW filter that I would like to use
in a TS 450 transceiver. That radio uses the -1 type filters, the
filters are attached to a small pcb for easy installation. I was given a
pcb like that, and attached my filter to it. The TS 450 does not
recognize my filter. My guess is that some of the pins on the pbc are
used for "encoding" the filter type that the radio recognizes.
I am not sure from where my pcb came from (what filter did it have on it
before it was given to me), but I would appreciate if someone with
factory 250Hz or 500Hz bw 455KHz filter would look at the filter pcb and
would give the wiring of the individual pins.

Thank you very much for your help, Peter

From: w6uv@nospam.wco.com (Jerry Gardner)
Subject: New to 6M - Please Recommend Rig

I'm just getting into 6 meters and I'm primarily interested in weak-signal SSB and CW modes.

I'm thinking about getting an Icom IC-706 Mk 2. Is this a reasonable rig for 6M, or would I be better off getting a dedicated 6M-only rig? I don't currently have an HF rig or a multi-mode 2M rig, so a transverter isn't a good option.

Any and all recommendations are welcomed.

Actually, the "F" key must be pressed while entering "#212" with the keypad locked. Sorry, I forgot that in the
original post.

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is
such a large percentage of such "for sale" posts - maybe the group has
changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending
copies of a form letter to each errant WTB/T or FS poster about the same
idea?

I agree there needs to be SOME sort of structure, but the days of a
"self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet
seem to be swiftly going the same direction as the CB bands. God help us
all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio
73s Frank WQ1O

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)

Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think
this radio is especially good for crossband because you can combine
DTMF code squelch functionality with the crossband function to prevent
accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive
sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater
signal from a repeater that is about 80 miles away with the rubber
ducky antenna. The signal is intermittant on the ducky but when
attached to an outside j-pole, the signal is great. The w32a cannot
even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to
the j-pole at home. I was in the truck with my Kenwood v7a. My
output at 10 watts could be heard by him for about 3 miles. At 4
miles, he could not hear me at all but I could hear him (transmitting
at 5 watts) clearly. When I went to 50 watts, he could hear me but it
was scratchy.

Icom has tested the radio and says it is working according to spec. I
think that a receiver should be able to pick up a 50 watt signal with

an outside elevated antenna perfectly at a distance much greater than
4 miles.

Has anyone else had this problem? The UHF side does not have this
poor sensitivity.

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is
such a large percentage of such "for sale" posts - maybe the group has
changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending
copies of a form letter to each errant WTB/T or FS poster about the same
idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: Cellular mod on vx-1r

I just got my VX-1R radio. It works great. I performed the mars mod (add solder to pad 0 and 1) I then tried all the different combinations of keystokes that I could think of and power on. It is now receiving cellular with no problem. I do not know exactly what keys did it.

From: folaughlin@aol.com (FOlaughlin)
Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so
when it receives a signal on one band,it re-transmits it on the other,and
vice-versa. No mod is required to do this. It is explained in fair detail
in the Yeasu manual. My friend has that rig,and it works great. It also
has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs.
simult. I have the 8100R and it also has these features,plus ext. rec.
I think you will be very happy with it. Hope you get a good deal on the
radio
73s Frank WQ1O

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think
this radio is especially good for crossband because you can combine
DTMF code squelch functionality with the crossband function to prevent
accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater signal from a repeater that is about 80 miles away with the rubber ducky antenna. The signal is intermittant on the ducky but when attached to an outside j-pole, the signal is great. The w32a cannot even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to the j-pole at home. I was in the truck with my Kenwood v7a. My output at 10 watts could be heard by him for about 3 miles. At 4 miles, he could not hear me at all but I could hear him (transmitting at 5 watts) clearly. When I went to 50 watts, he could hear me but it was scratchy.

Icom has tested the radio and says it is working according to spec. I think that a receiver should be able to pick up a 50 watt signal with an outside elevated antenna perfectly at a distance much greater than 4 miles.

Has anyone else had this problem? The UHF side does not have this poor sensitivity.

From: Phil Wheeler <w7ox@ix20.ix.netcom.com>
Subject: mobile HF antenna advice

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and
a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see
Sept 96 QST for review). One advantage is that it has a tilt-over hinge
at the basew for garaging. Apparently it can be used with a trunk-lip
mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've
used an Outbacker on 20 m and prefer the Hamsticks. And not sure it
will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the
AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

From: wormser@osiris.cso.uiuc.edu
Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

* Continuation 3 of a split message *

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see Sept 96 QST for review). One advantage is that it has a tilt-over hinge at the basew for garaging. Apparently it can be used with a trunk-lip mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've used an Outbacker on 20 m and prefer the Hamsticks. And not sure it will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

From: wormser@osiris.cso.uiuc.edu
Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Subject: VR-1X Priority

Phil - Check out the instructions under "Dual Watch" (page 38) in the
owner's manual. Mine was the same way, and somehow I followed these
instructions and got the "Pri" to go to Channel 2 of VHF, but was in the
UHF Ham band when I did it! I followed the instructions blindly and
"moved" the PRI. Try and see if you can too....

Subject: What is a good starter 2m/70cm HT? (used or new)

Just getting started and I am curious what would be a good 2m/70cm handheld to purchase. I would prefer to spend around $300 and would not mind getting used hardware.

I've tried to check this newsgroup, and the web, but I'm having a hard time finding anything other than supplier advertising, forsales, or modification info.

Anyone have any input, or websites with critical reviews I could check out?

Thanks for the help!

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive
sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater
signal from a repeater that is about 80 miles away with the rubber
ducky antenna. The signal is intermittant on the ducky but when
attached to an outside j-pole, the signal is great. The w32a cannot
even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to
the j-pole at home. I was in the truck with my Kenwood v7a. My
output at 10 watts could be heard by him for about 3 miles. At 4
miles, he could not hear me at all but I could hear him (transmitting

at 5 watts) clearly. When I went to 50 watts, he could hear me but it was scratchy.

Icom has tested the radio and says it is working according to spec. I think that a receiver should be able to pick up a 50 watt signal with an outside elevated antenna perfectly at a distance much greater than 4 miles.

Has anyone else had this problem? The UHF side does not have this poor sensitivity.

I have checked the output voltages (9 and 3.7 V) from the AF/AVQ board, and I have cleaned & re-seated the connectors on the VFO, AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the digital display does NOT blank out (service manual says that if the PLL board loses its lock, the digital display will blank). I have cleaned the wiper on the main VFO tuning capacitor. I have listened to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a stethoscope. I have tried to monitor output from the AF/AVQ & PLL boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Subject: VR-1X Priority

Phil - Check out the instructions under "Dual Watch" (page 38) in the owner's manual. Mine was the same way, and somehow I followed these instructions and got the "Pri" to go to Channel 2 of VHF, but was in the UHF Ham band when I did it! I followed the instructions blindly and "moved" the PRI. Try and see if you can too....

From: rkatz21271@aol.com (RKatz21271)
Subject: What is a good starter 2m/70cm HT? (used or new)

Just getting started and I am curious what would be a good 2m/70cm handheld to purchase. I would prefer to spend around $300 and would not mind getting used hardware.

I've tried to check this newsgroup, and the web, but I'm having a hard time finding anything other than supplier advertising, forsales, or modification info.

Anyone have any input, or websites with critical reviews I could check out?

Thanks for the help!

* Use it as a paper weight
* Throw it at the neighbor's cat when it howls in the middle of the
night.
* Play catch with it
* Use it as a counter weight when throwing a line in a tree for an
antenna
* Apply 110VAC to it and watch it explode
* Put it in a package wrapped as a gift and leave it on a bus bench
* Put it under the front edge of your rig to make the dial more easily
turned
* Charge 100,000 MFd to 20 volts and discharge it through it to
rejuvenate the cells (wear safety glasses)
* Disassemble it to see how it's put together
* Offer it for postage expenses to somebody who wants to try to put new
cells in it
* Sell it to somebody on rec.radio.swap, saying that it's unused and
works fine and then read the flames start and the ranting and raving
* and best yet...throw it away

(Sorry, but I just couldn't resist...ask a leading question and you have
to expect a stupid answer!!!)

Drew, We need to talk! I,ve got 3 TS-930s! I love 'em! I just sold my
Drake Line and bought them. Two work great, and the 3rd one needs the
RF Driver stage fixed. (I bought it that way for $500.) I replaced the
parts and fired it up. One of the transistors ($35 apiece) burst open.
This was also the way I found the circuit when I first opened it up
after bringing it home-one of the transistors was busted open.

Evidently I overlooked something or the new transistor was defective. I
talked to a ham in Rocky Mount who had a 930 that developed a problem on
the Digital Display Board and he was told that there is no replacement
boards available so he dumped his.

Point is, I want all the information I can get about parts availability
and I will share what info I have with you.

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio
73s Frank WQ1O

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think this radio is especially good for crossband because you can combine DTMF code squelch functionality with the crossband function to prevent accidental triggering by other stations.

best of luck, Don (KE4KYO)

Right now, I'd go for 40 metres. Contacts up to 3000km should be quite
possible with QRP. Longer distances are very difficult. Thus 40m is
better for domestic operation.

Two years time 15 m should be good. International contacts will be much
easier on 15m than 40m.

For this period in the sunspot cycle, 40 meters for sure! I've worked Europe in the evening several times running 5 watts on 40 meters using a dipole 55 feet high. DX is possible, you just have to be patient.

Subject: Icom w32a problem - very poor sensitivity

Hi, John,

Everything you say leads me to the same conclusion - your W32 has a sensitivity problem. My W32 hears everything just as well as all my other receivers.

But to know for sure if you have a problem, you need to test it with a calibrated signal generator (part of a device often called a "service monitor"). In this area, most hamfests have someone set up with a service monitor testing HTs. You could also ask around on local repeaters, and as a last resort, ask at a local 2-way radio shop.

The radio should hear an audible test signal set below .2 microvolts. If the hard evidence proves a problem, you ought to be able to show Icom you need a repair.

From: "John D. Nell" <jnell@ezl.com>
Subject: Yaesu VX-1R Question/Comment

OK, I've had my VX-1R now for about a week and can not figure out how to enter independent TX/RX frequencies in a single memory across the VHF and UHF bands. Has anyone done that yet?

I can enter an "odd split" in the SAME band, vhf OR uhf, but not into a memory channel which lets me "transmit on UHF" and "receive on VHF". I use my Standard C508A this way all the time to "mobile extend". I was hoping to "shrink" my everyday HT even further with this little gem.

I guess if I don't hear about how it's done soon, this little baby will be for sale and the Standard C510 will take it's place in my HT corral!

BTW, I agree with whomever said Yaesu screwed up the "scanning" function of this HT. Only scan in a single band, come on....get with the plan, Stan!

Oh, one last thing... where's the VX-1R FAQ section? I don't have all day to surf the net looking for facts and fiction...but this Newsgroup is just fine :)

HELP!! NEC pagers (Cyrillic) WANTED
2Moderator: Sorry if out of conference.

Hello All,

Your help is heavily requested!!!

Our company named "Multi-Communication". We were established at January
1994. Our business - trade. We have a number of branches in different
countries. We employ Russian-speaking staff there. We use office
alpha-numeric paging system to organise its work. We would like to buy NEC
paging receivers (pagers) from you.
We would like to receive the price on NEC-21A, NEC-26B, NEC-20B and,

possibly, other 2-language Cyrillic-Latin alpha-numeric pagers. Please,
send us by fax delivery terms and conditions on them, too.
We consider to place an order on
1000 NEC-21A (100-200 monthly - depending on prices),
1000 NEC-20B (100-200 monthly - depending on prices),
1000 NEC-26B (100-200 monthly - depending on prices).
System:
Frequencies: 159,825+MHz and 161,950+MHz,
Rate: 1200 baud,
Format: POCSAG.
Please, call us:
007 095 921-4709,
007 095 971-5514,
007 095 971-5328.
Our fax:
007 095 921-7780.

Our email:
m-comm@dol.ru

If you have no possibility to deliver such volumes directly, please give us
the list of distributors with contact numbers.

Best regards,

Dmitri Ivanov

> Thanks and 73, Bob K9CMR

Bob,
I've had an ICOM 756 since 2/97 and had no problems with it,
whatsoever. I love the rig and the display. I felt the same as Yaesu's
comment until I played with one for awhile. Now I wonder how I operated
without it. It has an excellent receiver & very easy to operate. I've
heard of some hams who have had problems with the 756 but sent it back
& got it repaired. Just about all brands at times seem to have that
problem. Also are you aware of the 756 price drop? Now there's not
much difference for a lot more features. I also have a Kenwood TS570D
that I run mobile. If you're on a budget look at this rig also. I
compared it to the 920 & seems to me to be a better rig for the price
difference. Also ICOM told me the newer 756's have all the updates
already in the radio. Hope this helps. Thanks, Jack WA0VLT

does anyone know if this radio can be crossbanded?

Date: Tue, 08 Jul 97 11:41:21 PDT
From: gpewitt@execpc.com
Subject: Schematics needed A and B supplies

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.
One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

> http://www.dejanews.com/ Search, Read, Post to UsenetHi Alan,

You've done pretty well for a newbie!
Although I have not seen this problem in a Kenwood, I have seen it in
Icom and Yaesu- both with the same cause- small single turn variable
caps. In case of the Yaesu it was a frequency netting cap on a
heterodyne oscillator- drove me nuts. It occurred randomly and never
when I had the rig open. A hint from another ham sent me looking in that
direction. Replaced 2 or 3 and that was the end of it. Hope this helps.

From: dov_pincus@ibi.COM
Subject: Yaesu FT-50, scanning with PL bug

I found a bug with my FT-50 using PL tones, Has any one else
hit this? How do I communicate this with Yaesu?

If I set two different memory locations to the same frequency with
different PL tones and then try to scan them both. Very often (> 50%)
of the time either correct PL will not open the squelch. It seems if
it hits the correct channel first it gets through, but if it it hits
the other first the squelch will never open & it will just keep
scanning both channels.

Dov_Pincus@ibi.com
Still looking for a test in the NY area to get my ticket....

Federal law says parts must be available for 10 years. After that,
the manufacturer isn't obligated to maintain parts support. If the
supplier is off-shore, he may not even be required to honor the
10 year requirement. If the part is an industry standard part,
there likely won't be any trouble finding a replacement for a
longer time. But if the part is custom, after 10 years you may
be screwed. Also realize that the amateur radio manufacturers
are at the mercy of *their* suppliers. If they can no longer
get the parts, they can't sell them to you.

What law requires a company to supply parts for 10 years? I have never seen such a law. If there was one, why would the FDA have a regulation requiring medical device mfg. to supply parts for 7 years? I wlould not bet on yor chances of finding a part for a notebook computer 10 years down the line......just a thought.

From: cstampf@health.co.dutchess.ny.US (Charles Stampf)
Subject: DX77 vs R7000

I'm considering using a vertical multi-band antenna at my vacation home. It is a condo and there are antenna restrictions that prohibit a permanent installation. So, I've concocted a scheme whereby I can move an antenna into place on the elevated back deck during the dark hours and remove it after my operating session, without anyone being offended.

My dilemma is which vertical to choose. I've limited the choice to Hygain's DX77 or the R7000 from Cushcraft. Does anyone have any comments, suggestions or experiences regarding these antennae?

From: n9fh@qsl.net (Fred Helmstetter)

I have an Alinco DR-112 2m mobile for sale. It comes with the
TT mic and mobile mounting bracket but no box or manual. $175

Things I'm looking for if you want to trade:
- 220 Mhz mobile radio (old is ok)
- small HF beam (eg., A3, TA33 etc)
- 80/40 vertical (eg., Butternut, GAP? etc)
- medium duty rotator (eg., Ham IV)
- FT-1000MP (straight trade for the DR-112 ;-)

Thanks & 73,

Fred, N9FH

From: n9fh@qsl.net (Fred Helmstetter)
Subject: FS: Pyramid 20A DC supply

This PS has voltage and current meters on the front, overvoltage protection, built in cooling fan (quiet) and is adjustable from about 11-16VDC $50 plus shipping

I also have a couple of heavy duty adjustable (0-30VDC) supplies. These are rack mount jobs with remote sensing and V/A meters. One is 20A the other is 25A (continuous, for days...). Both are very heavy so local pickup is best. I'm in Milwaukee.

>
> My 2 cents...
> --
> Bryan ks4hr@injersey.com
>
There a a number of reasons why not to use the adaptor.BTW,mine only cost $5.95,still no bargain,kind of like the replacement antennas...
The reasons...
1.Looks Bad!
2.The SMA antennas have a "shoulder" that prevents the connector from being broken off the radio,and helps prevent stress on the connector.The BNC ducks and whips are pretty heavily built and wouldn't inspire confidence due to excessive bulk.If the radio is dropped,the antenna connector will probably break.....

My Standard C510A will be using some kind of replacement,but the damn things cost way too much.....Barry N8PVX

Use SMA to STANDARD BNC adapter and FT530 antenna, and you have almost
the perfekt match, it seems to me that this is a better combination than
the orginal antenna...

From: "Bob Snyder" <rsnyder@pcisys.net>
Subject: Help Identify This Key.

It's a black military(?) key, large knob about 1" high, larger at the top.
There is a base below the knob that is about 1" round. From the knob. the
lever goes straight back for about 1.5" with a 1/4" rise. Then the lever
becomes horse shoe shaped. In between the horse shoe are the adjustment
screws. Behind that is a black plastic cap that covers the connectors. On
the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

From: moliveri@geocities.com
Subject: UT-55 DTMF unit

I have an IC-229H with an UT-51 unit. Somebody told me (and I checked)
that the CPU locates or "sees" the unit by a short circuit between pins

1 and 2 of the J5 connector.

He told me also that, if I make a jumper between two pins on the
J6, the CPU believes that the UT-55 exists and lets me send the DTMF pager
codes.

I don't have the unit, but I would like to know what are the pins short-
circuited to make the test. Anyone can take a look on his UT-55?

Regards

Maurizio Oliveri

>
> My 2 cents...
> --
> Bryan ks4hr@injersey.com
>
There a a number of reasons why not to use the adaptor.BTW,mine only cost
$5.95,still no bargain,kind of like the replacement antennas...
The reasons...
1.Looks Bad!
2.The SMA antennas have a "shoulder" that prevents the connector from
being broken off the radio,and helps prevent stress on the connector.The
BNC ducks and whips are pretty heavily built and wouldn't inspire
confidence due to excessive bulk.If the radio is dropped,the antenna
connector will probably break.....

My Standard C510A will be using some kind of replacement,but the damn
things cost way too much.....Barry N8PVX

From: "Bob Snyder" <rsnyder@pcisys.net>
Subject: Help Identify This Key.

It's a black military(?) key, large knob about 1" high, larger at the top.
There is a base below the knob that is about 1" round. From the knob. the
lever goes straight back for about 1.5" with a 1/4" rise. Then the lever

becomes horse shoe shaped. In between the horse shoe are the adjustment screws. Behind that is a black plastic cap that covers the connectors. On the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

From: moliveri@geocities.com
Subject: UT-55 DTMF unit

I have an IC-229H with an UT-51 unit. Somebody told me (and I checked) that the CPU locates or "sees" the unit by a short circuit between pins 1 and 2 of the J5 connector.

He told me also that, if I make a jumper between two pins on the J6, the CPU believes that the UT-55 exists and lets me send the DTMF pager codes.

I don't have the unit, but I would like to know what are the pins short-circuited to make the test. Anyone can take a look on his UT-55?

Regards

Maurizio Oliveri

Subject: "HELP!!!" Noise in Kenwood TM-631A

I need help on my 2m/220

I run my radio mobile with it connected directly to the battery. I
have owned the radio for about six years now and never had a problem. About
2 months ago I started to lose stored memory. So I changed the lithium
battery. It did not cure the problem, however I ended up with another one.

When I tune the radio on 2m (in main band) to a fixed station (i.e.
NOAA) I get noise in the foreground and I can hear NOAA in the background.
When I do a band band change (220 now in main band and 2m in sub-band) NOAA
signal comes in clear. When I switch back to 2m in main band, everthing works
properly from there on as long as I keep the radio on. When I turn the radio
off, then turn it back on, the same problem occurs. I checked very closely to
the circuit where I soldered the battery to see for any circuit damage had
occured or if I lifted any traces. Everything looks fine. In fact changing the
battery was a very easy proceedure. I have checked wires and all.

Does anybody have a clue as to the problem? Any response will be
appreciated. Please respond to

djeo1@mail.telis.org

Thanks

Subject: Crossband repeat

I have a chance to pick up an Alinco dr 590 or a ft 5100 both for a very cheap price. My question is- Do either of these radios have crossband repeater functions? I like the features of the ft 5100 better but I'm mainly looking for the crossband function at this time. Any and all help will be very thankful....

From: abrayten@pen.k12.va.us (Andrew S. Braytenbah Jr)
Subject: Dwindling Kenwood parts availability?

Hello,
About one year ago I had my TS-930 serviced through the Virginia Beach authorized service center. The technician indicated that because of the age of the rig (13 years at the time), that he could not guarantee that parts would be available in the future, and that it might be desirable to look at newer equipment. A friend in the Richmond area who trades heavily in amateur equipment was also told this. So, is this concern just limited to the Virginia Beach Kenwood service center, or are there other authorized service centers on the west coast, or other places? How long do ICOM, YAESU and TENTEC feel disposed to support their products?
Any responses will be much appreciated.

From: "Paul Jordan" <jordan@*santanet.com>
Subject: For Sale??? You Might Be In The Wrong Newsgroup...

I really don't see a problem with people selling and buying stuff in this newsgroup. Maybe it could be a policy here that if they want to sell something, they put FS in the beginning of the subject and if they want to buy, they put WTB in the front of the subject. That way, if you're not interested in buying or selling, you can just go on to the next subject line. I don't think you'll ever get people to stop buying and selling in here though. To tell you the truth, that's exactly why I come to this newsgroup.
I see that a couple of replies get right into the main problem of ham radio and that's all the crap that's is being said on the higher licensed bands. That sure makes me want to take the time to learn code so I can run right out, spend $1000's on a new rig and antenna. Boy, I can't wait. My clean 2 meter conversations just aren't cutting it anymore. We just don't seem to have problems like that here in Alaska. I guess we just run a clean net up here.
Well, those are just my opinions and I'm sure you'll hear a lot more.

Dick,
it says to
(1) Turn off the power supply
(2) Remove top cover of control unit
(3) Remove the 4P connector with loop lead
(4) turn on the power supply
(5) Check that the content of every memory is 5.000.

After checking this state, insert the 4P connector wi loop lead, with
the power applied.

Subject: JST-245 HF Rig

Gareth Crispell wrote:
>
> Does any one know anything about these radios? What is the real dope?
>
> N1MSV

Hi Gareth! I have a JST-245 that I bought almost two years ago. It
has been a dependable radio so far with a few bugs that have been fixed.

I have a very early version that had the first release firmware that had
a goofy situation wherein if a narrow bandwidth receive filter (1.8 KHz)
was selected, the radio transmitted through it too! That was fixed with
a new prom.

The original calibration of the noise blanker (circa '95) was pretty disappointing. I use the radio as an IF for VHF/UHF transverters and therefore suffer from the dreaded "line noise" on occasion. The original noise-blanker was a poor performer in reducing the VHF line noise. However, after I installed the new component values from the "noise-blanker mod" in my radio, the blanker has turned out to be the BEST noise blanker I have ever used -- period. I really treasure how well it cuts down any lingering line noise on 6 or 2 meters (even 432,

Joe, I am not a programming wizard, but they use their CI-V protocol.
I can't say much more, as I don't know if it is TTL or RS-232 level. I
do know that the interface uses two wires to connect to the radio via a
shielded cord, so I would guess the levels are TTL.
What I do know is that the interface that is made by MFJ is much cheaper
than the one made by ICOM or others. It is about $50 list price (AES).

Hope this helps!

786. Re: Yaesu VX-1R Vers. FT-50

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-09 00:00:00 UTC
From: Phil Wheeler <w7ox@popd.ix.netcom.com>
Message-ID: <33C39341.7525@popd.ix.netcom.com>
Source record: 170837

I have both. For an only rig, get the FT-50: 5 watts vs. 0.5 watts is a big difference.

I like the VX-1R. But, as with the Std C508, it is a pretty short-range propostition (near another ham hiking, or near a repeater).

Phil

Hi all,

My homepage is getting bigger and will continue to do so until Telenordia tell me I have run out of disk space on the server. I am currently building an HF bands general coverage receiver using valves. When I can get a 'round-twit' I will be posting this as well as the others listed below. I will present it in several logical stages, each of which is a complete project in its own right.

You can find my homepage at:

http://user.tninet.se/~acz732k/

I make no apologies for the NO.ONE@NO.NAME address. My address is freely available on my homepage - I just don't want all the adverts and junk mail that goes with a correct address.

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)

250mW HF bands CW TX
4 watt PA for 250mW HF bands CW TX
5 watt CW IC TX
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components

>to give more money to Yeasu.

Well, I called Yeasu and they referred me to a company called RT Systems (205-880-3093). I called them up last week and they quoted a price of $8.00 or so (+SH) for jack plus tinned pigtail. Mine are still "in the mail" so I can't tell you much else. Not the cheapest, but I could not find it in any of my standard electronic part sources. By the time you get past minimum orders etc, it is not likely that I would have saved more than a few more bucks in the best case, anyway.

I wish I had read this post earlier. I too was taken for a ride by Mr.
Terry Keith Hammond
Tiger Broadcast Services
162 Maple Street
Auburn, Al. 36830
(334) 821-3329 Voice & FAX (i've seen 921-3329, too, which is it??)

He told me has was going to ship me 2 Technics 1200 MkII turntables in great shape with everything except the lids. I got 2 barely recognizable turntables minus lids, feet, tonearms, weights, stands, power cords ripped, everything. He shipped them in a cardboard box with a few peanuts and they crushed each other. he went on about" packaging them properly", "cleaning and fixing them" for over a month. What I got was totally worthless. I believe in karma, and he's got some fun stuff waiting for him.

god if anyone can help me with some spare parts i'd be appreciative. i'm a school teacher and i try to do good in the world and i get shit on like this. I'm out $430 for a pair of non-working turntables that are worse than the belt-drive ones i have already.

UPS doesn't help matters. as far as I'm concerned they are AIDING AND ABETTING crime via mail. The only thing they'll do is send them back, then he'd have the tables AND the money. They allowed him to ship these even though the box is falling apart.
United Parcel Service and the whole COD system is warped.
By the way if anyone knows a place to send a complaint to UPS (as if it would do any good) please let me know.

By the way, khammond@mindspring.com is no longer a working address, like all good slime balls, Mr. Hammond has disappeared.

all 1200 MKII parts donations can be sent to

ed2026
2701 W. 32nd Ave. #6
Denver, CO 80211

thanks for listening, sorry for the negativity, i feel lousy

It is part of the Magnisun (sp) consumer protection and warrantee
legislation. The provision was aimed at the appliance and auto
industries, but its wording isn't limited to them. A manufacturer
can dodge the law by disclaiming all warrantee at time of sale,
IE by representing the product "as is" with no claim of fitness
or suitability stated or implied. Big ticket items almost never
are sold that way because it alarms the consumer to lay out a
large chunk of cash without some recourse if the product fails.

> Why not buy the 8 buck adapter and use a STANDARD BNC antenna????

That does work, but it creates a somewhat dangerous situation with the adapter and antenna, or a stack of adapters (SMA-BNC-259) when connecting to coax, that is unsuppoted but for the tiny SMA on the HT.

No, better to buy and aftermarket antenna designed for that connector, or to hunt up SMA connectors to crimp/solder onto your coax.

Does anyone know the difference between the Japanese and American version of the DJS-41? My Japanese friend wants to do the extended mod and be able to use it both on the American FRS band and also on the Japanese FRS band which is in the 422 MHz range.
For those who like to know, The Japanese FRS band consists of 9 and/or 11 basic simplex channels plus 9 more for repeater use. Simplex from 422.2 to 422.3 MHz. Power output is usually limited to about 10 mW. This

licence-free band has been in use for many years and is very popular there. There are many repeater clubs across the country.

A friend of mine, who doesn't have internet access, would like to sell his Yaesu FT-620B, but he has no idea of this rig's value. It is in excellent condition (still has the protective plastic sheet over the fron panel) and includes a mic and manual. For those interested, this is a 6-meter CW/SSB rig that puts out about 25 watts (I think).

I will forward any messages.

tnx es 73 - John, W4AU

808. Yaesu FT-50 vs FT-51?

813. Re: Yaesu FT-10R 2Meter HT $225

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-09 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <5q0qro$6oo@redgreen.cs.ubc.ca>
Source record: 170864

barryoXX@fastlink.com.au writes:
>The FT-10R has no meters. All information is on the display.

Well, it does in fact have an S-meter, which is part of the display.

No one suggested that it had two meters, though. They were saying that it transmits on the two meter band. For people in some countries, that would be spelled "two metres".

Most adults reading this are able to deal with the fact that this particular unit of length is spelled differently in different countries, without feeling the need to make stupid comments.

Or did you really not understand that "meter" is both a device and a unit of length in some countries?

Dave

(from Canada, where the official spelling is in fact "metre", but everyone understands both)

Message-ID: <33C3F828.9A4EFD6D@myself.com>
Source record: 170866

I am in the process of studying for a Tech license adn want a HT as my first radio. Form the catalogs and sales literature I have seen, I have narrowed my choices to the following in order of precedence:

Yaesu FT-51HP
Yaesu FT-50RD
ICOM W32A

I would like some comments on my selections, and particularly on the features and capablilties of the FT-51 versus the other two. Recommendations on where to purchase will be welcomed. From what information I have, prices are comparable for the HTs, it seems there is some difference on the accessories. I would want a compatible quick-charger, extra battery, case, programming software, and microphone. Please advise via email.

Also, are the short 4cm +/- antennas worthwhile? Thanks HT KF4SXT.

825. Clegg FM-DX Manuals

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-09 00:00:00 UTC
From: markr@phx.mcd.mot.com
Message-ID: <5q11cp$3ao@drn.zippo.com>
Source record: 170876
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap,rec.radio.amateur.boatanchors

I'm looking for the service and/or operator manuals for a Clegg FM-DX 2m radio.

The radio came into my hands without a mike. There are only two wires where the mike was! In lieu of a manual does anyone happen to know what these wires are and if there are more wires used? If you have a service manual I'd be more than willing to pay for copying/shipping costs.

This rig also has the LED burnout "problem" - is there a Radio Shack part number for these LEDs?

Thanks for any help!!!!

Did I miss something, or is Burt Fisher a hero?
Why haven't I heard of him outside of this newsgroup?

I've never hear anyone, or anything, receive so much
attention on a newsgroup. He must be a very, very
important fellow to receive so much attention from you
guys. If there's something not to like about Burt, ignore
him. He has all you folks wrapped around his finger.
He says something, and about fifty of you have
to get your digs in. Heck, even if I were so unpopular,
I'd probably string some folks out like that, too, if it's so
entertaining to do so.

Source record: 170883

Recieved the radio from AES today. Have it set up and operating in the shack, for familiarization BEFORE mobile installation.

Fist reports on 2 meter FM said I had loud hum in audio. Going to simplex and turning off PL eliminated the problem -- and improved my audio level and quality.. Clearly the injected PL is to high in this rig.

Will call Icom tomorrow (of course I found out after they had shut down for the day).

Has anyone here experienced this? Is it a user adjustable funtion (given a service manual)? Does anyone have a service manual (706 should be the same in this area) who could fax me the page or two showing where the adjustment is? (Fax is 310-214-1873 or 310-813-1370 daytime).

Obviously I could return the radio for a new one. But since it was purchased mail order, I'd rather just do the adjustment myself, if there is one.

I have heard the same thing. They are always WINING about poor sales
and threatening to get out of the Ham business because they are loseing
$$$$$$. This CRAP has been going on for Years. Either get out of the
Ham business or stopp your crying! Their advertising is also like this.
On the Kenwood web site it said that Kenwood would stop all the Coupons.
They explained that if a Ham saw a radio they liked but no discount
this month they would just wait till next month knowing that the next
coupon was right around the corner.(Real nice way to treat us
customers).

The newsgroup charter *specifically* says that Sale and Want ads
are not to be posted here. On the other hand, rec.radio.swap is
chartered for the sale and want ads. We get the best of both worlds - and
a little more focus on the appropriate topics - when people exercise
some judgement about where a particular posting is appropriate.

Source record: 170961

This appears to be the full modification for the vx-1r radio. I modified another radio today and it is wide open. This modification also opened the celullar receive. It is also transmitting everywhere that makes sense. The ARS function is disabled after the mod.

Well, here it is.... Enjoy!

John Morronga wrote:

>Am interested in buying a handheld with wide receive capability. Please
>tell me how you like your VX-1R

Nice unit, tiny, good rx and tx, but one main flaw: Memories stink

I can't understand in this day and age why Ham radios still only
have 40 or 100 or so memories... christ, my little home brew PLC for
work has more memory than all my ham rigs combined and its a small as
the VX-1R... When are the manufacturers gonna get it right and just
put 5000 or 10000 memories in the damn things and make it
configurable, ram is cheap and small today...no excuse for this.

The problem with the Vx-1r is the advertising said 200+ memories,
but only 40+ are usable with settable tones etc, the other 140+ have
to be used in a different powerup mode and no setable tones etc, and
there are other quirks with the memory.

Aside from that, if you can live with 40+ memories, its great...

Is there any Rx//Tx mods for this new dual bander.
I would like to restore the radio for extended Rx! Any info wanted about this.

Thanks for your time,
Dennis La Praim

6m is a band that is full of challenge, exciting during openings and
deadly boring during unfavorable propagation. If you are serious in
pursuing weak signal DX, than a dedicated rig should be considered.
An opening can last for minutes or hours, and constant monitoring is
the best way to make those contacts that others dream of.

A good standard is the IC551 by Icom. You can find them from 350.00 to
500.00, and it is offered in 10 watt (551) or 100 watt (551D)
configuration.

An older analog rig such as the Yaesu FT620 can be found in the 200 to
250.00
price catagory. It has 10 watts out. Some will tell you that you have to
have at
least 50 watts. Maybe so, but I can recall starting a QSO mobile using a
FT620
with a mag mount antenna on top of my minivan, and resuming it on the 551D
thru
6 element long boom yagi, horizontally polarized, with little noticed
signal deteriation
on the other end. When the band is open, it is open.

Until you are sure that you really want to chase 6m DX, it may be better to
opt for
on of the older rigs to testdrive for a while. Then, if you decide to step
into a newer
rig at a later date you will have a piece of gear that can be used mobile,

or as a stand-by
rig or for trade-in.

Keep in mind that one of the most noticable results of the non-coded
Technician class is
the increased price of VHF and above gear. I don't think this was by
happenstance. With
the entry-level price for an all-mode anything that operates above 50 MHz
starting near the 1K$
mark, you may wan't to proceed slowly

Source record: 170968

Yep Only one band at a time. But you can do a "Dual Band Watch". Which means that it will only watch one channel. The memory is configured like Yaesu didn't know what they were doing! It has two groups of memory that you can switch between by turning off the radio and turning it back on holding the M/V and the AR key. The first group holds 52 memories that is used for 8 of the 9 bands (BC Band has it's own 10 channels). You also have 10 scan edges and a home channel per band (except BC Band).
In the second group you have 142 memories BUT they will not write the PL tone into a channel!!!

In article <33C26258.2611@pacbell.net>, kd6aw@pacbell.net says...
> The specs look interesting, anyone know about this radio??
>
> Paul KD6AW
> kd6aw@pacbell.net

Well,
I've had it for 3 weeks or so,and the only real complaint about it is the lousy antenna.It seems to work ok in the 144-148 range,but it stinks as far as listening to anything else in the VHF range.155 police departments are very weak,and pop in and out all the time when you are walking,driving,etc.The scan speed could be better,but if you sort the freqs from lowest to highest,it's not too bad.Battery life is great,I'm just getting going on the third set of batts!I'm not TX'ing very much,but seem to get about 48 hrs of recieve time on a set.I can hear Detroit PD quite often (453MHZ)on the stock duck,about 50 miles away.Uhf seems to be pretty good,less intermod than some of my other radios,even with the mobile antenna connected(just a cheap dual band "cell style"antenna).
One thing is an annoyance,but no big deal is that the radio won't remember search increments for each "PS"(program scan).If you are searching in say 915-940 in 30KHZ steps(Hmmmm,I wonder why anyone would do that?)when you go to 460 and want to do 12.5khz steps.you have to change it via the menu.No biggie,it takes a couple of seconds,but it bugs me.The manual is goofy,lots of mistakes and it's disorganized,you have to look on several different pages to do things that are usually done together.For example,you have to look on one page to turn the repeater function on,another page to set the offset,and so on.It was easier to learn than my Icom 24AT,but still was confusing,mostly due to the weird manual.All in all though,I'm very happy with it....Barry

848. Yaesu VX-1R version

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-09 00:00:00 UTC
From: Greg Ottria <gottria@earthlink.net>
Message-ID: <01bc8c20$b19e1260$32f02399@gottria.Earthlink>
Source record: 170971

I bought a Yaesu VX-1R and had problems with it so I got a new one and noticed that if you hold down the "AR" button and power on the radio it puts it in test mode with the whole display on and then if you keep pushing the "AR" button it cycles through the patterns. At the end of the mode it gives you one letter and three numbers. The first radio I had it was "A 104" (I think thats what it was) and now when I do the test mode It says "A105". I think it's a new software version, the only difference I noticed between the two is on the old one (A 104) is that when you were in "BCBAND" and you checked what mode you were in (#32) it would say narrow FM and with the newer unit (A104) when you check the mode it says AM. Other than that I can't find anything else.

Phil,
Tried to reach you at home, your line is busy on the
internet.
About the new VX-1R , what is the RX range on it and
comparing it to the FT-50R how does it hear out of band,
any intermod??
Interested in hearing more about it. When I see the FT-5OR
fo $320
and compare it to the $300 VX1-R, you get more Pout, and other
stuff, how do you like it, and what is the different battery
capacities.
Does a higher amperage battery make it thicker or longer, or
is there only one battery type.

Can I use my same quick charger
NC-50, and use a different insertable sleave??

Nope.

> How is it on charging NiMH battery packs?

This I can help you with.

I have been using the NC-50 to charge a Maha MH-FNB-38 NiMH battery pack, and it works fine. The battery had a "break in" period, during which the charger would switch to trickle too early, resulting in a partial charge. When that happened, I (on advice from Maha) re-inserted the battery into the charger to kick it into rapid mode again. After 2 short rapid charges and some trickle, tha pack was up to almost normal. I carefully monitored the pack during this procedure, and it never got past about 30 deg C. After repeating the 2-charge procedure for about the first 5 pack cycles, the pack broke in and now charges just like my Yaesu factory NiCd.

Good luck.

Hello,

Does anyone out there know of a way to get the display lamp (LED?) in my Kenwood TH-75A HT to stay on all the time. As it is, it will only stay on for about 10 seconds after the last key/button is pressed.

I'd love to use this radio in a dimly lit (or dark) car, and fumbling for the momentary contact light switch is something I'd like to leave behind.

I have heard that a number of HTs have a neat trick built-in: If you hold down the FUNCTION button and press the light button, the lamp stays on. It's too bad this doesn't work for the TH-75A.

I'd also like to find a source for a 4 terminal plug like the one on the FT-50. I did find out that Yaesu's microphone adapter, I think it's a CT-30 brings out all 4 of the terminals to standard jacks. The earphone/speaker is a 1/8 inch monaural jack and the mic jack is a 3/32 stereo. The ring terminal of the mic jack is the data connection used for cloning. Tips of each plug are speaker and mic, sleeves are ground. Unfortunatly, the 3/32 stereo plug is as hard to find as the 4 terminal Yaesu plug. However, Radio Shack sells a stereo adapter that converts from 3/32 to 1/8. I forget the part number. Actually all these measurements are probably metric but it's too early in the AM to do the conversion in my head.

HI
I would like some information on a Channel Master combo. Both are all tubes units. The AM/FM receiver is a Channel Master Model 6612 and the Amp is Channel Master Model 6601. There are (4) 6BQ5 for the output. It is most likely a 25 Watt unit. I have the following Questions:

1) One of the 6BQ5 gets extremely hot and glows a bright red. Any Ideas on what could cause that?

2) Anyone have a schemetic or any info on both units?

3) What are their approx. values?

4) If interested, make me an offer or will trade for other Radio, Scanner or computer stuff.

Thanks
EJ (KC5EPI)

I want $275 or best offer. Preferrably in the Washington DC area. This thing goes for $320-$340 new.

This is the very small dual band/wide band ht. It can be configured to scan 6 banks of 10 channels each. For a total of 60 programmable freqs to scan.

It also transmits on 1/3 of a watt. Weak yes...but you can't beat it for the size.

A very good deal....but I need the cash.

Thanks to all that read this posting.
I am looking for information on how to construct a line frequency meter for the purpose of monitoring the output and aligmnent of generators. I would like it to be able to provide a linear voltage to indicate frequency at 110VAC. A generating set that is used at a local repeater site (10kw Kohler) has a standard needle type meter that reads out from 45 to 65 cycles. I have a vibrating reed type meter at this time, but would like to constructy a meter that can be permantly attached to the generator (I have mort that one genset). I know there can't be much to the circuit, but I don't know
where to start. (The simpler the better, less chance for trouble) Please respond via e-mail if possible.

Thanks & 73,
Josh KD6KML

Dear Friends:

As part of an estate sale announced earlier, there remains a Yaesu
FT51R Dual Bander HT with the following accessories:

VC-22 VOX headset
computer control software package with cables
cigarette lighter adapter
extra chargable battery 9.6 v

This HT was purchased late last year.

There is also a DAIWA 2-mtr amplifier, 2 watts in-35 watts out, with
mobil bracket and extra BNC cables.

Also there's an older 2 meter HT, Kenwood TR2500, with 2 extra
battery packs and desk charger.

Most of the other items mentioned earlier have been sold already.

it is still Private Line. Amateurs call it ctcss [continuous tone coded squelch system] and use more tones than the standard set offered in systems used in the commercial side of the house. police fire rescue business band etc.

>1) One of the 6BQ5 gets extremely hot and glows a bright red. Any Ideas on
>what could cause that?

Don't run it red hot for too long at a time, you will destroy it.

My first guess would be that the hot 6BQ5 has lost its grid bias
somehow. Check the grid voltage on pin 2 of all the tubes with no
signal. They should all be the about the same and measure somewhat
negative. If pin 2 on the hot one is 0 or close to 0, then check the
various components connected to it until you find one that is wrong.

Stereo amps like this should be easy to troubleshoot since you have
one channel that you can compare to to see what a correct circuit
should look like.

869. TRADE HARD DRIVE FOR 2M RIG

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: brwddude@aol.com
Message-ID: <19970710235201.TAA18737@ladder02.news.aol.com>
Source record: 170694

Looking for a good, clean, used 2m mobile rig. Willing to trade even for either one or two hard drives I have. Both are new Western Digital IDE drives, one is a 1.2gb, the other is a 2gb. Both are in original shrink wrap static bags, never used.

If interested, EMAIL me.

Thanks,

Gary/WB4YQR

same aisle as the inflatable nuclear fallout shelter. =]

seriously tho, a web search of "alternative power" will yield many
places to get handcrank generators and the like. i don't know if anyone
built a production 2 way that is hand cranked.

> ws4s@infoave.net

I have a 251A and the original manual. The 251E option had a tone burst (1750khz) board addition which connected to J6 on the main board. This is a four pin connector. If you have the schematic for yours this should give you what you need to know for inserting the audio. If you don't the schematic, let me know and I'll give you the pin out. 73, K6KME

Source record: 170699

Kenwood TS-60S is a fine 6 meter all-mode radio. Price is abt $900 US.

But you can buy the latest Icom 706 MKII for $450 more and it is all modes on HF, 6 and 2. There are original 706s new available for around $1100 new, I think also a good deal.

Used market should be even better.

All are mobile radios, neat for hill-topping. Ooops: I've been to Holland/Niederland. Hill topping may not be of much interest for you!

Phil

875. Mods for VX-1R ?

Newsgroup: rec.radio.amateur.equipment

Subject: *** For Sale: MFJ-989C 3KW Antenna Tuner

Subject says it all. I'm selling my MFJ-989C 3 Kilowatt (PEP) antenna
Tuner. This is probably one of the best pieces of equipment I've ever
owned. I'm moving and won't be able to take it with me (plus I need the

money to pay for the move). It's it great condition.

Make an offer. Amateur Electronic Supply
(http://www.aesham.com/mfj.shtml) lists this item for $299.95, what's
YOUR price?

Please respond via email only.

: KD4QCX
I recently had my 930 RF stage replaced. Ouch.

The dealer I sent it thru told me that Kenwood is no
longer accepting 930s for repair if that repair involves
the Phase Locked Loop assembly.

From: "Thomas Johnson" <n2rif@kwiknet.net>
Subject: FS: TS-440/SAT + MUCH MORE!!

Hello All;
I am selling the Kenwood TS-440SAT with the optional PS-50 power
supply and optional Kenwood MC-60 amplified desk mic. All has less
then 5hours of use. I'm the 2nd owner. The 1st owner purchased this
unit not knowing about his qth's restrictions on no outside antenna
laws. Both of us are non-smokers..
Also all original paperwork, cartons, user's manual, covers
for the 440 & PS-50 & optional service manual are included. I have
the MFJ-1272BX tnc-microphone switchbox also if interested..
Asking $750 for TS-440/SAT with both manuals, paperwork
cover & original carton. This unit has the auto
antenna tuner, been modified for "MARS" and the
optional 7 digit LED read out. Has 100 memories
plus much more.. We detail if interested
Asking $175 for PS-50 with cover and original carton
Asking $85 for Kenwood MC-60 desk mike
Asking $970.00 + shipping. For all the above Or Best Offer.
This is a must see hf setup and I would prefer any potential buyer
to see all the above before buying.. This is One Great Setup..
Reason for selling is strictly financial. Please re:me either through
Packet: N2RIF@WM2F.#SNJ.NJ.USA.NA
Or Better
Email: n2rif@amsat.org
My phone# is: (609) 386-9382 but sorry it is busy most of the time.
You can try though anytime from 10am to 10pm ET..
Thank you for reading my sale's bulletin.

From: jskalski@acsu.buffalo.edu
Subject: FS Teflon hookup wire

BUILD SOMETHING!!!

Silver plated- stranded 22 and 24 AWG teflon insulated hookup wire
assortments.

five rolls 50 feet each (250' total) in five different colors.

this wire is used in military contracts due to its high quality,
durability and overall high reliability. it is rated at 200dC /600V

It solders *very* nicely and it will not melt under ordinary soldering
conditions. (unlike cheaper grades of wire)

the 250' assortment pack is $15 plus $3 for priority 2 day mail in USA

If interested contact me by Email to reserve a pack.

Jim (N2GO)

From: "Dudley Hurry" <jdhurry@ingr.com>
Subject: Icom IC-756 vs. Yaesu FT-920

Bob,

I just recently purchased a FT-920 and have been very pleased with the performance of the transceiver.. So far it has done everything that Yaesu says, while not having a IC756 to directly compare to side by side, the 920 does seem to have a very good receiver and lots of features to keep one fully employed configuring and operating the radio. My previous radio was a 25 year old pair of Drakes (R4B, T4XB) while they had been great radios, the technology had far outrun their usefullness in today's crowded bands. I particularly like the tunable DSP and the tunable notch filter. I also have the narrow CW (500hz) filter, and awaiting the FM module (backordered).

My biggest reason for the purchase of the 920 over the 756 was that I thought the display of the 756 looked too confusing and not as straight forward (maybe due to past experience) as the 920.. While I'm sure that one can get very proficient operating the 756, I tend to not operate for months at a time, did feel like going thru retraining everytime I sat down for a short QSO.

So far I'm very happy, which is good, cause I may have this radio for atleast 20 years.

Good luck,
73's
Dudley Hurry

Subject: Sell/Trade KW Matchbox

Will trade Johnson KW Matchbox with SWR unit and manual.
It has been in storage since the mid-80's.

CONDITION:
Electrical VG
Mechanical VG
Appearance G

There is some paint wear, panel lettering fine, plastic face
on panel meter shows some hazing. No dents.

Want a Yeasu FRG-7 or FT-757 in VG condition. Other SS HF TVR
operating on 12Vdc considered. Eyeball trade preferred.

Will sell Matchbox for $250 + shipping (firm). No COD's.

Please reply by email to avatar@frii.com

Subject: Yaesu VX-1R Scanning?? 1 band...

What's the deal with the new Yaesu VX-1R and scanning....I read somewhere here that it 'only scans in one band'...can someone elaborate on that...I checked one out at HRO Saturday and loved it, but I'll use it more for listening than for TX so scanning is key. I gather it has 9 groups of chanels, 290 altogether...is that 10 scan edges for searching or what?

Thanks for any info.

wrote:

>Am interested in buying a handheld with wide receive capability. Please
>tell me how you like your VX-1R

Nice unit, tiny, good rx and tx, but one main flaw: Memories stink

I can't understand in this day and age why Ham radios still only
have 40 or 100 or so memories... christ, my little home brew PLC for
work has more memory than all my ham rigs combined and its a small as
the VX-1R... When are the manufacturers gonna get it right and just
put 5000 or 10000 memories in the damn things and make it
configurable, ram is cheap and small today...no excuse for this.

The problem with the Vx-1r is the advertising said 200+ memories,
but only 40+ are usable with settable tones etc, the other 140+ have
to be used in a different powerup mode and no setable tones etc, and
there are other quirks with the memory.

Aside from that, if you can live with 40+ memories, its great...

6m is a band that is full of challenge, exciting during openings and
deadly boring during unfavorable propagation. If you are serious in
pursuing weak signal DX, than a dedicated rig should be considered.
An opening can last for minutes or hours, and constant monitoring is
the best way to make those contacts that others dream of.

A good standard is the IC551 by Icom. You can find them from 350.00 to
500.00, and it is offered in 10 watt (551) or 100 watt (551D)
configuration.

An older analog rig such as the Yaesu FT620 can be found in the 200 to
250.00
price catagory. It has 10 watts out. Some will tell you that you have to
have at
least 50 watts. Maybe so, but I can recall starting a QSO mobile using a
FT620
with a mag mount antenna on top of my minivan, and resuming it on the 551D

thru
6 element long boom yagi, horizontally polarized, with little noticed
signal deteriation
on the other end. When the band is open, it is open.

Until you are sure that you really want to chase 6m DX, it may be better to
opt for
on of the older rigs to testdrive for a while. Then, if you decide to step
into a newer
rig at a later date you will have a piece of gear that can be used mobile,
or as a stand-by
rig or for trade-in.

Keep in mind that one of the most noticable results of the non-coded
Technician class is
the increased price of VHF and above gear. I don't think this was by
happenstance. With
the entry-level price for an all-mode anything that operates above 50 MHz
starting near the 1K$
mark, you may wan't to proceed slowly

> The specs look interesting, anyone know about this radio??
>
> Paul KD6AW
> kd6aw@pacbell.net

Well,
I've had it for 3 weeks or so,and the only real complaint about it is the
lousy antenna.It seems to work ok in the 144-148 range,but it stinks as
far as listening to anything else in the VHF range.155 police departments
are very weak,and pop in and out all the time when you are
walking,driving,etc.The scan speed could be better,but if you sort the
freqs from lowest to highest,it's not too bad.Battery life is great,I'm
just getting going on the third set of batts!I'm not TX'ing very much,but
seem to get about 48 hrs of recieve time on a set.I can hear Detroit PD
quite often (453MHZ)on the stock duck,about 50 miles away.Uhf seems to be

pretty good,less intermod than some of my other radios,even with the mobile antenna connected(just a cheap dual band "cell style"antenna). One thing is an annoyance,but no big deal is that the radio won't remember search increments for each "PS"(program scan).If you are searching in say 915-940 in 30KHZ steps(Hmmmm,I wonder why anyone would do that?)when you go to 460 and want to do 12.5khz steps.you have to change it via the menu.No biggie,it takes a couple of seconds,but it bugs me.The manual is goofy,lots of mistakes and it's disorganized,you have to look on several different pages to do things that are usually done together.For example,you have to look on one page to turn the repeater function on,another page to set the offset,and so on.It was easier to learn than my Icom 24AT,but still was confusing,mostly due to the weird

6m is a band that is full of challenge, exciting during openings and
deadly boring during unfavorable propagation. If you are serious in
pursuing weak signal DX, than a dedicated rig should be considered.
An opening can last for minutes or hours, and constant monitoring is
the best way to make those contacts that others dream of.

A good standard is the IC551 by Icom. You can find them from 350.00 to
500.00, and it is offered in 10 watt (551) or 100 watt (551D)
configuration.

An older analog rig such as the Yaesu FT620 can be found in the 200 to
250.00
price catagory. It has 10 watts out. Some will tell you that you have to
have at
least 50 watts. Maybe so, but I can recall starting a QSO mobile using a
FT620
with a mag mount antenna on top of my minivan, and resuming it on the 551D

thru
6 element long boom yagi, horizontally polarized, with little noticed
signal deteriation
on the other end. When the band is open, it is open.

Until you are sure that you really want to chase 6m DX, it may be better to
opt for
on of the older rigs to testdrive for a while. Then, if you decide to step
into a newer
rig at a later date you will have a piece of gear that can be used mobile,
or as a stand-by
rig or for trade-in.

Keep in mind that one of the most noticable results of the non-coded
Technician class is
the increased price of VHF and above gear. I don't think this was by
happenstance. With
the entry-level price for an all-mode anything that operates above 50 MHz
starting near the 1K$
mark, you may wan't to proceed slowly

Subject: STANDARD C510A EXPERIENCE

In article <33C26258.2611@pacbell.net>, kd6aw@pacbell.net says...
> The specs look interesting, anyone know about this radio??
>
> Paul KD6AW
> kd6aw@pacbell.net

Well,
I've had it for 3 weeks or so,and the only real complaint about it is the
lousy antenna.It seems to work ok in the 144-148 range,but it stinks as
far as listening to anything else in the VHF range.155 police departments
are very weak,and pop in and out all the time when you are
walking,driving,etc.The scan speed could be better,but if you sort the
freqs from lowest to highest,it's not too bad.Battery life is great,I'm
just getting going on the third set of batts!I'm not TX'ing very much,but
seem to get about 48 hrs of recieve time on a set.I can hear Detroit PD
quite often (453MHZ)on the stock duck,about 50 miles away.Uhf seems to be

pretty good,less intermod than some of my other radios,even with the mobile antenna connected(just a cheap dual band "cell style"antenna). One thing is an annoyance,but no big deal is that the radio won't remember search increments for each "PS"(program scan).If you are searching in say 915-940 in 30KHZ steps(Hmmmm,I wonder why anyone would do that?)when you go to 460 and want to do 12.5khz steps.you have to change it via the menu.No biggie,it takes a couple of seconds,but it bugs me.The manual is goofy,lots of mistakes and it's disorganized,you have to look on several different pages to do things that are usually done together.For example,you have to look on one page to turn the repeater function on,another page to set the offset,and so on.It was easier to learn than my Icom 24AT,but still was confusing,mostly due to the weird

Subject: *** For Sale: MFJ-989C 3KW Antenna Tuner

Subject says it all. I'm selling my MFJ-989C 3 Kilowatt (PEP) antenna
Tuner. This is probably one of the best pieces of equipment I've ever
owned. I'm moving and won't be able to take it with me (plus I need the

money to pay for the move). It's it great condition.

Make an offer. Amateur Electronic Supply
(http://www.aesham.com/mfj.shtml) lists this item for $299.95, what's
YOUR price?

Please respond via email only.

: KD4QCX
I recently had my 930 RF stage replaced. Ouch.

The dealer I sent it thru told me that Kenwood is no
longer accepting 930s for repair if that repair involves
the Phase Locked Loop assembly.

Subject: FS: TS-440/SAT + MUCH MORE!!

Hello All;
I am selling the Kenwood TS-440SAT with the optional PS-50 power
supply and optional Kenwood MC-60 amplified desk mic. All has less
then 5hours of use. I'm the 2nd owner. The 1st owner purchased this
unit not knowing about his qth's restrictions on no outside antenna
laws. Both of us are non-smokers..
Also all original paperwork, cartons, user's manual, covers
for the 440 & PS-50 & optional service manual are included. I have
the MFJ-1272BX tnc-microphone switchbox also if interested..
Asking $750 for TS-440/SAT with both manuals, paperwork
cover & original carton. This unit has the auto
antenna tuner, been modified for "MARS" and the
optional 7 digit LED read out. Has 100 memories
plus much more.. We detail if interested
Asking $175 for PS-50 with cover and original carton
Asking $85 for Kenwood MC-60 desk mike
Asking $970.00 + shipping. For all the above Or Best Offer.
This is a must see hf setup and I would prefer any potential buyer
to see all the above before buying.. This is One Great Setup..
Reason for selling is strictly financial. Please re:me either through
Packet: N2RIF@WM2F.#SNJ.NJ.USA.NA
Or Better
Email: n2rif@amsat.org
My phone# is: (609) 386-9382 but sorry it is busy most of the time.
You can try though anytime from 10am to 10pm ET..
Thank you for reading my sale's bulletin.

Subject: FS Teflon hookup wire

BUILD SOMETHING!!!

Silver plated- stranded 22 and 24 AWG teflon insulated hookup wire
assortments.

five rolls 50 feet each (250' total) in five different colors.

this wire is used in military contracts due to its high quality,
durability and overall high reliability. it is rated at 200dC /600V

It solders *very* nicely and it will not melt under ordinary soldering
conditions. (unlike cheaper grades of wire)

the 250' assortment pack is $15 plus $3 for priority 2 day mail in USA

If interested contact me by Email to reserve a pack.

Jim (N2GO)

Subject: Icom IC-756 vs. Yaesu FT-920

Bob,

I just recently purchased a FT-920 and have been very pleased with the performance of the transceiver.. So far it has done everything that Yaesu says, while not having a IC756 to directly compare to side by side, the 920 does seem to have a very good receiver and lots of features to keep one fully employed configuring and operating the radio. My previous radio was a 25 year old pair of Drakes (R4B, T4XB) while they had been great radios, the technology had far outrun their usefullness in today's crowded bands. I particularly like the tunable DSP and the tunable notch filter. I also have the narrow CW (500hz) filter, and awaiting the FM module (backordered).

My biggest reason for the purchase of the 920 over the 756 was that I thought the display of the 756 looked too confusing and not as straight forward (maybe due to past experience) as the 920.. While I'm sure that one can get very proficient operating the 756, I tend to not operate for months at a time, did feel like going thru retraining everytime I sat down for a short QSO.

So far I'm very happy, which is good, cause I may have this radio for atleast 20 years.

Good luck,
73's
Dudley Hurry

HI Jack, AS I sit here listening to my Icom 756, which KILLS the 990
Yaesu and DSP 599 built in the speaker, Im thinkin, how could the 920
Stand up. Its not 990!! So, theres my 2 cents. I even had a JRC JST
245 that this ICOM beats, and Kenwood 940 , which with NIR 12 was as
close as anything including 950SD. I love it and consider it very much
a bargain. Spectrum display is very nice to casually watch as you
moniter the band or set the squelch and just glance over to see it 6 is
op[en while you do your email. I gave 2k for mine about 3months ago,
at the first price drop, now I hear some 1899s etc. I say get one!!
Thats all. BTW Iam 55 years old, been a ham only 2 and half years.

Have good toy budget but not wealthy at all. Both wife and I work,. A reply would be interesting. Let me know what you do, CUL 73 Murray

That's a pretty thorough job you did! It's a common problem - I had it
too - and is due to poor grounding on the AF board whoich also carries
the main voltage regulators for the whole rig. The Kenwood recommended
solution is to insert extra-vicious star washers under each of the
ground pillars.

Some people suggest a separate ground lug to a new hole in the chassis,
but the simple solution worked for me.

You can certainly find out more about this and other modifications by
searching both the Web and Usenet for "TS-830".

From: Richard Singles <packrats@netnet.net>
Subject: TH--75A Display Illumnination

Hello,

Does anyone out there know of a way to get the display lamp (LED?) in
my Kenwood TH-75A HT to stay on all the time. As it is, it will only
stay on for about 10 seconds after the last key/button is pressed.

I'd love to use this radio in a dimly lit (or dark) car, and
fumbling for the momentary contact light switch is something I'd
like to leave behind.

I have heard that a number of HTs have a neat trick built-in: If you
hold down the FUNCTION button and press the light button, the lamp
stays on. It's too bad this doesn't work for the TH-75A.

Subject: Tube Stereo Units

HI
I would like some information on a Channel Master combo. Both are all tubes units. The AM/FM receiver is a Channel Master Model 6612 and the Amp is Channel Master Model 6601. There are (4) 6BQ5 for the output. It is most likely a 25 Watt unit. I have the following Questions:

1) One of the 6BQ5 gets extremely hot and glows a bright red. Any Ideas on what could cause that?

2) Anyone have a schemetic or any info on both units?

3) What are their approx. values?

4) If interested, make me an offer or will trade for other Radio, Scanner or computer stuff.

Thanks

Well, I called Yeasu and they referred me to a company called RT Systems
(205-880-3093). I called them up last week and they quoted a price of
$8.00 or so (+SH) for jack plus tinned pigtail. Mine are still "in the
mail" so I can't tell you much else. Not the cheapest, but I could not
find it in any of my standard electronic part sources. By the time you
get past minimum orders etc, it is not likely that I would have saved more
than a few more bucks in the best case, anyway.

> of course?

Nope.

> How is it on charging NiMH battery packs?

This I can help you with.

I have been using the NC-50 to charge a Maha MH-FNB-38 NiMH battery pack, and it works fine. The battery had a "break in" period, during which the charger would switch to trickle too early, resulting in a partial charge. When that happened, I (on advice from Maha) re-inserted the battery into the charger to kick it into rapid mode again. After 2 short rapid charges and some trickle, tha pack was up to almost normal. I carefully monitored the pack during this procedure, and it never got past about 30 deg C. After repeating the 2-charge procedure for about the first 5 pack cycles, the pack broke in and now charges just like my Yaesu factory NiCd.

Good luck.

Subject: Yaesu VX-1R Scanning?? 1 band...

Yep Only one band at a time. But you can do a "Dual Band Watch". Which means that it will only watch one channel. The memory is configured like Yaesu didn't know what they were doing! It has two groups of memory that you can switch between by turning off the radio and turning it back on holding the M/V and the AR key. The first group holds 52 memories that is used for 8 of the 9 bands (BC Band has it's own 10 channels). You also have 10 scan edges and a home channel per band (except BC Band).
In the second group you have 142 memories BUT they will not write the PL tone into a channel!!!

Subject: Yaesu VX-1R Software

Phil,
Tried to reach you at home, your line is busy on the
internet.
About the new VX-1R , what is the RX range on it and
comparing it to the FT-50R how does it hear out of band,
any intermod??
Interested in hearing more about it. When I see the FT-5OR
fo $320
and compare it to the $300 VX1-R, you get more Pout, and other
stuff, how do you like it, and what is the different battery
capacities.
Does a higher amperage battery make it thicker or longer, or
is there only one battery type.

Can I use my same quick charger
NC-50, and use a different insertable sleave??

Mike

Hi again, Dick.

I have both of the Yaesu models. I rarely use the FT-51R anymore, and almost ready to sell the beast. The FT-51R is a true dual band radio, with essentially two tranceivers built in one HT. It does not have 800 Mhz (at least the US version), and it does not have DCS. Many commercial services are going to DCS(digital coded squelch). The true dual band feature is good if you wish to continuously monitor two frequencies. I found it to be a pain, as when you are transmitting on one band, you may receive another signal on the other band, kind of throwing you off from your concentration. You can auto mute the other band or decrease the volume, though. In reality, I never use the unit to monitor more than one frequency at a time.

The FT-50R is less expensive and very versatile, It does have DCS and despite some limitations, is a very good scanner. It has 800/900 Mhz as well. You can only monitor one band at a time, but you can use its priority feature to check another frequency intermittently. It has 5 scan ranges. The wide band FM reception is terrible and unusable for the most part. This is my preferred HT, and it accompanies me on trips! For a full rundown on the unit, and mods (especially the super-awsome mod) check out this URL:

http://members.gnn.com/hca/ft50/index.htm

Unless dual band receive is important to you, I would definitely place the FT-50R above the FT-51R. It is a good (not excellent) scanner and

an excellent ham HT. If you have to bring one unit with you on trips, you can use this one for all your needs.

I also have the new VX-1R mini dual band handheld, which is impressive in it's own right (no, I don't own stock in Yaesu) but will not completely replace the FT-50R. They did fix the FM-Wide reception, but the radio is relatively deaf in the 800/900 Mhz region.

As far as accessories, the FT-51R has a neat microphone that displays the operating frequency. That is an excellent feature. The FT-50R has a miniature plug with 4 conductors. You can get a lapel mic/speaker or an earphone/ptt/mic combo for the HT. You can also use these on the VX-1R.
Programming software (ADMS) is available for both the FT-51R and the FT-50R, and it is a windows program. It comes with a computer interface. It was originally developed by RT systems in Alabama.

The fast charger for both is the NC-50. You buy separate inserts for each Yaesu handheld you use, Two inserts come in each package, so if you have only one handheld, you can charge a spare battery pack also. I use mine for both the FT-51R and the FT-50R.

Battery packs are plentiful for both. For the FT-50R, MAHA has a NiMH 9.6 V/900 mAH battery pack (high power) and a 7.2 V/1800 mAH battery pack. There is a good selection of NiCds from Yaesu and other distributors as well.

I have found the Yaesu radios to be very intuitive to use. I have a Kenwood mobile rig, and I need to keep the manual in the car. I also had an ICOM handheld, and had to keep the manual close as well.

Hope this helps, and not too long-winded. All comments are IMHO!

Hmm, mine must be ancient then, it comes up as A102.

Anyone have any idea how to upgrade the rom/eprom/flash/whatever in
this Vx-1R?

Thanks

You have a problem that is wide spread in FT50s. It is a real shame that Yaesu still sells this defective radio and pretends it isn't there. You can return it to Yaesu, they will stick some copper tape over the power modulke and send it back. Chances are it won't be fixed.

Kind of like advertising the VX-1R with 290 memories, not really true, but it seems to be part of Yaesu's marketing strategy, "maybe nobody will notice".

Good Luck!

...snip...
> I particularly like the tunable DSP and the tunable notch filter. I also
> have the narrow CW (500hz) filter, and awaiting the FM module
> (backordered).

Sorry that you had to pay extra money to get FM. I really do not have
a good feeling for how useful (frequently I'd use) FM on HF. Probably
only on 6m and maybe 10m and I think the yaesu idea of FM being extra
is a good one if the price came down in response. It appears, however,
that the rig is still priced high (like the Icom) and only goes higher.
I think the noise reduction DSP processing on the 756 works extremely
well. This is a feature I use ALL the time. The dual pass band tuning
is another which I use all the time. I wonder why anyone would buy
the expensive, traditional plug-in filters.

>
> My biggest reason for the purchase of the 920 over the 756 was that I
> thought the display of the 756 looked too confusing and not as straight
> forward (maybe due to past experience) as the 920.. While I'm sure that

OH, NO! The display, menu system and general layout of the knobs and
buttons is very straight forward on the 756 and easy to use (notice I
did not say learn). If you know anything about modern (post 1970's)
radios, you should be able to figure things out in very short order just
by looking at the front panel - without the manual.

> one can get very proficient operating the 756, I tend to not operate for

>de Conard WS4S
>ws4s@infoave.net

Look to Communications Specialists in Orange, CA for a tone encoder
module. As for tome on FM, the 251A likely has a voltage supply
labeled like FM8 which is 8 volts only when in FM mode. Hook either
the tone encoder power line or if there is an enabling line to the
source. Now the encoder will be active only when in FM mode.

<< I wonder why anyone would buy
the expensive, traditional plug-in filters.>>

Because you want to get selectivity (filtering) as close to the RF input stage of the receiver as possible. Using DSP and audio filtering is TOO LATE when it comes to use selectivity on band with strong adjacent signals. They cause "pumping" of AGC circuit, intermods, etc. making it nearly impossible to copy weak signal next to strong one.

Source record: 170754

Thought I would throw in my 2 cents on the Icom IC-756 vs. Yaesu FT-920 debate. I recently bought a FT-920 (only had it a little over a week) and so far I love it. I live in an area with alot of powerline noise. The noise blanker on the 920 is great. Takes out almost all of my powerline noise. I can't comment on the IC-756 since I have never used one. There is a good review on the FT-920 at:

http://user.itl.net/~equinox/ft920.html

The author of the article did state that he thought the noise reduction system on the FT-920 was better than the IC-756. Most of the article talks about the 6 meter operation of the radio.

I called RT Systems, the authors of the package, at (205)880-3093. Rod says that the interface is proprietary (I wanted to write a Mac version) and their special interface cable is actually an active circuit that needs voltage from the PC to run. He was very helpful suggesting how to get it running on my Mac. SoftWindows or other emulator and an adaptor cable with 9v going to pins 7/8 with ground on 5 of their DB-9 (but don't let these voltages go back to the Mac).

>UPS doesn't help matters. as far as I'm concerned they are AIDING AND
>ABETTING crime via mail. The only thing they'll do is send them back, then
>he'd have the tables AND the money. They allowed him to ship these even
>though the box is falling apart.

UPS WILL NOT accept an improperly packaged shipment. That is the
reason they are now OPENING PACKAGES prior to accepting them.

By the way, khammond@mindspring.com is no longer a working address,
like
>all good slime balls, Mr. Hammond has disappeared.

Really? I'm ready, willing, and able to accept any TRUTH that you
may have to say, Mr. Nelson. My e-mail address is, as always
khammond@mindspring.com. Are you fully capable of properly entering
this address into your keyboard? Something must have been wrong with
your vision on the day that you reported the disappearance of this
"slimeball".
By the way, UPS will have an inspector contact you on July 10 or 11
in order to inspect the package and compare notes with the shipper who
was on duty (and helped package the turntables) on this end.
And, as I had originally offered to simply re-imburse you (in full,
plus shipping) , after reading this post, I'm afraid that I must
retract that offer. I thought that it was more than fair, but,
apparently, you didn't. Also, as these items are currently selling for
around $749.00 each, and (upon leaving here) were in need of nothing
more than soap and water, what did you expect for 26% of the fair
market value? Brand new? You were made aware that they had been in
storage for the past 3 years and were in need of cleaning. But,
wouldn't common sense tell you that, if there were a hole in the box
and one of the turntables were "hanging partially out of the box", as
you told me, that this would allow smaller parts to fall out? UPS WILL
NOT ACCEPT A PACKAGE FOR SHIPMENT IN THIS CONDITION! And, you will
recall, the day BEFORE you accepted delivery, you had notified me that
the package looked "beat up" and I advised you against accepting it.
Do I need to re-print the e-mail exchange?
Also, if he has the nerve to say so, the previous complaint which
you read on this newsgroup should have been rectified by now. UPS says
that his address has been CORRECTED and the package is being delivered
even now. But, I would like to thank you for "jumping on the
bandwagon.
Please let me know what UPS says and, regardles, upon your posting

of an admission that this post was in error, I shall work with them in helping you out. However, I REFUSE to be publicly humiliated due to UPS errors.
Well, that, and the "slimeball has dissappeared" thing. If I were attempting to dissappear, I would not post my address and telephone numbers.

MINT CONDITION - each comes with antenna & battery -- $450.00ea/incl shipping

I have aproximately 25 Motorola HT-600 portables available for immediate sale.
These HT's are 5 Watt, 6 channel, 157-174 Mhz. bandsplit. I will have them
programmed to your frequencies and PL's as you specify. I also
have a few speaker/mics, six-bank chargers, some single rapid
chargers, and a few other accessories for these radios. I will sell
these accessories with purchase of radios only! Radios
are all in excellent condition, and come complete with
battery, antenna, and belt clip or drop-in holster. Price is
$325.00 each plus shipping. Please Email me for quantity pricing.

CQ Magazine - August 1995 issue - $2.50 including shipping
CQ Magazine - Sept. 1995 issue - $2.50 including shipping
73 Magazine - Oct. 1996 issue - $2.50 including shipping

To purchase any of the above, leave message here or send Internet
Email and mail check or money order to me:

921. Re: IC-706 Serial Data Format?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: dubner@spk.hp.com
Message-ID: <5q377m$pua@hpcvsnz.cv.hp.com>
Source record: 170764

Thanks to K7YJ, N2ZZ, and N6MZV for the replies via E-mail. This information is from Bob, N6MZV. (I've intentionally omitted his E-mail address.)

Bob says:

It's ttl level 8n1 data - you can set the baud rate, or let the 706 go autobaud. If you're only talking from one radio to one computer, you can use a single MAX232 to do the level shifting to true RS232 levels (you can get away with a single transistor and a couple resistors and diodes if you don't want true RS232 levels, but I find the MAX232 route more reliable).

The Icom box is expensive because the interface is actually a party line (open collector) design that allows multiple radios to sit on the same serial bus, and even to control each other. I believe the box also provides optical isolation which is about the best way to reduce RF problems.

As to actual data format, the 706 manual sort of describes it- except that the frequency data is in BCD and is sent ass backwards least significant byte first.

The way I figured out what my 706 was doing was to set the serial speed to a known baud rate and hook up a serial monitor. With the 706 Mk II at least, every time you change frequency it spits out update information on the serial port.

[end of Bob's message]

So I still can't understand the high prices (well, I can, really, but I don't like them :-) but I can certainly homebrew myself a TTL-to-RS232 level translator.

73,
Joe, K7JD

924. Ten Tec 2m kit No. 1220 - L14 notes

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: dpt@super.zippo.com
Message-ID: <33c50947.3085259@snews.zippo.com>
Source record: 170767
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

These notes are regarding Phase 2.0 of assembly and testing. These are my notes, based on my experience and a brief talk with Ten Tec. Steps referred to are in the manual I got which doesn't seem to have a revision, but the part number is 74320 and the PROM version in the kit was 2.1.

Before installing L14 (step 2-2) be sure you turn the slug all the way up and down the coil. My slug got stuck part way down and I had to remove the coil and drill it out. Resoldering the coil back into the curcuit is difficult if you cut the leads as short as they suggest.

It is my guess that my coil was wound too tight and was compressing the tube. Of course, I was only 1/4 turn or so from having it adjusted when it stuck.

In step 2-77 it refers to the voltage dropping when adjusting L14. This is not always the case. My voltage _increased_ to the proper level when adjusting L14 as described. The guy at Ten Tec must have known about this because he was able to guess my initial reading within .02 volts. He also said this is of no concern, so long as the voltage levels work as described in step 2-78.

On a more positive note... Ten Tec is sending me a new coil and slug. I was able to talk with someone who knew about this without wating on hold. The manual is excellent, while no manual can cover everything you can do wrong, this one actually stopped me from putting in the wrong part twice already. The hardware is all high quality.

> Is there something known as TS430 by Kenwood?
> My brother just bought a boat with a Kenwood 430 listed on inventory.

The TS-430 is a High Frequency amateur radio transceiver. With a suitable antenna, that radio will allow contact with other amateurs world wide. An amateur radio license is required to operate the radio; you earn such a license by passing a test on radio theory, regulations, and procedures, and in most cases morse code.

926. Re: WarningII: Terry Keith Hammand DISHONEST LYING BASTARD

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: khammond@mindspring.com
Message-ID: <5q3bcd$vkf@camel12.mindspring.com>
Source record: 170769
Cross-posted to: alt.radio.broadcasting,alt.radio.pirate,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap,rec.radio.amateur,rec.radio.cb,alt.law-enforcement

However, this "dishonest, lying bastard" did find the typo in my signature file. You'll note that it has been edited to reflect my true and accurate telephone number. Had someone pointed it out, this could've been done sooner. (I very seldom read my own postings AFTER the signature is automatically added on the way out.
BTW, here is (quoted) EXACTLY what I advised Mr. Nelson to do upon his informing me of the condition of the package:

"If it looks to have been damaged, just refuse it and
I'll take the loss. I kind of miss them already, anyway. I would sincerely expect this of UPS. I have had bad feelings about trusting them to handle my turntables from the beginning, but we sometimes must learn these things the hard way.
But, please let me know what you decide to do so I know whether or not to anticipate their return. I'm sure that, whatever has happened, I can repair them (hopefully)."

AFTER this warning, Mr. Nelson still accepted the equipment, claiming that "there was a hole in the box that was so big thatr one of the turntables was hanging out through it."

Knowing the nature of turntables, I would've never accepted this package! But, I still offered to either replace them or reimburse Mr. Clark. I really did not want to sell my turntable for 26% of their replacement cost anyway. In fact, I took my time shipping them in hopes that he would change his mind and decide that he didn't want them. I also wanted to ship them in special wooden crates (designed for the turntables) but, this would've cost as much as the total sale price and, upon receiving Mr. Clark's approval (he wanted to keep costs down) I shipped them in a reinforced cardboard box containing $18 worth of styrofoam "peanuts" and cardboard seperating posts to keep one turntable from damaging the other. (This is the SAME packaging arrrangement used when I originally purchased these items.)
Can anyone tell me what happens to cardboard seperating posts when a package is ruptured do to improper handling in shipping? They shift.
How about the styrofoam "peanuts"? They spill.
Mr. Nelson should have NEVER accepted this package. That was my advice to him the day BEFORE he did accept it. I am still willing to either replace or repair the turntables or reimburse Mr. Nelson, but (in all honesty) after reading his post, my interest in helping him out has deminished greatly. I guess we need to see what UPS says now (as opposed to "flying off the handle" and making unfounded allegations). I wil only say this as an example, but for all I know,

Mr. Nelson is looking for an easy way out of a deal or hoping to get reimbursed and to keep the equipment as well. (See! It's easy to say something like that, but it's not neccessarily true.) I only wish that Mr. Nelson had contacted either UPS or myself BEFORE his wild "Dishonest, Lying Bastard" posting was considered. In fact, had I read this post yesterday, I would've never offered to completely reimburse Mr. Clark (shipping included) and send the money UP FRONT (allowing him to keep the equipment until his money was IN HIS HAND. Ordinarily, I would feel really bad about this. I still feel bad (for the turntables). But, after reading this post, my feelings for Mr. Clark are something along the lines of "OK, I'll do what I can to make UPS make it good, but UPS did it, UPS will pay for it." This is totally opposite my original feelings. And, Mr. Nelson, you can thank your erronious post for this change of heart. Or, I feel (so to speak) that, if you're going to suffer the consequences of robbing a bank, then, by all means, go and rob a bank! I would not do this, but you really hould contact people with your problems before spreading such "trash" about in public. BUT, I did see that you FORGOT to mention the fact that I had told you NOT to accept this package the day before you accepted it!
Any comments or questions are welcomed and, CONTRARY TO MR. NELSON'S CLAIMS THAT:

"By the way, khammond@mindspring.com is no longer a working address, like
all good slime balls, Mr. Hammond has disappeared."

my e-mail address stands, as always, at khammond@mindspring.com

If anyone should have trouble contacting me here, please let me know.

Hello All;
I'm selling a brand new still in the box Yaesu G-800S rotor,
control box & connected rotor wire. Also included is the Yaesu
Warranty registration.
Braking torque:289ft-lbs, Rotation torque:43.5-79.5ft-lbs, Max
Vertical load: 440lbs, Wind load area:Tower/mount less .45m2 &
Mast/mount less 2.2m2 Mast Diameter 1-2inches, Rotation range
450degrees +0/5. Other details will be detailed via telephone.
Reason 4sale is: I'm using an az/el rotor for satellite work.
New it costs $389.00 I'm asking $325 shipped OBO
All cash offers will be considered..
Please call 1-609-386-9382 10am to 10pm Eastern Time..

929. FT50-R VOX Recommendations??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: tnic@IDT.NET
Message-ID: <5q3ep8$edo@nnrp3.farm.idt.net>
Source record: 170772

I could use a VOX set up for my FT-50R. I tried the NIMA VOX mike and did not like it.

Yaesu makes the VC-22 Headset which has an over the head wire big ear pad and mike boom. It looks to me like this is a bit larger than it needs be.

Anyone know of a simple ear bud with a mike boom thats VOX and small?

It makes no sense to me to have a small radio and a big headset.

PS: The Yaesu connector for the FT-50is a single jack affair rather than the dual prong like most radios. I would prefer the single jack to an adapter gizmo.

Thanks & 73

Source record: 170773

I am evaluating a used FT-1000 which was new in Jan 1993. This is a very nice rig but has one problem. The cooling fan noise is very annoying. When the fan comes on the rig sounds like it is groaning and it is quite loud.

Is this a common problem? Is there a common fix? If the original fan cannot be quieted I'm hoping there is a quiet replacement fan available.

Thanks.

From: Steve <kc0uh@pcisys.net>
Message-ID: <01bc8d68$595fd860$49f7cccf@none>
Source record: 170776

I was just sitting here poundering the troubles of the world and found myself
looking at my low pass filter and wondered if it was installed correctly to be
most effective. Would you place the filter between the radio and the amp
or would you place it after the amp. All the books I have here in the station
recommend doing one of the two ways but never explains why one is better
then the other. Also would an external ground connected to the outer case
of the filter be of any help. I hope to get lots of good advice on this one so
thanks in advance.

On that note, anybody use a power booster such as a Mirage (I think) BD-35 dual band for about $180, or the Radio Shack amp for $70 for 2M only to boost their HT instead of replace/supplant it with a mobile. I'm trying to decide which to do when I want more power than my FT-50 HT can deliver. The HT would then become a mike. But a used dual band mobile can often be had for $250-300, or a 2M only for about half that. Any thoughts on either configuration welcome.

There is a tiny circuit board with some SOT transistors and other parts, I was going to do the same thing, but it is not simply a matter of using a stereo headpone plug on one end and a DB-9 on the other as I had hoped. I think these parts shift the level from capacitively coupled audio to RS-232.

These teeny weeny antennas have a specialized role....like being able
to put your HT in your pocket without the antenna poking in your eye.
But in terms of gain, they are primarily of use in short range
communication. Good for putting your HT in your pocket to keep track
of friends at a hamfest, for example, or if you are within line of
sight of a repeater.

If you want to improve the gain over the stock rubber duck, consider
the Comet SMA-3. It is 9.75" long and has tri-band capability
(144-220-440 Mhz). I am able to hit the Mt. Greylock (MA) 2 meter
repeater from approx. 65 miles away from an indoor location at the
full 5 watts output of the FT-50R

Enjoy yourself,
Ray K1XV

946. Fixing a HTX-202...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: Ray Brown <r_brown@getonthe.net>
Message-ID: <01bc8cd1$f4550f80$b9af32cf@r_brown.getonthe.net>
Source record: 170812

Okay, okay. No flames, please! :-) But my 202 apparently lost its' final output transistor. Tried ohm'ing it, appears to be shorted. (sigh) And can't cross-refer it to an exact replacement, either. (louder sigh)

Does anyone here know of the replacement transistor for a (trying to remember) C1971 ? It's a TO-220 case.

In Email, please, to r_brown@getonthe.net . Thanks!

Ray KB0STN

Not to worry! This is a common and well documented problem with the TS-830.

Go to: http://www.qrz.com Click on "Radio Mods." Then scroll down and click on TS-830 for the Kenwood
Service bulletin on this subject.

Basically, the rig uses self tapping screws to attach the aluminum heat sink to the AF board. You need to add
tooth washers between the board and the heat sink on each screw to improve the grounding. You should also
install a solder lug to the board and run a wire from it to chassis ground.

I had the same problem with my TS-830 and the above "fix" has permanently cured the problem.

I also had the problem with the display blanking out. Cleaning the connector from the VFO to the board cured
that one.

Good luck and keep that 830 going. It is a great rig!

I would go with the Yaesu, It just depends if you need a dual band or only 2meters. I personally would try a mobile radio with a power supply. You will really get out compared to a HT. I am a fairly new ham and I went witht the HT first and now it is stuck in a box and I have 2 mobiles. One of them is a Yeasu, and I have been very satisfied.

Good luck

> Yaesu FT-50RD
> ICOM W32A

I have used both the FT-50 and the FT-51, and my vote goes to the
FT-51 for the following reasons. First, it offers full dual receive
capability (V+V, V+U, U+U). Second, the alphanumeric capabilities are
superior. Frequencies can be identified by 8 character names (not 4 as
in the FT-50), and the names are displayed along WITH the frequency
information, not instead of it. The advantages of the FT-50 include
wider receive coverage, and probably more ruggedness.

regards, Don (KE4KYO)

If it's marked "C1971", it's a 2SC1971 ... the Japanese
leave off the first two digits of most of their markings on
transistors.

Good luck!

From: Harry Lythall <stop@spam.forever>
Message-ID: <33C4F46A.172F@spam.forever>
Source record: 170824

Hi all,

My homepage is getting bigger and will continue to do so until Telenordia tell me I have run out of disk space on the server. I am currently building an HF bands general coverage receiver using valves. When I can get a 'round-twit' I will be posting this as well as the others listed below. I will present it in several logical stages, each of which is a complete project in its own right.

You can find my homepage at:

http://user.tninet.se/~acz732k/

I make no apologies for the NO.ONE@NO.NAME address. My address is freely available on my homepage - I just don't want all the adverts and junk mail that goes with a correct address.

Amongst my constructional projects are:

BASIC INFO FOR BEGINNERS
How to solder
Component identification
tools

ANTENNAS
Remote tuning of tuneable antennas
Basic dipole information
Short antennas for the HF bands
A balcony/terrace antenna (worked JA on it)
Packing crate antenna
Frame antenna

RECEIVERS
Cigar box HF receiver - uses battery valves
IC HF receiver
HF direct conversion receiver
Regenerative HF receiver
HF and VHF receiver using ZN414 (ZN416)
Modifying domestic receivers for HF SSB
Modifying domestic receiver for 160 meters
Synthesized receiver

TRANSMITTERS
FM (88+108MHz) 'BUG' (can be modified for 30 MHz)
250mW HF bands CW TX
4 watt PA for 250mW HF bands CW TX

5 watt CW IC TX
CW TX using voltage regulator
Single valve TX
Two valve TX
Cigar box transmitter (valve)
145MHz FM TX
QRP SSB TX
3 watt linear 1 - 30 MHz
Phasing method SSB exciter
500 watt linear amplifier
April 1st transmitter

USEFUL
VHF NBFM Crystal RX based on a coffee tin
250vDC for valves using modern components
Stereo enhancement for HF CW
CW filters
Self tuning CW filter
Q-multiplier
CW keyer using 'relay logic'

DATA/INFORMATION
QRP frequencies
Measuring micropowers
Making PCBs, several methods
G0TLAs QRP circuit database on packet
Coil winding and 'turns' calculation.

DOWNLOADING
Signal generator program
All my QRP@WW circuits in a ZIP file
PCB foil for BUG TX (later version)
'Adult' screen saver

BREWING BOOZE
Brewing beer, wine and 'mash'
Distilling the mash (3 methods)
Making liquours

---------- and more ----------

I will be adding more to the homepage constantly, as long as
I have the time available to do it.

Have fun with QRP (and QRO) de Harry, SM0VPO, Upplands V=E4sby.

You probably have poor shielding on your cable to the radio. Go to
the rat shack and get the double-shielded data/audio cable (rs part #:
278-0777). My Ft-50 works fine with the BP-2.

965. FT 50R TX Noise in UHF and no voicemail with FT112

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-10 00:00:00 UTC
From: Morten Kristensen <mk@vingmed.no>
Message-ID: <33C47FED.5350@vingmed.no>
Source record: 170831

Dear all

It is a great radio but I have noise during TX, it is a crackleing sound even when if the radio is laying at the table.

I have a FT 112 keyboard and it's voicemail function does not work. I have read some where that Yaesu don't have any answer to this.

Do anybody know how to deal with this problems.

Thanx
Morten LB3GE

Looking for a used HP 3326A channel synthesizer (a glorified 2-channel, DC-13MHz signal generator). If you have one or know where a "garage researcher" can buy one cheap, please let me know.

Alternate suggestions welcome. I need 2 channels sine wave output, phase adjustable, low voltage, 1MHz max.

Direct e-mail replies are doubly appreciated.

Thanks.

Enjoy,
Dave

From: Phil Wheeler <w7ox@ix20.ix.netcom.com>
Subject: mobile HF antenna advice

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and
a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see
Sept 96 QST for review). One advantage is that it has a tilt-over hinge
at the basew for garaging. Apparently it can be used with a trunk-lip
mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've
used an Outbacker on 20 m and prefer the Hamsticks. And not sure it
will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the
AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

Date: Mon, 07 Jul 1997 20:25:47 -0600
From: wormser@osiris.cso.uiuc.edu
Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

From: rkatz21271@aol.com (RKatz21271)
Subject: What is a good starter 2m/70cm HT? (used or new)

Just getting started and I am curious what would be a good 2m/70cm handheld to purchase. I would prefer to spend around $300 and would not mind getting used hardware.

I've tried to check this newsgroup, and the web, but I'm having a hard time finding anything other than supplier advertising, forsales, or modification info.

Anyone have any input, or websites with critical reviews I could check out?

Thanks for the help!

Date: Mon, 07 Jul 1997 13:25:35 -0700
From: Saar Maoz <NsOmSaPoAzM@us.oracle.com>
Subject: FT-8000 Audio question...

All,

As promised, I am posting the outcome of my FT-8000 repair for audio
problem. Original compaint was:

"NO AUDIO NOW. PREVIOUSLY AUDIO ON UHF SIDE WAS VERY LOW"

in two weeks it came back from Yaesu(via HRO) with this:

"REPLACED R76 TO 27 OHMS
REPAIRED OPEN DC LINE ON RX VCC"

now the radio is BETTER than it was NEW! Both sides are equally loud.

If you have this problem with volume mismatch, I would recommend sending it for a quick repair... I ignored the problem, until one day the audio completely went away, then I had to send it...

good luck to you all.

Saar.

= = = = =

Bob,

Hopefully, you will also get responses from some of the other key collectors
who are more knowledgeable than I am on specific variants. Your key sounds
like a typical "flameproof" / "Navy" key. I have a couple of those in my collection, although at the moment it is boxed up so I am unable to check that number. The flameproof come from the contacts not showing, and the Navy (guess) from the fact that there is a base under the knob.

The other point towards the Navy is the "Contractor Code", which I learned
in the July 1993 issue of the Vail Correspondent was adopted in 1916. The
later codes (ca. WW-II, etc) have the CCC-######-C pattern, with the center
figure often in the 26000 range. CJB is "Contract" Jesse Bunnell, a good
name in the telegraph key business. 26008-A is the more specific model and variations. //I'm wondering if this is "26003-A" with a blurred or misread "3" vs. "8" .....

There are a number of excellent WEB sites that you can find through the various search engines, plus they point to each other. Many have photos.

Try http://fhonix.metronet.com/~nmcewen/ref.html

for a starter, he has links to others. Regards, Dave K7HMP

From: Peter Orban <Peter.Orban@nrc.ca>
Subject: Kenwood CW filter help

I obtained a 455KHz 250Hz bw Kenwood CW filter that I would like to use in a TS 450 transceiver. That radio uses the -1 type filters, the filters are attached to a small pcb for easy installation. I was given a pcb like that, and attached my filter to it. The TS 450 does not recognize my filter. My guess is that some of the pins on the pbc are used for "encoding" the filter type that the radio recognizes.
I am not sure from where my pcb came from (what filter did it have on it before it was given to me), but I would appreciate if someone with factory 250Hz or 500Hz bw 455KHz filter would look at the filter pcb and would give the wiring of the individual pins.

Thank you very much for your help, Peter

From: w6uv@nospam.wco.com (Jerry Gardner)
Subject: New to 6M - Please Recommend Rig

I'm just getting into 6 meters and I'm primarily interested in weak-signal SSB and CW modes.

I'm thinking about getting an Icom IC-706 Mk 2. Is this a reasonable rig for 6M, or would I be better off getting a dedicated 6M-only rig? I don't currently have an HF rig or a multi-mode 2M rig, so a transverter isn't a good option.

Any and all recommendations are welcomed.

Actually, the "F" key must be pressed while entering "#212" with the keypad locked. So

Hmmm, my IC765 does cross band splits just fine, worked many stations on
RS12
using CW with such a split...
When we tried the Yaesu, it *tries* to work, but the dits just don't go!

* Continuation 3 of a split message *

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see Sept 96 QST for review). One advantage is that it has a tilt-over hinge at the basew for garaging. Apparently it can be used with a trunk-lip mount. Downside: a bit pricey and does require a diplexer. OTOH -- I've used an Outbacker on 20 m and prefer the Hamsticks. And not sure it will give your 2 and 6.

I, too, would really like some advice. BTW -- I will use mine with the AT-180 which should add to band coverage range.

Good luck .. and let me know what you decide!

Subject: TS-830 Freq Jump

Any hints on fixing my TS-830S? Here's what it does:
The freq jumps by about 100 Hz around the tuned freq on both receive
and transmit, with heaters on or off. The jumps up & down occur
every 1 to 10 seconds. The problem has "gone away" for a few days
or weeks then returns. When it acts up, it does it all the time.
I notice a crackling noise when the freq jumps.
I have checked the output voltages (9 and 3.7 V) from the AF/AVQ
board, and I have cleaned & re-seated the connectors on the VFO,
AF/AVQ, PLL, and Freq Counter boards. When the freq jumps, the
digital display does NOT blank out (service manual says that if the
PLL board loses its lock, the digital display will blank). I have
cleaned the wiper on the main VFO tuning capacitor. I have listened
to the AF/AVQ, RF, VFO, Counter, PLL, and Rectifier boards with a
stethoscope. I have tried to monitor output from the AF/AVQ & PLL
boards to see if VOM fluctuates. I'm a troubleshooting newbie!

Thanks for any help or ideas.

Phil - Check out the instructions under "Dual Watch" (page 38) in the
owner's manual. Mine was the same way, and somehow I followed these
instructions and got the "Pri" to go to Channel 2 of VHF, but was in the
UHF Ham band when I did it! I followed the instructions blindly and
"moved" the PRI. Try and see if you can too....

Subject: What is a good starter 2m/70cm HT? (used or new)

Just getting started and I am curious what would be a good 2m/70cm handheld to purchase. I would prefer to spend around $300 and would not mind getting used hardware.

I've tried to check this newsgroup, and the web, but I'm having a hard time finding anything other than supplier advertising, forsales, or modification info.

Anyone have any input, or websites with critical reviews I could check out?

Thanks for the help!

Right now, I'd go for 40 metres. Contacts up to 3000km should be quite possible with QRP. Longer distances are very difficult. Thus 40m is better for domestic operation.

Two years time 15 m should be good. International contacts will be much easier on 15m than 40m.

For this period in the sunspot cycle, 40 meters for sure! I've worked Europe in the evening several times running 5 watts on 40 meters using a dipole 55 feet high. DX is possible, you just have to be patient.

From: kn4aq.gary@mms.net (Gary Pearce)
Subject: Icom w32a problem - very poor sensitivity

Hi, John,

Everything you say leads me to the same conclusion - your W32 has a sensitivity problem. My W32 hears everything just as well as all my other receivers.

But to know for sure if you have a problem, you need to test it with a calibrated signal generator (part of a device often called a "service monitor"). In this area, most hamfests have someone set up with a service monitor testing HTs. You could also ask around on local repeaters, and as a last resort, ask at a local 2-way radio shop.

The radio should hear an audible test signal set below .2 microvolts. If the hard evidence proves a problem, you ought to be able to show Icom you need a repair.

Hello!

As title says, I'm working on a Boatanchors page. Please, visit it at:

http://www.geocities.com/SiliconValley/6992/

and add it to your Bookmarks... I'll add information often!.

In my page you can find information about the R-388, R-390A, SP-600 and
some other BAs and also about my radio station. Please, if you visit my
page, send me any comment you have about it. I'll be most grateful.

Thanks and best regards.

From: Josh Pavlovich <jpav@mtnweb.com>
Subject: -FT-50 Case info???

Does anyone have, or know where I could find a picture of the cases for
the FT-50. In particular I am interested in the new leather case
designed for the commercial version, or in the cordura case. The only
place I can find any reference to these is through mail order, and no
one seems to have a picture.

If no picture, can someone who owns one of these describe how it looks.
Do either cover the entire radio? Do they have a clear window to view
through. I really would appreciate any help anyone is able to give.

Thanks much,
Josh Pavlovich

From: Hendrik Susanto <hs036@csufresno.edu>
Subject: Alinco DJS-41(T)

Does anyone know the difference between the Japanese and American version of the DJS-41? My Japanese friend wants to do the extended mod and be able to use it both on the American FRS band and also on the Japanese FRS band which is in the 422 MHz range.
For those who like to know, The Japanese FRS band consists of 9 and/or 11 basic simplex channels plus 9 more for repeater use. Simplex from 422.2 to 422.3 MHz. Power output is usually limited to about 10 mW. This

licence-free band has been in use for many years and is very popular there. There are many repeater clubs across the country.

From: "J. Dirk Bremer" <dirkb@myself.com>
Subject: ICOM/Yaesu Newbie Questions

I am in the process of studying for a Tech license adn want a HT as my
first radio. Form the catalogs and sales literature I have seen, I have
narrowed my choices to the following in order of precedence:

Yaesu FT-51HP
Yaesu FT-50RD
ICOM W32A

I would like some comments on my selections, and particularly on the
features and capablilties of the FT-51 versus the other two.
Recommendations on where to purchase will be welcomed. From what
information I have, prices are comparable for the HTs, it seems there is

some difference on the accessories. I would want a compatible
quick-charger, extra battery, case, programming software, and
microphone. Please advise via email.

Subject: "HELP!!!" Noise in Kenwood TM-631A

I need help on my 2m/220

I run my radio mobile with it connected directly to the battery. I
have owned the radio for about six years now and never had a problem. About
2 months ago I started to lose stored memory. So I changed the lithium
battery. It did not cure the problem, however I ended up with another one.

When I tune the radio on 2m (in main band) to a fixed station (i.e.
NOAA) I get noise in the foreground and I can hear NOAA in the background.
When I do a band band change (220 now in main band and 2m in sub-band) NOAA
signal comes in clear. When I switch back to 2m in main band, everthing works
properly from there on as long as I keep the radio on. When I turn the radio
off, then turn it back on, the same problem occurs. I checked very closely to

the circuit where I soldered the battery to see for any circuit damage had occured or if I lifted any traces. Everything looks fine. In fact changing the battery was a very easy proceedure. I have checked wires and all.

Does anybody have a clue as to the problem? Any response will be appreciated. Please respond to

djeo1@mail.telis.org

Thanks

From: "Jim O'Donnell" <kb8wln@provide.net>
Subject: Crossband repeat

I have a chance to pick up an Alinco dr 590 or a ft 5100 both for a very cheap price. My question is- Do either of these radios have crossband repeater functions? I like the features of the ft 5100 better but I'm mainly looking for the crossband function at this time. Any and all help will be very thankful....

equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

> Why not buy the 8 buck adapter and use a STANDARD BNC antenna????
>
> My 2 cents...
> --
> Bryan ks4hr@injersey.com
>
There a a number of reasons why not to use the adaptor.BTW,mine only cost $5.95,still no bargain,kind of like the replacement antennas...
The reasons...
1.Looks Bad!
2.The SMA antennas have a "shoulder" that prevents the connector from being broken off the radio,and helps prevent stress on the connector.The BNC ducks and whips are pretty heavily built and wouldn't inspire confidence due to excessive bulk.If the radio is dropped,the antenna connector will probably break.....

My Standard C510A will be using some kind of replacement,but the damn things cost way too much.....Barry N8PVX

Use SMA to STANDARD BNC adapter and FT530 antenna, and you have almost
the perfekt match, it seems to me that this is a better combination than
the orginal antenna...

From: "Bob Snyder" <rsnyder@pcisys.net>
Subject: Help Identify This Key.

It's a black military(?) key, large knob about 1" high, larger at the top.
There is a base below the knob that is about 1" round. From the knob. the
lever goes straight back for about 1.5" with a 1/4" rise. Then the lever
becomes horse shoe shaped. In between the horse shoe are the adjustment
screws. Behind that is a black plastic cap that covers the connectors. On
the left hand side is the sequence: CJB26008A

Thanks in advance for any information.

Right now, I'd go for 40 metres. Contacts up to 3000km should be quite possible with QRP. Longer distances are very difficult. Thus 40m is better for domestic operation.

Two years time 15 m should be good. International contacts will be much easier on 15m than 40m.

For this period in the sunspot cycle, 40 meters for sure! I've worked Europe in the evening several times running 5 watts on 40 meters using a dipole 55 feet high. DX is possible, you just have to be patient.

From: kn4aq.gary@mms.net (Gary Pearce)
Subject: Icom w32a problem - very poor sensitivity

Hi, John,

Everything you say leads me to the same conclusion - your W32 has a sensitivity problem. My W32 hears everything just as well as all my other receivers.

But to know for sure if you have a problem, you need to test it with a calibrated signal generator (part of a device often called a "service monitor"). In this area, most hamfests have someone set up with a service monitor testing HTs. You could also ask around on local repeaters, and as a last resort, ask at a local 2-way radio shop.

The radio should hear an audible test signal set below .2 microvolts. If the hard evidence proves a problem, you ought to be able to show Icom you need a repair.

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: Buying and Selling newsgroups

Gary,

Great idea - but lets look at what's really happening here. If there is such a large percentage of such "for sale" posts - maybe the group has changed of it's own volition.

You say "moderating a newsgroup is a Hurculean task" isn't sending copies of a form letter to each errant WTB/T or FS poster about the same idea?

I agree there needs to be SOME sort of structure, but the days of a "self policing" I-net anything are quickly being sun-setted.

I hate to be a "doom-sayer" but the structure and policies of Usenet seem to be swiftly going the same direction as the CB bands. God help us all.

More power to ya Gary - but it may be time to smell the coffee, eh?

Subject: crossband

Hi Jim,
The FT-5100 is capable of full duplex crossband. You can set it so when it receives a signal on one band,it re-transmits it on the other,and vice-versa. No mod is required to do this. It is explained in fair detail in the Yeasu manual. My friend has that rig,and it works great. It also has dual in-band receive for monitoring two 2mter freqs. or two 440 freqs. simult. I have the 8100R and it also has these features,plus ext. rec. I think you will be very happy with it. Hope you get a good deal on the radio
73s Frank WQ1O

Date: Tue, 08 Jul 1997 03:11:15 GMT
From: dddavis@atl.mindspring.com (Donald D. Davis, Jr.)
Subject: crossband

The FT5100 does have crossband repeat with no mod required. I think
this radio is especially good for crossband because you can combine
DTMF code squelch functionality with the crossband function to prevent
accidental triggering by other stations.

best of luck, Don (KE4KYO)

Subject: For Sale: ICOM IC-2KL Solid State Amplifier

For Sale: ICOM AT-500 Automatic Antenna Tuner

This AT-500 is in excellent condition, comes complete
manual and control cable. $375.00 plus shipping.

The ICOM AT-500 fully automatic antenna tuner designed
for short tune-up time. Automatic band switching
(compatible with the IC-2KL solid-state linear
amplifier). Matching circuit can be preset for
each band...160m-10m. Four antenna connections.

Has four coaxial sockets for antennas, and selects
the suitable antenna for each band automatically.
When the tuner switch is turned off, this tuner
can be used as an automatic antenna selector.
All bands are presently connected to single
connector since I was using an antenna switch,
but is easily modified to use all four connectors.
Also has room for a fifth connector if necessary.
Manual clearly shows all modification details.

Can be used with 13.8v DC or 117V/230V AC.

HRO and AES are still selling the AT-500 for $999.95.

4 1/2" h x 9 1/2" w x 12" d

Call me daily up to 10pm PDST at 408-257-5383 or send email

From: jrhodes@iti2.net (John Rhodes)
Subject: Icom w32a problem - very poor sensitivity

I have an Icom w32a that has a problem with terrible receive
sensitivity on the 2 meter band. My Yaesu ft50 can receive a repeater
signal from a repeater that is about 80 miles away with the rubber
ducky antenna. The signal is intermittant on the ducky but when
attached to an outside j-pole, the signal is great. The w32a cannot
even hear the repeater even with the j-pole, which is 20 feet high.

Today we did a different test. My son had the Icom w32a attached to the j-pole at home. I was in the truck with my Kenwood v7a. My output at 10 watts could be heard by him for about 3 miles. At 4 miles, he could not hear me at all but I could hear him (transmitting at 5 watts) clearly. When I went to 50 watts, he could hear me but it was scratchy.

Icom has tested the radio and says it is working according to spec. I think that a receiver should be able to pick up a 50 watt signal with an outside elevated antenna perfectly at a distance much greater than 4 miles.

Has anyone else had this problem? The UHF side does not have this poor sensitivity.

Subject: mobile HF antenna advice

I'm in the same position .. installing a 706MkII in a Honda Civic.

Not real sure what to do abt antenna -- tho I do have a frame mount and
a couple of hamstick-type antennas.

I am considering a Comet CA-HV which covers 2, 6 and two HF bands (see
Sept 96 QST for review). One advantage is that it has a tilt-over hinge
at the basew for garaging. Apparently it can be used with a trunk-lip

> suggestions?

Hi Ron,

Yes, that is the sole complaint I have about my FT-50. I finally enabled a 30 minute APO so I won't be constantly presented with a dead battery every time I take the HT out of my gear bag.
Another option is to keep it a case like "The Pouch". Its made of neoprene and padded fairly well so in addition to protecting your HT, it will prevent all but the most direct pressures from activating the power button.

992. FS U.S. Tower 72 ft crankup and/or pool home in FL

994. FS-FT: Broken ICOM 02-AT For Parts

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-11 00:00:00 UTC
From: Shawnerz@xSprintmail.com
Message-ID: <33c597cd.18952640@nntp.a001.sprintmail.com>
Source record: 170611

I have an Icom 02-AT HT for sale or trade. IT DOES NOT WORK!
Problems:
Volume knob does not turn the power off

The mylar ribbon cable that interconnects the 3 PC boards together is tearing. Because of this, the PTT doesn't work, the keyboard is intermittant. I'm tired of doing repairs and I'm getting dimishing returns.

Included is 2 BP-3 battery packs and 1 (maybe two, I have to check my parts bin) final PA transistors-but NO ANTENNA. I blew a couple out several years ago before I found that you can't transmit in high power with a rubber duck antenna and a speaker mic. It's a long story, but that part is fixed.

Asking price: $40-you ship. I'm not really interested in the money, I'm more interested in what you might have to trade.

Current wants:

2 Network cards (ISA to 10base2 perfered)
220 equipmet
SCSI equipment (cards, cables, whatever-again ISA)
you name it.

I'm looking to purchase some extra equipment for my club's repeater (146.22/82 MHz). Currently, we're running General Electric MASTR (not MASTR II) receiver, transmitter and power supply. I know these items (when made) were circulated heavily, so I'm sure there are some still floating around.

If anyone has any GE MASTR receivers, transmitters, or power supplies, I'm interested in buying a set for backup. All equipment must be in good working condition. VHF Only!!

Please email me directly with any information. Thanks in advance!

1005. IC-2000H memory corruption

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-11 00:00:00 UTC
From: mwilson@flex.net
Message-ID: <5q4207$k2p$2@cub.flex.net>
Source record: 170647

I have programmed several memory channels' information
into this 2m rig, an Icom IC-2000H. Frequency, offset, tone
frequency and mode, alphanumeric channel names. They
are supposed to be stored in nonvolatile memory, and that
appears to be happening OK. But about once a month, the
radio, when you turn it on, flashes ICOM on the display for
a second then turns itself off. The radio manual says when
that happens, it means that the nonvolatile memory has been
corrupted, and gives directions for a master reset of the system.
In every case, this master reset has cleared up the problem but
of course means you must go through all the programming again.

Has anyone experienced similar problems? Please let me know.

.........Monty N5NVM.

I had the same problem. I found that I forgot to shut the radio off when
I tuned on the ignition. Evidently, there is a voltage spike that can
do damage to your radio if you don't have it off when you start your
car.

I have had a FT1-1000 for about 4 years. The fan is very quiet - no
problem at all. If there is a noise as you describe it sounds like
the bearings are going out. Or perhaps it just needs oil/grease.

Call Yaesu and talk to the technicians - they are very helpful. I am
sure they will have a replacement, if that fan is beyond repair.

Good Luck

>-Jim

I tried that *once*. I wasn't very happy. You've got a tangle of wires
to deal with (coax, power, external mike, external speaker, etc), and HT
audio is still inferior to what you get with a mobile. I also didn't like the idea
of constantly connecting and disconnecting the antenna connector on the HT.
Those connectors aren't intended for that, and they wear out quickly. Plus
even a good HT will have a much greater tendency to overload and suffer
IMD than will most mobile rigs. I think it is better to reserve the HT for
HT type things and get a real mobile rig to permanently mount in the
vehicle.

>one so
>thanks in advance.

The place for the low pass filter is at the amplifier output. The amp will always be dirtier than the transceiver. Bond the filter to the amplifier case, and make sure the amplifier is well bonded to station ground. The transceiver needs to be bonded to station ground too, via a separate ground cable, and not daisy chained to ground via the amplifier. Doing the latter can induce RF feedback.

1016. Project for a Summer Camp

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-11 00:00:00 UTC
From: Shad Valley Acadia House 2 <shad_h2@hotmail.com>
Message-ID: <33C646A3.43A4@hotmail.com>

Cross-posted to: alt.home.repair,rec.crafts.metalworking,rec.radio.amateur.equipment,alt.comp.hardware

Hello,

I am a high school student at a business/science camp called Shad Valley (http://www.shad.ca). For this camp, we have to create a new product and write a business plan as if we were to market this in real life. My group has decided to make an attachment for a soldering iron so that solder is applied directly to the hot element of the soldering iron. This would enable the person using the iron to only use one hand to both hold the soldering iron and apply the solder. For our business plan, we need to research what the market for this product might be, and we would like to get a look at what type of people use soldering irons. If you could just take a few seconds to fill out this survey and e-mail it back to us, it would help us greatly with our project.

First we would like to find out a bit about you. If you don't want to answer some of these questions, just skip them.

1) Age:
2) Gender:
3) Income:
4) Occupation:
5) Education:
6) How many soldering irons do you own?
7) What do you use your soldering iron for (hobbies, home maintenance, professional use, etc)?
8) How often do you use your soldering iron?
9) What styles of soldering iron do you have (pen shaped/soldering gun)?
10) Do you know of an existing soldering iron that feeds the solder directly onto the heating element (similar to a glue gun)?
11) How much would you be willing to pay for this attachment?
12) Would you buy this attachment for a reasonable price?

Thank-you for your time. We really appreciate it. Please e-mail this survey to shad_h2@hotmail.com

This won't work! The tone burst is audible and goes through the mic BPF,
low end roll off is around 400Hz, which will almost knock out the PL
completely.

Sorry :-(

Well Mud, it might be a litle easier to know a model number, what he's asking for it, and why he's "eager" to sell it. .Radio Shack makes a decent radio (OK, I know that's gonna get a flame) and I just sent off for my second handheld HTX-202. I like them even though a LOT of hams are very much against the Radio Shack name. I live near Fairbanks, Alaska and when I grab a radio to take with me for safety reasons, I want one that I KNOW will work when I need it too. I can't say that about my old Icom handy. Let us know the model number, etc.. and I'm sure you'll get plenty of advice.
BTW, your post said mobile radio... Is that the 10/35 watt powered radio?

: Can anyone tell me if there is any difference in modifying TH-28a and
: TH-28e? I have read some different opinions about witch diode to remove,
: 8-9 or 10. What is the right one? On the e-model there is a green cabel on
: W1 and W2. What are they doing?
: Because I don't have any manual, can anyone give me a short description on
: the key combinations?

The cables (wires?) exist in the US "a" version. However, there isn't
a diode at 14 or 15. Also, the keys near PTT are PPT, Light, and Monitor.

I understand the "e" version has a "tone" key in replacement. Also,
thought I don't have my stuff with me right now, I believe that the
transmitting range is a little different.

I'll tell you after I get home and read the book.

1030. Re: TS-830 Freq Jump

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-11 00:00:00 UTC
From: wormser@osiris.cso.uiuc.edu
Message-ID: <868652235.11329@dejanews.com>
Source record: 170672

I had a problem with my TS-830S jumping frequency (about 100 Hz at a time)and I got lots of replies when I asked for help. Ham radio is full of a bunch of really great folks - no wonder I love this hobby! For me,cleaning the FIX button worked (yes, the "FIX" button was broken ;-)). I'm posting this to thank everyone, and to help anyone else in the same situation. All the suggestions were excellent. Alan Wormser, N5LF (ex-WB5QLF)

>From Ian G3SEK, Art N2AH, Paul K0PW, Frank KB0ZFN, and many others:

Grounding the AF/AVR board: Connecting a wire from TPG post to ground screw, and inserting star washers between board and heat sink, In accordance with Kenwood bulletin - appeared in QST Hints & Kinks in the mid-1980s.

>From Dale R. Parfitt W4OP

Although I have not seen this problem in a Kenwood, I have seen it in Icom and Yaesu- both with the same cause- small single turn variable caps. In case of the Yaesu it was a frequency netting cap on a heterodyne oscillator- drove me nuts. It occurred randomly and never when I had the rig open. A hint from another ham sent me looking in that direction. Replaced 2 or 3 and that was the end of it. Hope this helps.

>From Brian Sherrod KJ5AG

This is a common problem with the 830. This jack has a contact which is shorted WITHOUT a external VFO. If the contacts get dirty, it will do exactly as you described. You might also want to spray a small amount of contact/electronic solvent on the jack and do the plug in and out as I mentioned before.

>From Dennis Clemenson NT0V

NOTE: This solution is also in the 1997 edition of ARRL's book,"Hints and Kinks" I had what sounds like the same problem with a TS-830S. Turned out the switch labeled "FIX" was intermittent. It is in the path of the voltage to the VFO and if it has some extra resistance, the frequency would change. I tried "Deoxit" and that worked for a while but finally I jumpered around the switch contact since I never used crystals for operating. Try operating the switch many times and see if goes away for a while.

>From John <rtwodtwo@jps.net>

Sounds like one of the xtal trimmer caps is going bad. The center pivot point is getting rusty. Contact cleaner will fix this for a month or so

but you need a new one.

1031. CABLE TV--FREE DECODER PLANS--

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-11 00:00:00 UTC
From: Edward Witt <superted@worldnet.att.net>
Message-ID: <01bc8e48$6ee01520$537074cf@default>
Source record: 170673

Now you can get new plans to build a Cable Descrambler System, US and UK plans.

This is not the origonal Radio Shack plan (now obsolete), but a choice of six new up to date plans designed to work on any cable box in any area. Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area, and you will be able to view all premium and pay per view channels.

It works on all Cable Tv Systems. The parts to make the box cost appoximately $15 (depending on the plan) and you can find them at any local electronic part supplier(US Residents will be supplied with radio shack part numbers). British Sky Cable descrablers cost approx 20 Pounds. Remember this is for educational purposes only, you still have to pay for the channels you view. I have to say that to protect myself for any liablity.

For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7
Hoboken, NJ 07030
USA

The reason I charge two dollars is for the stamp, envelop, and paper your plans are on. I am doing this for you not for me to make money. Lets get real you cant buy much for two bucks. I am not in this for the money but to get back at the cable companys that over charge people.

CABLE HANDBOOK (Additional $2)

Everything you ever wanted to know about cable boxes. Includes a cross reference list for upgrading your box using upgrade converts, cubes, plug-in activators and service code-generators. Also explains general cable operation, this handbook is very COMPLETE, a must have!

TURN ME ON!

Turn on all your premium channels with nothing to buy.

The Notch Filter

A notch filter allows you to selectively descramble channels. For instance, if HBO is on channel 7 and Cinemax is on channel 14 or pay-per-view is on 22, you may build a notch filter to descramble each of those channels. This method is fairly simple to build; However, it requires several more parts than the Fifteen Dollar Box. This system will work on your cable system, no matter what frequency your cable system operates on. A cable box is NOT

REQUIRED, and parts cost in the range of $25-30 depending on how many channels pay channels you wish to descramble. NOTE: I used channel 7,14 and 22 as an example. Your premium services may be on other channels and the notch filter can be built for whatever channel your premium services are on. (between the range of 2-22) Parts can be purchased from a electronics wholesaler/retailer in your phone.

The Gated Sync is the Grand Daddy of descramblers (in band and out band). It can be configured to operate on your cable systems frequency. This system is for the serious home electronics buff. It is a bit more complex to build; However, it sells for a lot of money. And, it will descramble EVERY channel.

SSAVI was created by Zenith, and used by many Zenith converters. The system is very difficult to build, but it will descramble EVERY channel, and also sells for a lot of money. Novices should not attempt to build the SSAVI system.

FREQUENTLY ASKED QUESTIONS

What is a Descrambler?

A descrambler is a device that restores the picture and sound of a scrambled channel. In most cases, ALL channels which are scrambled will be restored.

Are Descramblers legal?

YES! It is legal to build, sell, ship, use, and own a descrambler; However, when you use a descrambler, it is your responsibility to notify the cable company that you are accessing their signal.

Do I need a converter from my cable company?

In most cases NO. A cable ready VCR or TV will work.

Is it difficult to build a descrambler?

Turn me on, the Fifteen Dollar Box, the Oak converter and the Foil method are very simple methods! The instructions provide step by step instructions. No special skill or knowledge are needed. The Notch filter is still fairly simple. The Gated Sync is not for the beginner, it requires electronics knowledge.

Can I build more than one?

YES! You may build as many descramblers as you want! They are legal to sell and demand fairly high prices!

Just send me details of which cable box you have and in what area you reside as the plan needed will vary area to area
For the Plans just send $ 2 or 2 Pounds to:

Ed Hacker
409 Adams Street # 7

Hoboken, NJ 07030

Hello to all.
I'm looking for this little tunable FM transmitter (87-108 MHz)that
was made in the late 1960's by Kinematix, model number "IMP II".
It's 3 x 1-1/8 x 2-3/4 in size.
It's black and has a slide power switch on the front.
A microphone could also be plugged into the top. It was tuned
with a plastic tuning tool. This gem is in the 1967 Lafayette
Radio catalog for $39.95.
Does anyone out there have one of these at the bottom of a draw?
If so, and if it's in working order I'd like to buy it from you.
Let me know how much you want for it.
Please e-mail me direct at: mrusso@hoflink.com
THANKS, Mark N2FLF

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. It should read: mrusso@hoflink.com I'm trying to stop
the unwanted Junk Mail. SORRY for the inconvenience but it's getting
out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

Please forgive me if these are the wrong newsgroups to post to.

I�m currently helping a neurosurgeon to do some research on nerve stimulators to help restore some functions for people paralysed with spinal cord injuries.
So as not having to implant a power source (ie. Batteries) into the human body, we decide to instead use an external transmitter to send signals using an RF carrier (5-20Mhz) to an implanted receiver in the spine (specifically the lower back).
Being trained as a radar technician, I have some ideas of RF propagation with air being a medium. So what are the cionsiderations if the human body is used as a medium? How does the various dfferent tissues of the human body affects it?

You can e-mail me, but I�ll also be checking here frequently for your thoughts/theories.

Thanks in advance for any advice.

If the packaging on a package looks that bad you (Mr. Clark) should have refused delivery, you can do this
rather it is UPS, FedEx, Truck Freight, or just about any other shipping method, you ordered COD, you would
have been out nothing except a little time.

See February, 1993 QST page 37 for a good explanation.
Note that the Figure 2 Icom/Tentec inset is all that is req;uired if the required
RS-232 conversion to 5 volts is done. The Figure 2 circuit should work well.
Alternatively, I have done it with 5 transistors. Some have had good luck with just
2 or 3 transistors but may under drive the RS-232 bus.

Good Luck

Steve Schuck wrote:
>
> Wondering if anyone has come up with mods to open the new VX-1R ?
>
> Thanks
> Steve

The Yaesu VX-1 mods were posted last week by KS4HR(thanks). But since severa; folks have requested them, I we have a couple of out notes to add to them here it is again:

1. remove battery

2. remove 3x philips screws from back of case

3. Carefully lift rear of case off. The edge along the side where the battery goes is held together with 3x hook snaps. reach inside the battery compartment with a small straight blade screwdriver to release the first one or two. Be careful not to loose the battery door hinge pin

4. with the radio laying face down, look in the top left corner, just below the rotary switch, see two open jumper pads. CAREFULLY bridge these two jumpers(separately) with solder

5 reinstall back cover

6 reset CPU per the owner's manual; press and hold the M/V and the AR buttons while turning the radio ON, then press the FW button

radio will now transmit from 137-174 Mhz and 410-470 MHz. to activate tx in the UHF T band)470-512 MHz, set the operating mode to Narrow FM

Oh yeah, this mod also adds 870-894 MHz receive too. Isn't that just special... For those that choose not to do this mod, you can image receive this range by tuning accross 952.9-876.9 MHz

receive sensitivity tests indicate very good sensitivity weel beyond the Ham bands, .3 uV up through 175 MHz and to 512 MHz too 800 MHz sensitivity SUCKS, but is better than stated in the manual, about 2 uV
have fun

Hi, beside the less-than great memory channel access, one problem I have noted when trying to scan the memories, is that is you have a CH setup to decode a CTCSS(PL), the VX-1 will NOT stop on it if a signal WITH the correct subtone comes up on it... Yes I have the scan res set to Carrier Drop. I first noted this when trying to scan a CH that was set up to decode a 74.4 Hz tone. Knowing that some tone decoder designs respond faster to the higher CTCSS freqs, I also tried the same thing using CH requiring a 192.8 Hz tone. No luck. I tried this with both VHF and UHF freqs. I have not checked, using my Ft-50 as a tx source if the same situation exists using DCS codes.

I also looked at the circuitry that does the tone decoding; IC Q2017 the 2904 opamp. I thought that the .033 cap on pin 2 might be slowing down the time it takes for a valid tone decode to happen. I removed to cap,but no luck there. I did verify that this does affect the time it takes to decode a tone by subsituting a much larger cap 5 uf) in there and could notice a much longer delay it took to get the speaker to un-mute.

I now wonder if ther is something in the radio's softwear that intensionally causes it to skip memories that are set for CTCSS decode. The softwear version in my VX-1 is A-102. can someone with a lter version try and see if there radio will correctly scan memories tht decode CTCSS... Atleast when this happens, the radio scans past the memory and it does not hangup on a channel that has an active freq but with a user that does not have the correct subtone...

> The transmitted carrier frequencies are between 1-20 Mhz.

I'm not sure what you mean "putting it thru' a metal bowl", but
if you are simply referring to a parabolic reflector, the material
won't be a problem at those frequencies. In fact, you could use
chicken wire just fine. The real problem is going to be size.
A typical parabolic reflector is on the order of wavelengths in
diameter. Even at 20 MHz, you would want a "bowl" that was 10 to
20 meters or more in diameter. Are you serious about building
such a device?

What exactly is it you are trying to accomplish? Simply to
get directivity, at those frequencies an antenna with parasitic
elements and a reflector such as a Yagi or Quad antenna would
be much more practical.

>has to post before this group speaks Up?

Look at little jimmy. See jimmy be scared! Every post he makes now, he trys to comply to the letter of "the rules" vis-a-vis he has a radio for sale. Little jimmy used to analyze people's "balls" for that sort of behavior before. But the big bully is crying to mommy (the ISPs) that he is being picked on because he's pretty worried that all of the threats he has made in the past will come back to haunt him. But they were all OK because he was being "picked on." This is a third grade bully-on-the-playground mentality at work here!

And jimmy - let me clue you in on something: the reason "the group" isn't speaking up is that NO ONE HERE LIKES YOU. In fact, their dislike of you is palpable.

A most excellent post, Glen. One thing I might humbly add is while Mr. O'Brian keeps referring to some of us as "anon spammers," the correct terminology for me would be a "troll." And, while Mr. O'Brian is certainly enamored of the term, my posts are certainly not "spam." I have on occasion heard such posts referred to ingloriously as "troll droppings."

I most heartily applaude your dedication, Glen, to assuring the terminology on usenet groups be as correct as possible to ensure at least a modicum of civility.

And to little jimmy: the reason there is no big movement in "the group" to come protect and defend you is simple: NO ONE LIKES YOU.

There is a radio called "Freeplay" which is manufactured by a company
in South Africa. It has a wind-up clock mechanism with a little
generator inside, and covers SW and MW, I think. I have seen a review
somewhere, and I just saw it advertised in the Delta "SkyMall"
in-flight gift catalog. Probably it is available in a number of other
places I am not aware of. Hope this helps.

Classic Ham Radio Equipment for Sale - Three items.

1. Johnson Viking II Transmitter AM and CW 120 watts. $175

2. Gonset GSB-100 Transmitter SSB, DSB, AM, PM, CW 100 watts $125.

3. WRL Globe King 400 Transmitter. No cabinet - has three separate 19" rack mount sections. A basket case but very restorable. $100.

Due to their weight and size, these items are difficult to ship and must ask for direct pickup. I am located in Tully, NY, about 15 miles south of Syracuse.

Many thanks and please email for more info. Mort Caldwell W8IFN
caldbio@dreamscape.com

de maximale toegestane hoeveelheid verkeer gegenereerd
heeft.
U kunt controleren of dit voor de door u bezochte pagina het geval
is, door alleen de gebruikersdirectory, zonder verdere subdirectories
of bestandsnamen op te vragen, dus bijvoorbeeld:

http://home.pi.net/~abonnee/

Als de pagina tijdelijk is afgesloten, krijgt u hier de melding:
"Deze homepage is afgesloten".
In dat geval zullen de pagina's de volgende maand weer
beschikbaar zijn. Tot die tijd kunt u de eigenaar per email bereiken.

This page is not available

Unfortunately the requested page is not available.
It is possible that the server has been instructed not to show this page,
because the directory has been shut down due to heavy traffic.
You can verify this by requesting just the members main-directory,
without subdirectories or filenames added, for example:

http://home.pi.net/~member/

If the page is shut down due to heavy traffic, you'll get a message like:
"This homepage has been shut down".
In this case the pages will be available again next month.
In the meantime you can reach the owner of these pages by email.

Bummer....Texas Towers has them for $279.

Date: Tue, 08 Jul 97 11:41:21 PDT
From: gpewitt@execpc.com
Subject: Schematics needed A and B supplies

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.
One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

Date: 9 Jul 1997 03:52:58 GMT
From: "Greg Ottria"
Subject: Yaesu VX-1R Scanning?? 1 band...

Yep Only one band at a time. But you can do a "Dual Band Watch". Which
means that it will only watch one channel. The memory is configured like
Yaesu didn't know what they were doing! It has two groups of memory that
you can switch between by turning off the radio and turning it back on
holding the M/V and the AR key. The first group holds 52 memories that is
used for 8 of the 9 bands (BC Band has it's own 10 channels). You also
have 10 scan edges and a home channel per band (except BC Band).

In the second group you have 142 memories BUT they will not write the PL tone into a channel!!!

Icom IC-751 tranceiver with built-in AC power supply.

I'm sorry I have no idea what it's worth; Suggestions would be appreciated.

Also available is the matching antenna tuner model AT-150.

It is apparently in very good condition, at least it's clean as new and not scratched up. It was always in his radio room, not the car.

Now located in Virginia. Please email direct, write, or call. Thanks.

Subject: ** BA WEB page : please, take a look! **

Hello!

As title says, I'm working on a Boatanchors page. Please, visit it at:

http://www.geocities.com/SiliconValley/6992/

and add it to your Bookmarks... I'll add information often!.

In my page you can find information about the R-388, R-390A, SP-600 and
some other BAs and also about my radio station. Please, if you visit my
page, send me any comment you have about it. I'll be most grateful.

Thanks and best regards.

From: "James Sakane KD6DX" <sakane@earthlink.net>
Subject: Standard C510A

Any wide receiver modification available for the C510A ?

Still no word on the receiver mod....maybe Standard completely eliminated
any possiblilty of a wide 800 Mhz receiver.

Anyone willing to play with RD90 RD91 RD92 and RD93 or RD76 and RD77 on the
component
side of the circuit board ? These resistors next to the main microprocessor
have to due with radio operation outside of the USA.

You have a problem that is wide spread in FT50s. It is a real shame that Yaesu still sells this defective radio and pretends it isn't there. You can return it to Yaesu, they will stick some copper tape over the power modulke and send it back. Chances are it won't be fixed.

Kind of like advertising the VX-1R with 290 memories, not really true, but it seems to be part of Yaesu's marketing strategy, "maybe nobody will notice".

Good Luck!

Tom

From: Al Lorona
Subject: Getting started in CW: 15 or 40 meters?

Hey, Dave,

Congratulations, and welcome to the CW bands. We can use all the good operators we can find, and gaining experience at 10 WPM is an excellent way to improve your skills.

Okay, I'll get off my soapbox and give you my opinion on bands. If you will be operating mainly in the evening and at night, 40 is going to suit you better. It will be a few years before 15 opens reliably (every day) and for a significant portion of the day. The way it is now, at the bottom of the sunspot cycle, you may hear 15 open for an hour a day a few times a week. Not enough to keep my interest! And, even during the day, 40 meters will provide good local contacts with strong signals, low noise, and little fading pretty much all day. You may even work some DX.

Now for some bad news: a 40 m antenna is three times as long as a 15 m antenna. For example, a half-wave dipole is approximately 67 feet on 40

vs. about 23 feet on 15. However, a 40 m dipole will also work on 15 without modification, in case you decide to add that band to your repertoire later.

Good luck, and I'll see you on the bands!

R,

Al W6LX

A most excellent post, Glen. One thing I might humbly add is while Mr. O'Brian keeps referring to some of us as "anon spammers," the correct terminology for me would be a "troll." And, while Mr. O'Brian is certainly enamored of the term, my posts are certainly not "spam." I have on occasion heard such posts referred to ingloriously as "troll droppings."

I most heartily applaude your dedication, Glen, to assuring the terminology on usenet groups be as correct as possible to ensure at least

a modicum of civility.

And to little jimmy: the reason there is no big movement in "the group" to
come protect and defend you is simple: NO ONE LIKES YOU.

1079. FT-50R PROBLEM

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-12 00:00:00 UTC
From: Mike <mlcline@ix.netcom.com>
Message-ID: <33C78C46.6B21@ix.netcom.com>
Source record: 170552

When my unit is already turned on and I insert a audio jack or computer interface unit starts to transmit automaticly. It want stop until cord is pulled out or unit is turned off. If plug is inserted before turning radio on no problems. Can anyone suggest a fix?

Thanks for any help,
Mike

REPLY...

Mr. Tack Wei, you're talking about some pretty cutting edge stuff here. First of all, Amateur radio operators (and radio operators in general) are not usually concerned with transmitting into the human body, so I'm not sure you're going to get much help.

Second, you were a little vague on the "considerations" in question.

Are you considering the strength of the signal once it reaches the receiver (after passing through tissue)? Are you considering transmitter power? Are you considering which frequency to operate on? Are you considering tissue damage caused by RF transmissions? Are you considering cumulative effects on tissue caused by long-term RF transmissions? Are you considering false triggering caused by interference?

In other words, what considerations do you want us to address?

Your message leaves a lot of questions unanswered. What type of equipment are you going to use? Have you done any testing to see how much signal is needed to pass through "x" amount of tissue? How much tissue do you need to transmit through? And how much power does you nerve stimulators need to function?

When you reply, please also send email to me (I don't go into the Amateur Radio newsgroups that often). This is a very interesting topic and I would very much like to keep up with it.

Dwight Stewart

1081. Re: Standard C510A

Jim:

Very early releases of this model did have a simple "clip a diode"
Cellular mod, but it's since been disabled permanently for some time
now. The only other mod I'm aware of is wide band XMIT, which involves
clipping a diode, but it's a no'no to XMIT out of band.

Bill Crocker

>The transmitted carrier frequencies are between 1-20 Mhz.

That better be a mighty big bowl! To be an effective reflector,
the radius of the bowl needs to be at least 1/2 wavelength at
the operating frequency. At 1 MHz, that's a bowl diameter of
300 meters. At 20 MHz it is still 15m. Clancy's character was
using a satellite cellphone with an operating frequency on the
order of 2,000 MHz (2 GHz). That would only require a bowl
15 cm in diameter (though bigger is always better if you want
gain from the parabola).

Any good conductor will suffice for the reflector surface. Of course
silver, copper, or aluminum are the top three, but even steel will
work, particularly if you're more interested in the shielding property
than in reflector efficiency. Aluminum foil will work if you can shape
it properly, and maintain it in that shape.

Zenith 7000 C/Ku Satellite Receiver For Sale

This is a great unit, and includes UHF remote and MODULE!!!

Just moved to development where BUDs are not allowed, so I still have the receiver (didn't take the dish with me from the old place).

Will sell right now for $350 (that's nearly the cost of the module alone!)

Contact: Spencer 916-631-9200
or email: spencer@ns.net

Source record: 170560

Hello All;
I am selling the Kenwood TS-440SAT with the optional PS-50 power
supply and optional Kenwood MC-60 amplified desk mic. All has less
then 5hours of use. I'm the 2nd owner. The 1st owner purchased this
unit not knowing about his qth's restrictions on no outside antenna
laws. Both of us are non-smokers..
Also all original paperwork, cartons, user's manual, covers
for the 440 & PS-50 & optional service manual are included. I have
the MFJ-1272BX tnc-microphone switchbox also if interested..
Asking $765 for TS-440SAT with both manuals, paperwork
cover & original carton. This unit has the auto
antenna tuner, been modified for "MARS" and the
optional 7 digit LED read out. Has 100 memories
plus much more.. We detail if interested
Asking $175 for PS-50 with cover and original carton
Asking $85 for Kenwood MC-60 desk mike
Asking $980.00 + shipping. For all the above Or Best Offer.
This is a must see hf setup and I would prefer any potential buyer
to see all the above before buying.. This is One Great Setup..
Reason for selling is strictly financial. Please re:me either through
Packet: N2RIF@WM2F.#SNJ.NJ.USA.NA
Or Better
Email: n2rif@amsat.org
My phone# is: (609) 386-9382 but sorry it is busy most of the time.
You can try though anytime from 10am to 10pm ET..
Thank you for reading my sale's bulletin.

>
> tvu@hotmail.com

Yep. It's probably RF getting into the modem via the audio leads.
A 0.01 ceramic capacitor across your audio leads (eg: hot to gnd)
conection to the modem pcb should give some more protection.

Message-ID: <8DB9265.01A6004DD4.uuout@grinder.com>
Source record: 170566

ST>I picked up a motorola vhf amp model #N1274A labeled freq.136-150.7 mhz.
ST>The amp developes abt 70 watts with 5 watts of drive. Anyone seen one of
ST>these? Any idea's on what a safe amount of drive is? The amp uses some
ST>sort of RF sensor to auto key when drive is applied. Any suggestions on
ST>how to modify it to work on SSB? Any assistance greatly appreciated.
ST>stan/kb8jlv in too hot! hawaii

I have one of those amps. I wouldn't go much over 5 Watts of drive
with that amp. It was designed for 5 Watts from a Motorola HT.
The limit is in the neighborhood of 8 watts. After that, you'll
smoke it. Believe me, I have seen it done on these amps! As for
using it on SSB, forget it. The amp is strictly for FM.

Try this: Use a small rubber o-ring, (the size of the recessed area of the power button), and glue it to the radio. BE CAREFUL not to glue the button in the process. I've had the o-ring on mine for sometime now and it really does help with the problem.

Hi Tack,

What you are talking about sounds very similar to a program I was involved with in New York state. Does this proceedure involve the threading of an electrode into the spinal column? If so, it has been done -- with no success.

In my case a receiver was implanted in my lower left flank and a small donut shaped antenna was secured over the skin above the implant. The radio signals travelled through the flesh into the receiver and were transformed into electrical signals which powered the implanted electrodes.

If this is a close approximation to your proposed procedure, please cantact me as soon as possible. The project is a waste of time and money. I should be able to help you find some of the research material.

Sincerely,
Cornel

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all, I have a Kenwood TH-78A dual band Handi talkie that I'd like
to trade. It has 3 battery packs. One is 12 volts at 800ma, one is
12 volt at 700ma and the last is 7.2 volts at 800ma. ALL the packs
are in very good condition, the 12@800 and 7.2@800 are not even a year
old. The radio is an 8.5 - 9 out of 10. It is in excellent working
condition. It also has the mods done. It also comes with the manual
and a W&W charging CUP, NO CHARGER. I use the W&W charger
for another radio. I bought the radio without a charger.

I'd like to trade for an older 2 meter all mode rig with a digital
display and PL. It must be nice looking and good working
order. I'd like a base unit but would consider a mobile.
I will pay cash to balance the deal if needed.
What do you have??

NOTE It is only legal to transmit with this radio in the
Amateur band. Don't risk your license

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. It should read: mrusso@hoflink.com I'm trying to stop
the unwanted Junk Mail. SORRY for the inconvenience but it's getting
out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

I have not tried this yet, but I have it on good authority that you press the function key for 1 sec, then MR when on the channel you want to delete.

Funny that that was not in the manual! The only way I could delete channels before was to use the ADMS software.

That gizmo is available. I believe it is the CT-44 adapter that
converts the 4 pin connector of the FT-50R or the VX-1R to a dual jack
setup.

Source record: 170584

Right now I'm looking into buying an ADI AT-600 (dual band handheld) but I'm a bit hesitant because the price is so low (100 -200 dollars cheaper than average dual band HT's with fewer capabilities). Anyway, I'm just looking to hear from anyone with any problems or comments regarding this type of handheld and/or its manufacturer.

I believe the ADI web site is at http:\\www.adi-radio.com

Thanks,

Kerry

Source record: 170614

Ok

I wonder if anyone can help me here. I just purchased a Yaesu FT-51R with the computer software (ADMS-1C). The problem is after I put it into clone mode and try and create the templete it gets to up 52% and then dies with data error and the whole process aborts. I checked my serial port connections and things seem to work fine. I am not sure why it aborts? Any ideas?

Also.. the computer software tells you how to put it into clone mode by hold down KNOB and PTT and powering on. That may be fine on a FT50 but on the FT-51R clone mode is Function and power on and then up arrow.

Has anyone gotten the ADMS-1C to work with the YAESU FT-51R?

Would appreciate any help.

Sorry folks, got another question.

To make an antena more directional, I�m thinking of putting it thru� a metal bowl (read it in a Tom Clancy novel :)), acting as a parabolic reflector. Can I use ordinary kitchen aluminium foil too? And what�s the most easily/commonly materials available.
The transmitted carrier frequencies are between 1-20 Mhz.

I�ll also be checking here frequently for any followups.

Thanks in advance for any advice.

One problem - solder is to be applied to the heated work - not the
iron.

Another crumb of my fame for the little anon. But he posts with my name
and adds to my cult of personality. Nothing like free publicity! Only in
America!Post with your call next time (if you have one) and I'll send
you an 8 X 10 glossy my little wannabe!

Have a complete plug and play hf station. 50 khz to 30 mhz. NO gaps. You
provide 13volts dc @ 25 amps,this will do the rest.
Yaesu FT757GXII,hand mike. 150 watts out,.5 to 30 mhz continous transmit

and receive. Some discoloration of cabinet from wear but exceptional transmitter and receiver. Has been mobile. And worked well!
Yaesu FRB757 Relay for hf Amplifier Just bought new on newsgroup a week ago.
Ameritron AL811 HF AMP. 600 watts PEP,160-10,mint,manual. New Svetlanas at xmas.

1050$ US Postal Money Order and I ship same day and e-mail tracking number. Price is firm no trades. Package deal. And unlike Bruce Felder,I know the history of this equipment. I hope everyone sees this ad through all that RogerPeterson/King Radio spam crap. Thanks Jim Can arrange sked if you want to hear it in action.

You've never heard of an a/b vfo and a split switch? Good Lord,try a rig
made in the last two decades. You really need to operate more.

>Thanks in advance for any advice.

Depends on what your trying to achieve and at what frequency.

Foil coated onto a surface will act as a good reflector, as will wire
mesh (as long as the holes are no bigger than 1/10 of a wavelength).

A small paraboli of 80cm'ish will only be if much use above around 1 GHz
to give useable gain over a yagi.

Lower freqs in the VHF and UHF range will require bigger paraboli
to give bigger gain.

You also have to watch the beamwidths too. A large dish at microwave
frequencies can have a very narrowbeam width, making pointing it in the
right direct hard!

Let me know what you're actually trying to achive and I'll see if I can
help!

1137. FT-2400 VFO knob

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-12 00:00:00 UTC
From: AWL@skognet.com
Message-ID: <868703649.14415@dejanews.com>
Source record: 170635

Does anyone out there know of a Fix for the skipping problem
that the FT-2400's and FT-2500 have ?

You move the vfo knob and somtimes it changes freqency others
it skipps , Like 2 or 3 memory locations or the same in direct
frequency dialing.

1138. Collins KWM380 help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-12 00:00:00 UTC
From: GDanaher <gdanaher@flash.net>
Message-ID: <33C75E91.CCA55C4D@flash.net>
Source record: 170636

I am attempting to troubleshoot an audio problem on a friend's Collins rig using a Shure Brothers mic, about ten years old. My transmission can be heard but audio output is very low. I suspect the mic is not working properly and may NEVER have worked properly. Anyone have a guess as to what the proper impedance of the microphone should be to match the radio? I have no paperwork with either and am working from my seat, so any thoughts would be appreciated.

Gary

Frederick Electronics?
I hope that someone may be able to help me in my quest to find
information on the following Plantronics/ Frederick Electronics
products.

Model 1280 RTTY modem
Model 5554 HF Exciter
Model 1202R VF telegraph receiver
Model LEM-1 duel link RTTY error monitor

Any information such as operation instructions or external
connection information would be most helpful. Of course I am
more than willing to pay any coping and shipping cost that you
may have.

Yaesu FT-51HP
Yaesu FT-50RD
ICOM W32A

I would like some comments on my selections, and particularly on the
features and capablilties of the FT-51 versus the other two.
Recommendations on where to purchase will be welcomed. From what
information I have, prices are comparable for the HTs, it seems there is
some difference on the accessories. I would want a compatible
quick-charger, extra battery, case, programming software, and
microphone. Please advise via email.

barryoXX@fastlink.com.au writes:
>The FT-10R has no meters. All information is on the display.

Well, it does in fact have an S-meter, which is part of the display.

No one suggested that it had two meters, though. They were saying that it transmits on the two meter band. For people in some countries, that would be spelled "two metres".

Most adults reading this are able to deal with the fact that this particular unit of length is spelled differently in different countries, without feeling the need to make stupid comments.

Or did you really not understand that "meter" is both a device and a unit of length in some countries?

Dave

(from Canada, where the official spelling is in fact "metre", but everyone understands both)

Mike (again)

Date: 5 Jul 1997 15:46:11 -0700
From: davem@cs.ubc.ca (Dave Martindale)
Subject: comments on "booster" amplifier for use with handheld

At the moment, I have a FT-50 as my only transceiver, so it has to act as my "mobile" and "base" radio as well as a handheld. It's not bad with an external antenna in the car, much better with a bandpass filter (DCI) between it and the antenna.

Now I'm looking at trying to make things work reasonably at home. The handheld on its own barely reaches my normal 2 M repeater - not surprising since the path is not quite line of sight (there's a hill in between). I can hear the repeater pretty well. Switching to a half-wave antenna improves things a lot, but is impractical for continued use. So, I'm going to try installing a discone (that I have anyway) in the attic, and see how that works.

I do expect that I'll want a bit more transmit power, particularly with the antenna in the attic. MAHA makes a line of "booster" amplifiers that I can obtain locally. Some of them are "docking" amplifiers which have a dummy battery pack mounted as part of the amplifier - you remove the radio's own battery and mount the radio on the amplifier, which provides operating power and mechanical support. This seems like a nice setup.

I'd like to hear how people who have tried these MAHA boosters in particular, or other booster amps for handhelds, like them. Do they work well? Any problems?

Also, MAHA offers two different docking models. One is 2 m band only, but contains a GAsFet preamp for receive, while the other has no preamp but is a dual-band amplifier (2 m and 70 cm). Is the preamp likely to be useful? (The antenna has no gain and is under a roof). Or is dual-band TX a more worthwhile feature?

Thanks for any info,

Dave

I have heard the same thing. They are always WINING about poor sales
and threatening to get out of the Ham business because they are loseing
$$$$$$. This CRAP has been going on for Years. Either get out of the
Ham business or stopp your crying! Their advertising is also like this.
On the Kenwood web site it said that Kenwood would stop all the Coupons.
They explained that if a Ham saw a radio they liked but no discount
this month they would just wait till next month knowing that the next
coupon was right around the corner.(Real nice way to treat us
customers).

>
>Thanks.

I have had a FT1-1000 for about 4 years. The fan is very quiet - no
problem at all. If there is a noise as you describe it sounds like
the bearings are going out. Or perhaps it just needs oil/grease.

Call Yaesu and talk to the technicians - they are very helpful. I am
sure they will have a replacement, if that fan is beyond repair.

Good Luck

MINT CONDITION - each comes with antenna & battery -- $450.00ea/incl shipping

I have aproximately 25 Motorola HT-600 portables available for immediate sale.
These HT's are 5 Watt, 6 channel, 157-174 Mhz. bandsplit. I will have them
programmed to your frequencies and PL's as you specify. I also
have a few speaker/mics, six-bank chargers, some single rapid
chargers, and a few other accessories for these radios. I will sell
these accessories with purchase of radios only! Radios
are all in excellent condition, and come complete with
battery, antenna, and belt clip or drop-in holster. Price is
$325.00 each plus shipping. Please Email me for quantity pricing.

CQ Magazine - August 1995 issue - $2.50 including shipping
CQ Magazine - Sept. 1995 issue - $2.50 including shipping
73 Magazine - Oct. 1996 issue - $2.50 including shipping

To purchase any of the above, leave message here or send Internet
Email and mail check or money order to me:

On that note, anybody use a power booster such as a Mirage (I
think) BD-35 dual band for about $180, or the Radio Shack amp for $70
for 2M only to boost their HT instead of replace/supplant it with a
mobile. I'm trying to decide which to do when I want more power than my
FT-50 HT can deliver. The HT would then become a mike. But a used
dual band mobile can often be had for $250-300, or a 2M only for about
half that. Any thoughts on either configuration welcome.

Hello!

As title says, I'm working on a Boatanchors page. Please, visit it at:

http://www.geocities.com/SiliconValley/6992/

and add it to your Bookmarks... I'll add information often!.

In my page you can find information about the R-388, R-390A, SP-600 and some other BAs and also about my radio station. Please, if you visit my page, send me any comment you have about it. I'll be most grateful.

Thanks and best regards.

From: Josh Pavlovich <jpav@mtnweb.com>
Subject: -FT-50 Case info???

Does anyone have, or know where I could find a picture of the cases for the FT-50. In particular I am interested in the new leather case designed for the commercial version, or in the cordura case. The only place I can find any reference to these is through mail order, and no one seems to have a picture.

If no picture, can someone who owns one of these describe how it looks. Do either cover the entire radio? Do they have a clear window to view through. I really would appreciate any help anyone is able to give.

Hello!

As title says, I'm working on a Boatanchors page. Please, visit it at:

http://www.geocities.com/SiliconValley/6992/

and add it to your Bookmarks... I'll add information often!.

In my page you can find information about the R-388, R-390A, SP-600 and some other BAs and also about my radio station. Please, if you visit my page, send me any comment you have about it. I'll be most grateful.

Thanks and best regards.

Subject: -FT-50 Case info???

Does anyone have, or know where I could find a picture of the cases for the FT-50. In particular I am interested in the new leather case designed for the commercial version, or in the cordura case. The only place I can find any reference to these is through mail order, and no one seems to have a picture.

If no picture, can someone who owns one of these describe how it looks. Do either cover the entire radio? Do they have a clear window to view through. I really would appreciate any help anyone is able to give.

Subject: FT-50 Antenna News

Bryan wrote:

> Why not buy the 8 buck adapter and use a STANDARD BNC antenna????

That does work, but it creates a somewhat dangerous situation with the adapter and antenna, or a stack of adapters (SMA-BNC-259) when connecting to coax, that is unsuppoted but for the tiny SMA on the HT.

No, better to buy and aftermarket antenna designed for that connector, or to hunt up SMA connectors to crimp/solder onto your coax.

>Is the Comet SMA503 a good choice for these radios? How does it compare
>to the stock ones?
>
>Also, are the short 4cm +/- antennas worthwhile? Thanks HT KF4SXT.

These teeny weeny antennas have a specialized role....like being able to put your HT in your pocket without the antenna poking in your eye. But in terms of gain, they are primarily of use in short range communication. Good for putting your HT in your pocket to keep track of friends at a hamfest, for example, or if you are within line of sight of a repeater.

If you want to improve the gain over the stock rubber duck, consider the Comet SMA-3. It is 9.75" long and has tri-band capability (144-220-440 Mhz). I am able to hit the Mt. Greylock (MA) 2 meter repeater from approx. 65 miles away from an indoor location at the full 5 watts output of the FT-50R

Enjoy yourself,
Ray K1XV

Subject: Getting started in CW: 15 or 40 meters?

Go for the 40 Meter Band. It may be a little noisier and
there are some European BC stations on at night, but
15 meters is really not open all that much.

I think you'll get a lot more nightly experience with
contacts on 40 Meters.

Go get 'em!

Date: Tue, 08 Jul 97 11:41:21 PDT
From: gpewitt@execpc.com
Subject: Schematics needed A and B supplies

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.

One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

it is still Private Line. Amateurs call it ctcss [continuous tone coded squelch system] and use more tones than the standard set offered in systems used in the commercial side of the house. police fire rescue business band etc.

wrote:

>Am interested in buying a handheld with wide receive capability. Please
>tell me how you like your VX-1R

Nice unit, tiny, good rx and tx, but one main flaw: Memories stink

I can't understand in this day and age why Ham radios still only have 40 or 100 or so memories... christ, my little home brew PLC for work has more memory than all my ham rigs combined and its a small as the VX-1R... When are the manufacturers gonna get it right and just put 5000 or 10000 memories in the damn things and make it configurable, ram is cheap and small today...no excuse for this.

The problem with the Vx-1r is the advertising said 200+ memories, but only 40+ are usable with settable tones etc, the other 140+ have to be used in a different powerup mode and no setable tones etc, and there are other quirks with the memory.

Aside from that, if you can live with 40+ memories, its great...

Subject: Radio Shack mobile radio

Well Mud, it might be a litle easier to know a model number, what he's
asking for it, and why he's "eager" to sell it. .Radio Shack makes a
decent radio (OK, I know that's gonna get a flame) and I just sent off for
my second handheld HTX-202. I like them even though a LOT of hams are very
much against the Radio Shack name. I live near Fairbanks, Alaska and when
I grab a radio to take with me for safety reasons, I want one that I KNOW
will work when I need it too. I can't say that about my old Icom handy.
Let us know the model number, etc.. and I'm sure you'll get plenty of
advice.
BTW, your post said mobile radio... Is that the 10/35 watt powered radio?

I have a 251A and the original manual. The 251E option had a tone burst (1750khz) board addition which connected to J6 on the main board. This is a four pin connector. If you have the schematic for yours this should give you what you need to know for inserting the audio. If you don't the schematic, let me know and I'll give you the pin out. 73, K6KME

>1) One of the 6BQ5 gets extremely hot and glows a bright red. Any Ideas on
>what could cause that?

Don't run it red hot for too long at a time, you will destroy it.

My first guess would be that the hot 6BQ5 has lost its grid bias somehow. Check the grid voltage on pin 2 of all the tubes with no signal. They should all be the about the same and measure somewhat negative. If pin 2 on the hot one is 0 or close to 0, then check the various components connected to it until you find one that is wrong.

Stereo amps like this should be easy to troubleshoot since you have
one channel that you can compare to to see what a correct circuit
should look like.

From: Phil Wheeler <w7ox@ix3.ix.netcom.com>
Subject: Yaesu VX-1R Vers. FT-50

I have both. For an only rig, get the FT-50: 5 watts vs. 0.5 watts is a
big difference.

I like the VX-1R. But, as with the Std C508, it is a pretty short-range propostition (near another ham hiking, or near a repeater).

Phil

Right now, I'd go for 40 metres. Contacts up to 3000km should be quite
possible with QRP. Longer distances are very difficult. Thus 40m is
better for domestic operation.

Two years time 15 m should be good. International contacts will be much
easier on 15m than 40m.

For this period in the sunspot cycle, 40 meters for sure! I've worked Europe in the evening several times running 5 watts on 40 meters using a dipole 55 feet high. DX is possible, you just have to be patient.

From: kn4aq.gary@mms.net (Gary Pearce)
Subject: Icom w32a problem - very poor sensitivity

Hi, John,

Everything you say leads me to the same conclusion - your W32 has a sensitivity problem. My W32 hears everything just as well as all my other receivers.

But to know for sure if you have a problem, you need to test it with a calibrated signal generator (part of a device often called a "service monitor"). In this area, most hamfests have someone set up with a service monitor testing HTs. You could also ask around on local repeaters, and as a last resort, ask at a local 2-way radio shop.

The radio should hear an audible test signal set below .2 microvolts. If the hard evidence proves a problem, you ought to be able to show Icom you need a repair.

Subject: FT-50 owners, how to stop accidental power on?

Ron LaPedis wrote:

> I just bought an FT-50 and the slightest touch (not 1/2 second like
> the
> manual says!) turns it on. If it falls over, it turns on. I'm afraid
> it's gonna turn on in a pocket, in the glove compartment, etc. Any
> suggestions?

Hi Ron,

Yes, that is the sole complaint I have about my FT-50. I finally enabled
a 30 minute APO so I won't be constantly presented with a dead battery
every time I take the HT out of my gear bag.
Another option is to keep it a case like "The Pouch". Its made of
neoprene and padded fairly well so in addition to protecting your HT, it
will prevent all but the most direct pressures from activating the power
button.

> Wondering if anyone has come up with mods to open the new VX-1R ?
>
> Thanks
> Steve

The Yaesu VX-1 mods were posted last week by KS4HR(thanks). But since severa; folks have requested them, I we have a couple of out notes to add to them here it is again:

1. remove battery

2. remove 3x philips screws from back of case

3. Carefully lift rear of case off. The edge along the side where the battery goes is held together with 3x hook snaps. reach inside the battery compartment with a small straight blade screwdriver to release the first one or two. Be careful not to loose the battery door hinge pin

4. with the radio laying face down, look in the top left corner, just below the rotary switch, see two open jumper pads. CAREFULLY bridge these two jumpers(separately) with solder

5 reinstall back cover

6 reset CPU per the owner's manual; press and hold the M/V and the AR buttons while turning the radio ON, then press the FW button

radio will now transmit from 137-174 Mhz and 410-470 MHz. to activate tx in the UHF T band)470-512 MHz, set the operating mode to Narrow FM

Oh yeah, this mod also adds 870-894 MHz receive too. Isn't that just special... For those that choose not to do this mod, you can image receive this range by tuning accross 952.9-876.9 MHz

receive sensitivity tests indicate very good sensitivity weel beyond the Ham bands, .3 uV up through 175 MHz and to 512 MHz too 800 MHz sensitivity SUCKS, but is better than stated in the manual, about 2 uV
have fun

Will trade Johnson KW Matchbox with SWR unit and manual.
It has been in storage since the mid-80's.

CONDITION:
Electrical VG
Mechanical VG
Appearance G

There is some paint wear, panel lettering fine, plastic face
on panel meter shows some hazing. No dents.

Want a Yeasu FRG-7 or FT-757 in VG condition. Other SS HF TVR
operating on 12Vdc considered. Eyeball trade preferred.

Will sell Matchbox for $250 + shipping (firm). No COD's.

Please reply by email to avatar@frii.com

From: Hendrik Susanto <hs036@csufresno.edu>
Subject: Alinco DJS-41(T)

Does anyone know the difference between the Japanese and American version of the DJS-41? My Japanese friend wants to do the extended mod and be able to use it both on the American FRS band and also on the Japanese FRS band which is in the 422 MHz range.
For those who like to know, The Japanese FRS band consists of 9 and/or 11 basic simplex channels plus 9 more for repeater use. Simplex from 422.2 to 422.3 MHz. Power output is usually limited to about 10 mW. This

licence-free band has been in use for many years and is very popular there. There are many repeater clubs across the country.

From: "J. Dirk Bremer" <dirkb@myself.com>
Subject: ICOM/Yaesu Newbie Questions

I am in the process of studying for a Tech license adn want a HT as my
first radio. Form the catalogs and sales literature I have seen, I have
narrowed my choices to the following in order of precedence:

Yaesu FT-51HP
Yaesu FT-50RD
ICOM W32A

I would like some comments on my selections, and particularly on the
features and capablilties of the FT-51 versus the other two.
Recommendations on where to purchase will be welcomed. From what
information I have, prices are comparable for the HTs, it seems there is
some difference on the accessories. I would want a compatible
quick-charger, extra battery, case, programming software, and
microphone. Please advise via email.

equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

Subject: I. For Sale and Wanted To Buy

I am a ham hobbyist, NOT a dealer. I do this for fun, not an
investment! I have a few things to sell/trade these days:

I. For Sale and Wanted To Buy

A. For Sale:

1. FRG-9600 Yaesu 60-905 Mhz AM/FM/SSB scanner/receiver.
Original box, manual, etc. $325

2. Yaesu FIF-232 RS-232/TTL CAT radio control interface. $55

3. PK-232MBX, RTTY/AMTOR/Pactor/Packet/Fax latest firmware and
new in box. Purchased couple months ago and been in box since.
With receipt, box, manual, cables, etc. $175

4. Pride QRP 100w amplifier with preamp. 3.5 to 30 Mhz continuous
coverage broad band (no tuning). $100 obo

5. Gessy 12vdc 6a Bench Power Supply Offers?

6. 28.8 data/fax/voice modem, Rockwell chipset
ISA internal with Win '95 driver disk
Purchased for wife, used for a week, now she
has a new PCI motherboard and no extra ISA slot
$25 shipped (Priority Mail)

B. Wanted to Buy:

1. ISA or VLB SCSI controller.

2. 486DX2/66 or 486DX50 (not DX2/50) 5v 5v 5volt CPU

3. Collector of older RTTY terminal units looking
for more to add to collection, including:
IRL, Dovetron, Hal, Robot, Flesher, Frederick, etc

4. Looking for "select" older Yaesu "Fox Tango" equipment
and accessories for same, filters, boards, speakers, VFOs,
tuners, scopes, transverters, etc. Stations, estates, etc.
Working or not!

1157. LOOKING to TRADE

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-13 00:00:00 UTC
From: mrusso@hoflink.comNO.JUNKMAIL
Message-ID: <5qbhmm$334$1@usenet76.supernews.com>
Source record: 170441
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all, I have a Kenwood TH-78A dual band Handi talkie that I'd like
to trade. It has 3 battery packs. One is 12 volts at 800ma, one is
12 volt at 700ma and the last is 7.2 volts at 800ma. ALL the packs
are in very good condition, the 12@800 and 7.2@800 are not even a year
old. The radio is an 8.5 - 9 out of 10. It is in excellent working
condition. It also has the mods done. It also comes with the manual
and a W&W charging CUP, NO CHARGER. I use the W&W charger
for another radio. I bought the radio without a charger.

I'd like to trade for an older 2 meter all mode rig with a digital
display and PL. It must be nice looking and good working
order. I'd like a base unit but would consider a mobile.
I will pay cash to balance the deal if needed.
What do you have??

NOTE It is only legal to transmit with this radio in the
Amateur band. Don't risk your license.

NOTE If you want to E-mail me, you MUST REMOVE the NO.JUNKMAIL
in my address. I'm trying to stop the unwanted Junk Mail.
SORRY for the inconvenience but it's getting out of hand.

Always Available through Technology..... UNLESS SOMETHING BREAKS!!

I am selling the following items for a ham widow. I knew her husband well and am trying to help her out. I have checked out these items and they all seem to work fine.

1- Kenwood TS-930S with antenna tuner. this unit has the top cover painted silver. otherwise it in clean. $700.00

2- Kenwood TS-930S with antenna tuner. This unit is a 9+ and works fine. $750.00

3- Palomar Antenna Tuner PT-2500 with built in noise bridge $125.00

4- Icom IC-22S 2 meter mobil with diode matrix. $85.00

5- Icom IC-229H 50 watt 2 meter mobil $200.00

6- Kenwood TL-922A legal limit amplifer $1100.00

I have the paper work for all except the note book. All prices + shipping. I am making nothing from this. Just doing it for an old friend.

email me if you are interested in any or all.

tnx in advance de Dan KF0OV

Tack:

First, you want to get your signal into the body. So, avoid even HF.
The body has better absorption as you move higher & higher in frequency.
When you get up to the microwave range, the skin starts to present a
significant impedance discontinuity, which means reflection of your
signal. You will need more & more power, and most of the power will be
reflected or go into tissue heating.
Go down as low as you can. Actually, I suggest that you use magnetic
field coupling. You don't need distant data transfer, just a
non-invasive link, right? So, use about 100 KHz, with a small loop as a
transmitter and another small loop implanted under the skin. Milliwatts
will give very adequate coupling, and the freq will support a reasonable
data rate.
Check out the technology already developed for programmable cardiac
pacers and for implantable volumetric infusion pumps.

Source record: 170449

Hi all, does anyone know how I could hook a digital voice recorder up to
my FT470?
I would like to use this to keep track of all the radio operators I talk
to.
I am visually impaired and need a system I can listen to so I can look up
someone's call or enter a new one.
What models of voice recorders work with that unit?
How would I go about install ing it?
IF anyone else uses one, how do you like it?
Thanks in advance.

For Sale Sony SW-7600G portable shortwave radio. About one year old, excellent conition (as good as new). I don't have the box but I have everything else. Brand new this radio goes for about $170 plus S&H or tax. I would like $120 I'll even throw in the batteries!!!! A small price to pay for such a great radio.

Source record: 170458

I picked up a new MFJ ClearTone speaker model mfj-281 at the hamfest. This thing is amazing! CW sounds clearer and louder than with any speaker I've tried so far and I've tried many. It's only 3" square, has a mounting bracket and cost a whopping $10. I've put my big speakers in the closet for now. This speaker was designed for ssb and sounds great in that mode too. Copy through qrn is much better now.

Cross-posted to: ok.tulsa.general,rec.radio.amateur.equipment,rec.radio.cb,rec.radio.swap,sci.electronics.equipment,sci.electronics.misc,sci.electronics.repair,tw.bbs.sci.electronics

I have several of these Dosimeters left. They measure Magnetic Fields from 10 to 3000 Hz (calibrated at 60 Hz and the 2nd through the 5th Harmonics of the power frequency). They also measure the Electric Field Intensity throughout this frequency range. The magnitude or field intensitites are registered on an analog meter scale that is easy to read and interpret. The range of magnetic field intensity is from 0.01 to 3 milligauss for one range. 0.1 to 100 milligauss on another range. Zero to 100 kilovolts per meter for the Electric Field Intensity range. An if that wasn't enough, there is a range for measuring the RF and microwave frequency window from 50 MHz to 3 GHz. Density measurement range includes 0.01 to 1 milliwatts per square centimeter.

All of this in a convenient handheld, battery operated, dosimeter.

Price: $250 plus shipping and handling charge of $12.50

There are only three left, once their gone, their gone!

Source record: 170460

I am also looking at buying an ADI AT-600. I went to Ham Radio Outlet because they list it in their catalog and the guy said the Portland, OR store didn't order any because they were unfamiliar with the radio. He said that the other stores had some but that doesn't help me much. He did his darndest to sell me an ICOM ICW32A or a Kenwood TH79A. They both look like good radios but I like the specs on the ADI better. I am particularly interested in the expanded TX and RX range available with software and hardware mods. Both of the other radios have a much more limited range. As of now I am holding off but unless someone can change my mind I will have them order the ADI radio. I guess someone has to be the first one to try something new!

1177. TS-570 vs Omni V

Newsgroup: rec.radio.amateur.equipment
Date: 1997-07-13 00:00:00 UTC
From: Steve Ellington <n4lq@iglou.com>
Message-ID: <33C95911.3004@iglou.com>
Source record: 170461

A Kenwood TS-570 has been the guest of my shack for the past week.
I spent many hours and dozens of QSOs comparing the two rigs and
feel a need to report my findings to the TenTec crowd.

The TS-570 is Kenwood's most modern rig. It's computer interface is
second to none running at 57.6kb through a 9pin serial port directly to
the pc.
Rig control software was available through their Webb page and
performance in that area was awsome. Every button, knob and display was
controlable bi-directional. I was impressed.

Kenwood makes claim to "incredibly clear and powerful audio". However
their manual specifies 1.5 watts at 10% distortion. Hardly what I would
call incredible. SSB and AM sounded quite good but cw was terribly
distorted at low volume levels using an 8 ohm speaker or headphones.

Being a cw operator, I look at a radio somewhat differently than the
average phone operator. I'm interested in the clarity and purity of the
recieved cw tone, proper agc response to qrn, narrow filter performance,
full break-in capabilities and of course a good transmit tone.

Concerning transmitt, the TS-570's tone was reported by all to be
excellent but somewhat softer than the Omni. Under weak signal
conditions, switching to the Omni in mid qso resulted in such comments
as "sounds like you turned on the amp", cpy better now om etc.

QSK on the 570 was fairly smooth and quite but relatively slow. I ran
what I call the "dit busting test". Another stations tries to break
me while I'm sending a string of dits. I sent a string of dits at 25
wpm. I was never able to hear the other station breaking. This test was
duck soup for the old Omni V.

The TS-570 is advertised as a "DSP radio". This is totally incorrect. A
true DSP radio uses dsp technology from the front-end to the audio
amplifier. No coils or transformers are needed in the R.F. chain. Such
receivers are available from Collins for about $16,000. The DSP in the
570 is simply a dsp unit between audio stages and offers less flexiblity
than outboard units such as the MFJ or Timewave.

So here we are on 80 meters at night with S9 static trying to work
another station who is also S9, a tough test for any radio. I had
installed the 500hz filter in the 570. There is only 1 slot for extra
filters. The Omni V has the 500, 250 plus the extra 500hz filter.
Contact was estabilised but copy on the 570 was difficult. I kicked in
the 500hz filter which automatically kicks in a 600hz dsp filter. Noise
level from the qrn increased considerably and copy was impossible. Yes,

Kenwoods filters tend to boost qrn! I then pushed the N.R. button. This is supposed to eliminate such noise. This resulted in sound resembling something from a horror movie. Howling, chattering and muttering sounds eminated from the speaker with an occasional cw note poping through in a broken, unreadable manner. I had to switch to the Omni V quick to see if I could salvage the qso.

Flipping the antenna switch and setting the dial, I could hear the other station under the qrn. I punched the .25 filter into action and the station immediately rose far above the qrn. Then I hit the NAR button kicking in the extra 500hz filter, cranked up the audio bandpass filter and enjoyed what sounded like a code practice oscillator!

The TS-570's audio on cw was not only distorted but flat, mushy and indistinct compared with the TenTec. Another observation was the keyer in the TS-570. The keyer worked like a champ but sometimes my dits were blipped out of the sidetone. This occurred mainly when using qsk under noisey band conditions. I suspect it's something to do with microprocessor timming.

My conclusion is simply that the TS-570 is a well constructed, modern, stable, versatile rig not to be taken seriously by cw operators. These same test were run last year on a Yaesu FT-1000MP with virtually the same
results. Japan has a long way to go the outdo the Omni V on CW.

>
> thanks
> allan@ruralnet.net.au
>

well allan i spent 4 hours playing with the 756,920, and the 870s I found the dsp on recieve on the 756 lacked quite a bit and the display goes amiss when tuning the freq. you tend to overturn on the vfo and re-overturn going back because the display is not sharp and ez to read like the normal led vfo numbers, the quality on the dual recieve i didn't like and the general spec analyzer i didn't think was good at all [mind it's not a 781] . I found the 920 the dsp was ok but lacked a li'l as far as cw eliminating the hash on cw mind you would have been btter if the 500k cw filter was install[aftermarket b.t.w.] as well as the fm board.... and a.m. as well i believe. in general attractive and user friendly however the dsp is not in the if it is in the audio section for tx/rx .

the 870 i found was the bast of the bunch for dsp and especially on cw as well as ssb the menu is user friendly once you get a handle on it and is pc user ready and programable from the home pc as well. I found the quality of the 870 surpassed the 6m extra from the 920 and 756 and price wise when you take in the extra filters for the 756 and the board and filters for the 920 it more than equeled the extra features of the 870 re: no filters to buy for the 870 .

just my personal findings i hope that this has helped you for things to look for when buying the rig of your choice ..

i like the AL-1500 by ameritron.
i know, i know, the tube is way too expensive but all in all this
amplifier is a beauty. just idles away at legal limit.

From: John Nelson <johnn@flatline.com>
Subject: FT-50 Antenna News

Bryan wrote:

> Why not buy the 8 buck adapter and use a STANDARD BNC antenna????

That does work, but it creates a somewhat dangerous situation with the adapter and antenna, or a stack of adapters (SMA-BNC-259) when connecting to coax, that is unsuppoted but for the tiny SMA on the HT.

No, better to buy and aftermarket antenna designed for that connector, or to hunt up SMA connectors to crimp/solder onto your coax.

>Is the Comet SMA503 a good choice for these radios? How does it compare
>to the stock ones?
>
>Also, are the short 4cm +/- antennas worthwhile? Thanks HT KF4SXT.

These teeny weeny antennas have a specialized role....like being able to put your HT in your pocket without the antenna poking in your eye. But in terms of gain, they are primarily of use in short range communication. Good for putting your HT in your pocket to keep track of friends at a hamfest, for example, or if you are within line of sight of a repeater.

If you want to improve the gain over the stock rubber duck, consider the Comet SMA-3. It is 9.75" long and has tri-band capability (144-220-440 Mhz). I am able to hit the Mt. Greylock (MA) 2 meter repeater from approx. 65 miles away from an indoor location at the full 5 watts output of the FT-50R

Enjoy yourself,
Ray K1XV

From: Ed Loranger <we6w@qsl.net>
Subject: Getting started in CW: 15 or 40 meters?

Go for the 40 Meter Band. It may be a little noisier and
there are some European BC stations on at night, but
15 meters is really not open all that much.

I think you'll get a lot more nightly experience with
contacts on 40 Meters.

Go get 'em!

* Continuation 1 of a split message *

de maximale toegestane hoeveelheid verkeer gegenereerd
heeft.
U kunt controleren of dit voor de door u bezochte pagina het geval
is, door alleen de gebruikersdirectory, zonder verdere subdirectories
of bestandsnamen op te vragen, dus bijvoorbeeld:

http://home.pi.net/~abonnee/

Als de pagina tijdelijk is afgesloten, krijgt u hier de melding:
"Deze homepage is afgesloten".
In dat geval zullen de pagina's de volgende maand weer
beschikbaar zijn. Tot die tijd kunt u de eigenaar per email bereiken.

This page is not available

Unfortunately the requested page is not available.
It is possible that the server has been instructed not to show this page,
because the directory has been shut down due to heavy traffic.
You can verify this by requesting just the members main-directory,
without subdirectories or filenames added, for example:

http://home.pi.net/~member/

If the page is shut down due to heavy traffic, you'll get a message like:
"This homepage has been shut down".
In this case the pages will be available again next month.
In the meantime you can reach the owner of these pages by email.

Bummer....Texas Towers has them for $279.

Date: Tue, 08 Jul 97 11:41:21 PDT
From: gpewitt@execpc.com
Subject: Schematics needed A and B supplies

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.

One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

equipment and portable antennas and taking them on a Mini-DXpedition
OVERNIGHT to Alcatraz Island... THE ROCK!

The trip will be on July 26th and 27th. You can read more about it
and see just exactly what frequencies we will be operating on if you
check out the following URL:

http://cds1.net/scra/alcatraz.shtml

We will be offering either special QSL cards or Certificates. (We
aren't
sure which it will be at this time. You must send us a SASE to the
address on the URL. Also please make note of the operator's name you
talked with.)

Please look for us on the bands and we can help each other to make this
a successful mini-DXpedition! Thanks!

73,
Ken

Subject: Alinco DJS-41(T)

Does anyone know the difference between the Japanese and American version of the DJS-41? My Japanese friend wants to do the extended mod and be able to use it both on the American FRS band and also on the Japanese FRS band which is in the 422 MHz range.
For those who like to know, The Japanese FRS band consists of 9 and/or 11 basic simplex channels plus 9 more for repeater use. Simplex from 422.2 to 422.3 MHz. Power output is usually limited to about 10 mW. This

licence-free band has been in use for many years and is very popular there. There are many repeater clubs across the country.

I aquired one of these "things" a Drake ESR 324S Stero Earth Station
Reciever.
from my dad who got it at a rummage sale with a bunch of other odd stuff.

Anyone know exactly WHAT it is?

Anyone got any use for it?

Anyone got any DOCS for it?

I'm not sure even what kind of antanna to hookup to it.

I think it may be a statlite Dish reciever... But i can't prove that.

Thanx for any info

Subject: FT-50RD CELL RESTORE.

In article <33C294F0.F8011724@li.net>, Tony says...

:Hello de Tony:

I'm not de Tony but since you posted this to a public group I'll give
you an answer.

: I recently bought a FT-50RD can the cell freqs. be restored? ANy other
: mods would be appreciated.

I'm told the following works. Commence a download to the FT50 in the
usual way and then pull the data plug from the radio while the download
is in progress. I'm also told that after doing that the radio will only
TX on 144 to 146 in the 2 metre band.

Barry

From: barryoXX@fastlink.com.au (Barry O'Grady)
Subject: Getting started in CW: 15 or 40 meters?

I recommend 2 meters, although most modern amateur rigs have abandoned
meters in favour of putting all the information on the LCD display.

Bob,
I've had an ICOM 756 since 2/97 and had no problems with it,
whatsoever. I love the rig and the display. I felt the same as Yaesu's
comment until I played with one for awhile. Now I wonder how I operated
without it. It has an excellent receiver & very easy to operate. I've
heard of some hams who have had problems with the 756 but sent it back
& got it repaired. Just about all brands at times seem to have that
problem. Also are you aware of the 756 price drop? Now there's not
much difference for a lot more features. I also have a Kenwood TS570D

that I run mobile. If you're on a budget look at this rig also. I compared it to the 920 & seems to me to be a better rig for the price difference. Also ICOM told me the newer 756's have all the updates already in the radio. Hope this helps. Thanks, Jack WA0VLT

* Continuation 1 of a split message *

de maximale toegestane hoeveelheid verkeer gegenereerd
heeft.
U kunt controleren of dit voor de door u bezochte pagina het geval
is, door alleen de gebruikersdirectory, zonder verdere subdirectories
of bestandsnamen op te vragen, dus bijvoorbeeld:

http://home.pi.net/~abonnee/

Als de pagina tijdelijk is afgesloten, krijgt u hier de melding:
"Deze homepage is afgesloten".
In dat geval zullen de pagina's de volgende maand weer
beschikbaar zijn. Tot die tijd kunt u de eigenaar per email bereiken.

This page is not available

Unfortunately the requested page is not available.
It is possible that the server has been instructed not to show this page,
because the directory has been shut down due to heavy traffic.
You can verify this by requesting just the members main-directory,
without subdirectories or filenames added, for example:

http://home.pi.net/~member/

If the page is shut down due to heavy traffic, you'll get a message like:
"This homepage has been shut down".
In this case the pages will be available again next month.
In the meantime you can reach the owner of these pages by email.

Bummer....Texas Towers has them for $279.

Date: Tue, 08 Jul 97 11:41:21 PDT
From: gpewitt@execpc.com
Subject: Schematics needed A and B supplies

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.

One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

Frederick Electronics?
I hope that someone may be able to help me in my quest to find
information on the following Plantronics/ Frederick Electronics
products.

Model 1280 RTTY modem
Model 5554 HF Exciter
Model 1202R VF telegraph receiver
Model LEM-1 duel link RTTY error monitor

Any information such as operation instructions or external
connection information would be most helpful. Of course I am
more than willing to pay any coping and shipping cost that you
may have.

Subject: FS: HF station

Have a complete plug and play hf station. 50 khz to 30 mhz. NO gaps. You
provide 13volts dc @ 25 amps,this will do the rest.
Yaesu FT757GXII,hand mike. 150 watts out,.5 to 30 mhz continous transmit

and receive. Some discoloration of cabinet from wear but exceptional transmitter and receiver. Has been mobile. And worked well!
Yaesu FRB757 Relay for hf Amplifier Just bought new on newsgroup a week ago.
Ameritron AL811 HF AMP. 600 watts PEP,160-10,mint,manual. New Svetlanas at xmas.

1050$ US Postal Money Order and I ship same day and e-mail tracking number. Price is firm no trades. Package deal. And unlike Bruce Felder,I know the history of this equipment. I hope everyone sees this ad through all that RogerPeterson/King Radio spam crap. Thanks Jim Can arrange sked if you want to hear it in action.

| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |
| |
| Kind regards, |
| |

From: Hendrik Susanto <hs036@csufresno.edu>
Subject: Alinco DJS-41(T)

Does anyone know the difference between the Japanese and American version of the DJS-41? My Japanese friend wants to do the extended mod and be able to use it both on the American FRS band and also on the Japanese FRS band which is in the 422 MHz range.
For those who like to know, The Japanese FRS band consists of 9 and/or 11 basic simplex channels plus 9 more for repeater use. Simplex from 422.2 to 422.3 MHz. Power output is usually limited to about 10 mW. This

licence-free band has been in use for many years and is very popular there. There are many repeater clubs across the country.

Subject: Drake ESR 324S Stero Earth Station Reciever - WHAT is this thing?

I aquired one of these "things" a Drake ESR 324S Stero Earth Station
Reciever.
from my dad who got it at a rummage sale with a bunch of other odd stuff.

Anyone know exactly WHAT it is?

Anyone got any use for it?

Anyone got any DOCS for it?

I'm not sure even what kind of antanna to hookup to it.

I think it may be a statlite Dish reciever... But i can't prove that.

Thanx for any info

Subject: FT-50RD CELL RESTORE.

In article <33C294F0.F8011724@li.net>, Tony says...

:Hello de Tony:

I'm not de Tony but since you posted this to a public group I'll give
you an answer.

: I recently bought a FT-50RD can the cell freqs. be restored? ANy other
: mods would be appreciated.

I'm told the following works. Commence a download to the FT50 in the
usual way and then pull the data plug from the radio while the download
is in progress. I'm also told that after doing that the radio will only
TX on 144 to 146 in the 2 metre band.

Bob,
I've had an ICOM 756 since 2/97 and had no problems with it,
whatsoever. I love the rig and the display. I felt the same as Yaesu's
comment until I played with one for awhile. Now I wonder how I operated
without it. It has an excellent receiver & very easy to operate. I've
heard of some hams who have had problems with the 756 but sent it back
& got it repaired. Just about all brands at times seem to have that
problem. Also are you aware of the 756 price drop? Now there's not
much difference for a lot more features. I also have a Kenwood TS570D

that I run mobile. If you're on a budget look at this rig also. I compared it to the 920 & seems to me to be a better rig for the price difference. Also ICOM told me the newer 756's have all the updates already in the radio. Hope this helps. Thanks, Jack WA0VLT

de maximale toegestane hoeveelheid verkeer gegenereerd
heeft.
U kunt controleren of dit voor de door u bezochte pagina het geval
is, door alleen de gebruikersdirectory, zonder verdere subdirectories
of bestandsnamen op te vragen, dus bijvoorbeeld:

http://home.pi.net/~abonnee/

Als de pagina tijdelijk is afgesloten, krijgt u hier de melding:
"Deze homepage is afgesloten".
In dat geval zullen de pagina's de volgende maand weer
beschikbaar zijn. Tot die tijd kunt u de eigenaar per email bereiken.

This page is not available

Unfortunately the requested page is not available.
It is possible that the server has been instructed not to show this page,
because the directory has been shut down due to heavy traffic.
You can verify this by requesting just the members main-directory,
without subdirectories or filenames added, for example:

http://home.pi.net/~member/

If the page is shut down due to heavy traffic, you'll get a message like:
"This homepage has been shut down".
In this case the pages will be available again next month.
In the meantime you can reach the owner of these pages by email.

From: gpewitt@execpc.com
Subject: Schematics needed A and B supplies

I am trying to restore a couple of battery eliminators.
The A eliminator is a "Majestic A Current Supply"
made by Grigsby-Grunow-Hinds Co. in Chicago.
It has a selenium rectifier on the front with 5 taps
which makes me think it might be set up as a bridge
rectifier. It is marked 110v ac 60 cycles with DC output
of 6 volts at 2.5 amps max. It has a seven position rotary
switch marked A through G. I'm puzzled by the switch.

The B supply is labeled Speedway B Battery Eliminator.
It was made by the Prestolite Corp. It has a BH rectifier
tube which seems to be a full wave rectifier. It has
binding posts marked I, 22, 45, 60, 130, and 180.
Puzzled by the "I" post.

The selenium rectifier is a dead short both ways. The
BH tube heats up on one side. I think I could replace
the selenium rectifier with 4 silicon diodes and some
dropping resistors if I had a schematic.

I want to get these power supplies working to use with
a couple of very nice old TRF receivers I am restoring.

One is a Cascade made here in Milwaukee in 1926 and the
other is a Blandin Phonograph Co. made in Racine WI.
about the same period.

Any Ryders, schematics, manuals (ha,ha), advise, parts,
war stories, etc. welcomed. Happy to pay for copies
of any info or paperwork.

Thanks again to all who helped with my RCA Radiola 18.
It's coming along nicely.

Subject: ** BA WEB page : please, take a look! **

Hello!

As title says, I'm working on a Boatanchors page. Please, visit it at:

http://www.geocities.com/SiliconValley/6992/

and add it to your Bookmarks... I'll add information often!.

In my page you can find information about the R-388, R-390A, SP-600 and
some other BAs and also about my radio station. Please, if you visit my
page, send me any comment you have about it. I'll be most grateful.

Thanks and best regards.

From: "James Sakane KD6DX" <sakane@earthlink.net>
Subject: Standard C510A

Any wide receiver modification available for the C510A ?

Still no word on the receiver mod....maybe Standard completely eliminated
any possiblilty of a wide 800 Mhz receiver.

Anyone willing to play with RD90 RD91 RD92 and RD93 or RD76 and RD77 on the
component
side of the circuit board ? These resistors next to the main microprocessor
have to due with radio operation outside of the USA.

```
+-----------------------------------------------------------------------+
| |
| Mail generated on your system for a destination within the |
| 'z2.fidonet.org'-domain, was detected at this site and classified as |
| unwanted. |
| |
| If you bona-fide responded to a listserver your message unfortunately |
| also falls under that category as such type of mail is not accepted |
| nor distributed from here either. |
| |
| 'fidonet.org' is a hobby domain where individual |
| people run individual mailers using PSTN-technology out of their own |
| pocket and every such message adds to the cost. |
| |
| Therfore the original message is bounced back to you at the gate. |
| |
| Fidonet-participants are victimised by thousands of bogus listserver- |
| subscriptions and you may very well be a side-victim of this. |
| |
| In that case your cooperation would be greatly valued by crossposting |
| this mail to the postmaster/owner of the mailing-list/list-server with |
| a request to kick any subscription coming the 'z2.fidonet.org'-domain. |
| We are bothered here by it as much as you are now. |
| |
| If you are residing in the USA then the following notice |
| may apply to you. Please read it attentively! |
| |
| +-------------------------------------------------------------+ |
| | By US Code Title 47, Sec. 227(a)(2)(B), a computer/modem | |
| | /printer meets the definition of a telephone fax/machine. | |
| | By Sec. 227(b)(1)(C), it is unlawful to send any unsolicited | |
| | materials to such equipment. | |
| | | |
| | By Sec.227(b)(3)(C), a violation of the aforementioned | |
| | section is punishable by action to recover actual monetary | |
| | loss, or $500, whichever is greater, for each violation. | |
| | | |
| | I will report any violation 'abuse@postoffice.us'. | |
| +-------------------------------------------------------------+ |
| |
| Kind regards, |
| |
| Ward Dossche |
| Fidonet Coordinator for Europe |
```

Jim:

Very early releases of this model did have a simple "clip a diode"
Cellular mod, but it's since been disabled permanently for some time
now. The only other mod I'm aware of is wide band XMIT, which involves
clipping a diode, but it's a no'no to XMIT out of band.

From: "Jan Erik Mangerud" <jan.erik.mangerud@powertech.no>
Subject: TH-28e Mod

Can anyone tell me if there is any difference in modifying TH-28a and
TH-28e? I have read some different opinions about witch diode to remove,
8-9 or 10. What is the right one? On the e-model there is a green cabel on
W1 and W2. What are they doing?
Because I don't have any manual, can anyone give me a short description on
the key combinations?

Thanks,
Jan.

From: "John D. Nell" <jnell@ezl.com>
Subject: Yaesu VX-1R Question/Comment

OK, I've had my VX-1R now for about a week and can not figure out how to
enter independent TX/RX frequencies in a single memory across the VHF
and UHF bands. Has anyone done that yet?

I can enter an "odd split" in the SAME band, vhf OR uhf, but not into a
memory channel which lets me "transmit on UHF" and "receive on VHF". I
use my Standard C508A this way all the time to "mobile extend". I was
hoping to "shrink" my everyday HT even further with this little gem.

I guess if I don't hear about how it's done soon, this little baby will
be for sale and the Standard C510 will take it's place in my HT corral!

BTW, I agree with whomever said Yaesu screwed up the "scanning" function
of this HT. Only scan in a single band, come on....get with the plan,
Stan!

Oh, one last thing... where's the VX-1R FAQ section? I don't have all
day to surf the net looking for facts and fiction...but this Newsgroup
is just fine :)

From: davem@cs.ubc.ca (Dave Martindale)
Subject: comments on "booster" amplifier for use with handheld

At the moment, I have a FT-50 as my only transceiver, so it has to act as my "mobile" and "base" radio as well as a handheld. It's not bad with an external antenna in the car, much better with a bandpass filter (DCI) between it and the antenna.

Now I'm looking at trying to make things work reasonably at home. The handheld on its own barely reaches my normal 2 M repeater - not surprising since the path is not quite line of sight (there's a hill in between). I can hear the repeater pretty well. Switching to a half-wave antenna improves things a lot, but is impractical for continued use. So, I'm going to try installing a discone (that I have anyway) in the attic, and see how that works.

I do expect that I'll want a bit more transmit power, particularly with the antenna in the attic. MAHA makes a line of "booster" amplifiers that I can obtain locally. Some of them are "docking" amplifiers which have a dummy battery pack mounted as part of the amplifier - you remove the radio's own battery and mount the radio on the amplifier, which provides operating power and mechanical support. This seems like a nice setup.

I'd like to hear how people who have tried these MAHA boosters in particular, or other booster amps for handhelds, like them. Do they work well? Any problems?

Also, MAHA offers two different docking models. One is 2 m band only, but contains a GAsFet preamp for receive, while the other has no preamp but is a dual-band amplifier (2 m and 70 cm). Is the preamp likely to be useful? (The antenna has no gain and is under a roof). Or is dual-band TX a more worthwhile feature?

Thanks for any info,

Dave

I have heard the same thing. They are always WINING about poor sales
and threatening to get out of the Ham business because they are loseing
$$$$$$. This CRAP has been going on for Years. Either get out of the
Ham business or stopp your crying! Their advertising is also like this.
On the Kenwood web site it said that Kenwood would stop all the Coupons.
They explained that if a Ham saw a radio they liked but no discount
this month they would just wait till next month knowing that the next
coupon was right around the corner.(Real nice way to treat us
customers).

I have had a FT1-1000 for about 4 years. The fan is very quiet - no
problem at all. If there is a noise as you describe it sounds like
the bearings are going out. Or perhaps it just needs oil/grease.

Call Yaesu and talk to the technicians - they are very helpful. I am
sure they will have a replacement, if that fan is beyond repair.

Good Luck
